RE: Southern California Gas Storage Enhancement Project

Dear Chair Hartmann and Commissioners:

On June 5, 2013, the County Planning Commission is scheduled to consider the Southern California Gas Storage Enhancement Project (Project). The Project is located in close proximity to Goleta residents at the Rancho Goleta Lakeside Mobile Home Park at 945 Ward Drive. The existing Southern California Gas Company's gas storage facility has generated a history of noise, vibration, and safety concerns to the residents. The mobile home park residents also are on record via public comment letters and testimony stating opposition against the proposed Project.

The purpose of this letter is to request that you spend whatever time is necessary at the public hearing to listen to testimony from our residents, understand the nature of their issues both with the existing facility and with the proposed Project, and take any proactive steps that are within your purview to address their concerns.

The City appreciates your attention to this important matter. Should you have any questions, please feel free to contact me at 961-7538 or Anne Wells, Advance Planning Manager, at 961-7500.

Sincerely,

Roger Aceves  
Mayor

cc. Doreen Farr, 3<sup>rd</sup> District Supervisor

Samuel Villalobos, Board Assistant Supervisor

Dear Mr. Villalobos,

My husband and I have lived in Rancho Goleta Mobile Home Park for 5 years. It is a beautiful setting near Goleta Slough and Beach. We often ride our bikes on the Obern Bike Trail. Even with the presence of the airport and Rte 217, we find it quiet enough to enjoy a pristine slice of nature here in Goleta. However, this will all change if you grant SoCal Gas permission to drill for natural gas and expand its gas storage field.

I have read the Revised EIR and the FEIR. The information is technical, specific, and offered in terms to assure you (and us) that SoCal Gas will operate within certain thresholds of such important factors as air quality, visual impact, noise pollution, and hazardous waste containment and disposal. To me none of these figures are based in reality because no gas drilling has ever occurred at this site.

My reality is that I will live next door to a construction site that will be noisy and dusty, and since the winds blow from offshore, I will hear it. I also know that wildlife and birds are even more sensitive to sound and earth disturbances than most humans. I quote from 4.4-2 from the FEIR "Because of previous disturbance, no special status plants are known or expected to occur in the area of these sites." 4.4-4 "Temporary and permanent impacts to nesting and foraging habitat of those (bird) species may occur during construction and operation of the new facilities. These impacts would be potentially significant. However, due to ... (2) the disturbed nature of the site...temporary and permanent impacts...would be reduced to less than significant impact." My reality is that the site has already been disturbed and therefore it's okay for SoCal Gas to disturb it some more.

My reality is that over two consecutive years there will be the construction of 4 directional drilling wells and a dehydration plant in my backyard. Well pad and dehydration plant construction, pipeline installation and drilling will last for a total of 394 days, 89 of those days nonstop drilling during Phase I and 68 days during Phase II. During drilling there will be a 172 foot tower under night lights. Each well will use 30,000 gallons of water during its lifetime. Hazardous waste, i.e. as much as 3,000 lbs of lead, is even now allowable per day on site. More toxic waste will accumulate and be transported on our roads and highways. In approximately five years when natural gas is depleted, the empty reservoir will be filled with up to 3x the storage capacity now at 21.5 billion cubic feet.

My reality is that this is unacceptable. Accidents happen. Human error occurs. The earth moves, witness the 4.6 tremor just days ago. The More Ranch Fault runs along SoCal property and our Park. Pipelines can break and leak. The Project is too close to human and wildlife populations. If Goleta Beach is under renovation at that time, the area will get a double-dose of industrial chaos.

I leave you with three questions:

1. Do any of you live next door to the SoCal Gas facility or any other similar facility?
2. Would you want to live next door?
3. Have you visited an active natural gas drilling site?

Even if it's only on grounds of aesthetics, do not grant permission to SoCal Gas.

Sincerely,

Nancy Elliott  
945 Ward Drive #26  
Santa Barbara, CA 93111

STOP THIS NOW

David Villalobos, Board Assistant Supervisor, Santa Barbara County Planning  
And Development Department, 123 Anapamu Street, Santa Barbara 93101

Dear David Villalobos,

I am opposed to the SoCal Gas Company La Goleta Storage Field Enhancement Project. My objections are based on environmental and human impact: 6-5-13

\*The Goleta Slough is full of shore birds and other wildlife. "Already disturbed" in the FEIR means that SoCal activities have already damaged if not destroyed habitats.

\*Directional drilling across/through the More Ranch Fault can cause earthquakes.

\*Visual impact of the 172 foot drilling rig will negatively affect the aesthetic quality of the area for too long.

\*As much as 3,000 lbs (1.5 tons) of lead, 3,500 gallons of oil/hydrocarbon fluid, 600 lbs of oil/hydrocarbon contaminated soil and other hazardous waste per day will be stored on site. In my estimation SoCal will be allowed to turn its Goleta facility into a toxic waste dump even if some of it is hauled away along Patterson Avenue and Highway 101 to sully some other place.

\*Noise and night lighting during construction and drilling will affect wildlife and SoCal's human neighbors.

\*Nowhere is it mentioned in any of the EIRs how much water will be used from our already drought-stressed water supply. All I've read is that 'usage will be higher' during construction and drilling then standard after that. How much will be used?

\*Some of the residents of Rancho Goleta Mobile Home Park have already experienced compressor vibrations. It's possible that this would occur again with increased frequency and damage.

The constant refrain of LESS THAN SIGNIFICANT is not an acceptable term. All of the details spelled out in the FEIR are based on speculation. Drilling is untried. Accidents happen. Please, for the sake of the Goleta community, the waterways, coastline, UCSB, the land and wildlife, I urge the Santa Barbara Planning Department to vote NO on this project. Sempra Global is committed to renewable energy. Instead of drilling for gas, I suggest that SoCal create a solar farm on its 147 acres.

Sincerely,

*Suzanne Saunders R.N.*

Dear Mr. Villalobos;

S.B. COUNTY  
PLANNING & DEVELOPMENT  
HEARING SUPPORT

I am writing in opposition to SoCal LaGoleta Storage Enhancement Project. I feel the project is not compatible with the area surrounding their facility. I believe, as their graphs show, we at Rancho Goleta are living in a giant hazard zone if any accident should happen...any accident. There are already 20 billion cubic feet of natural gas stored at the facility. That alone is an every day hazard, but compounding this by beginning a natural gas drilling operation and expanding the storage capacity is playing Russian Roulette.

We, and their facility, are in an active earthquake area as reminded this week by the 4.6 quake that shook our area. From a map in the EIR, it appears that the More Mesa Fault is actually along their property near Rancho Goleta. Though it is unproven if drilling near a fault line can cause additional earthquakes, the fear is real. The State of California and the County of Santa Barbara has spent millions of dollars to prepare for the possibility of an earthquake. Understanding the location and the roadways, you realize that there would be little chance of residents and visitors escaping the area if a natural gas disaster occurred.

The EIR states that the chance of an accident at the facility is less than significant but I understand there was an accident at that very site when a crane toppled and a man killed. It wasn't planned, statistically wouldn't happen, but it did. Look at all the accidents that have happened since 2000 in the gas and oil industry in California alone. LaGoleta Storage Facility piping is as old as the piping in the area of San Bruno. We all know what happened there, and that is not the only place where old underground pipes have caused accidents and death.

And, the internet made me aware that SoCal LaGoleta pipe supports along the 217 and Sand Split road were in deplorable condition until this January when SoCal was notified to remove the rotten wooden supports, replace them, and do a soil test to insure that the ground could support the weight of those pipes. Was that soil test done? What was recommended, and has it been done? How can you have faith in SoCal's ability to maintain a safe facility when they allowed those support structures to get in such deplorable condition? Should those pipes fail, one of the two major exits from UCSB will be blocked; and the major exit from Goleta Beach and Recreational Park. Rancho Goleta is within walking distance of the SoCal facility and any accident will effect us.

Southern California Gas should have other, safer, areas in the County where they can tap into the same source of natural gas, creating caverns where gas can then be stored in facilities that can be

designed and monitored by equipment that meets the upcoming government standards that will better protect the environment, the workers, the wildlife, and residents of Santa Barbara County. Just because SoCal has that facility on More Ranch Road which was developed in the 1950s (or 1920's) does not mean they should be given the opportunity to enlarge it in 2013 when the character of the area has dramatically changed since its inception.

I do not feel that there will be substantial long-term benefits to Santa Barbara to warrant destroying our environment, threatening our lives and that of the wildlife. The United States is now the world's largest gas producer. "The boom in domestic production of both oil and natural gas has provided the United States with 84 percent of its energy requirement last year, the highest annual level since 1991" according to the Wall Street Cheat Sheet' and 'now the United States produces more natural gas than it can use." Our government has issued a permit for a facility to be built in Louisiana to export natural gas. Are you willing to destroy our Santa Barbara environment to make additional profits for SoCal Gas company?

Do we need to live in fear of a fatal disaster to increase the profits of the gas industry? Will our use of water be restricted or more costly because of SoCal's drilling? Will transportation of SoCal's toxic wastewater over our limited roadway system cause injury and death to drivers in California? Will drilling 24 hours a day continuously for 3 or more months a year force residents and tourists to flee the area? Will air pollution become so unhealthy that our residents suffer? Will noise pollution be unbearable for residents of Rancho Goleta, UCSB, Goleta Beach and the surrounding area? Has due consideration been given to the danger of an airplane accident at the site of drilling during the most critical time of gas extraction? Is this not something to be considered in light of terrorism? Santa Barbara airport runway is less than a 1/2 mile from the drilling site. The Pacific Ocean and four creeks flow along SoCal's LaGoleta property and any disaster will devastate them.

Allowing SoCal to conduct drilling on this site will bring many dangers to all of us living in this community. Once allowed you cannot put the genie back into the bottle. Consider all the aspects of this project and whether or not the benefits to the community outweigh the risks. Is it profits or people you will choose to protect?

Sincerely,

Madlyn Monchamp

To: Santa Barbara Planning Commission

Re: SoCal Gas Co. La Goleta Storage Field Enhancement Project

Dear Planning Commission members et al

As residents of Anderson lane for 38 years we would like to point out that Patterson Ave. from Ekwill south to the More Ranch Road / Anderson lane Intersection is a TWO LANE road with a deep drainage ditch on one side and a narrow dirt path on the other. This stretch of road is posted 45MPH and much of it ~~is~~ <sup>SHOULD BE</sup> marked with a double-yellow line as there is a long sweeping blind curve. As more and more workers and recreational bicyclists use this corridor we are seeing more dangerous "close calls" all too often.

We see nothing in this final E.I.R. that sufficiently mitigates this growing probability of serious accidents involving trucks and cars harming folks on bicycles or just walking.

Please revisit this problem before it becomes a tradgedy.

Sincerely

Russ and Catherine Salzgeber 1449 Anderson Ln S.B. Ca. 93111 (805) 964-8192

MEETING

DATE: 6-5-13

Dear Mr. Villalobos,

I am opposed to the SoCal Gas Company La Goleta Storage Field Enhancement Project for many reasons:.

1. The area proposed almost sits on top of the Goleta Slough - an important bird & wild life area & SoCal proposes to store contaminated soil & other hazardous waste in close proximity to this fragile environment. How are they going to store this waste without leakage - much less contain it should an earthquake occur? Examples of waste containment sites leaking or flooding into neighboring areas are prevalent throughout the world.
2. In light of the minor earthquake that recently shook this area, I wonder how SoCal can continue to claim that the drilling of 4 new wells will have no impact on the safety of nearby residents especially those of us who live in Rancho Goleta which is within the perimeter of the worst case scenario should an accident occur; ie we are at risk of lethal gas contamination, fire, explosion & death, should a major accident happen. Why is it acceptable for our lives, homes & families to be at risk for the benefit of the profits of a public utility?
3. Why is drilling being proposed 24/7? When are we supposed to sleep? Why aren't there any mitigations for the loss of the quiet enjoyment of our homes for the drilling periods? Obviously, during the constructions periods we will experience a loss of value to our homes should we wish to sell. The noise of construction, the night lighting, the dust, the potential contamination and/or possibility of accidents will all factor into a loss of value for our homes. Why aren't our economic losses factored into the cost of this project?
4. Why are we allowing any drilling for natural gas in an environmentally fragile area to begin with? According to the latest data from the Union of Concerned Scientists, even though using natural gas is cleaner than oil or coal, when you add in the environment impacts of extracting the gas, it pushes it over the edge of being environmentally acceptable. With the melting of the glaciers & the Greenland ice cap contributing to the eight inch rise in sea level along the Florida coast, we should not be drilling for more global warming energy sources but should be concentrating on conservation, energy efficiency, & using local roof-top solar.

I urge you to deny the permit changes that would allow for drilling on this fragile coastal property.

Cordially,

Kristine Ollickala

MEETING

DATE: 6-5-13

Dear Mr Villalobos,

As a concerned resident of Santa Barbara, I urge you stop proposed natural gas drilling in Goleta. To directionally drill 4 natural gas wells aging Goleta gas storage facility on the California coast is a mistake. The drilling locations are in close proximity to a wildlife rich tidal slough, 200 space mobile home park, major airport, recreational beach and state university (UCSB). SoCal Gas has already paid for structural supports for two homes in the park due to gas compressor vibrations. What could happen during and after drilling? A LOT. Its not a matter of IF a leak occurs or a malfunction, it's a matter of when **and** we do not have any safe way to clean up spills. I urge you to protect the residents and fragile environment along the Goleta coastline from natural gas drilling and gas storage expansion by the SoCal Gas Company.

Respectfully,

Grace Feldmann

Cecilia,  
I am out of California but this is my reply to the FEIR on SoCal LaGoleta Project. I am hoping that the request is denied.

Cc: Stakeholders.

Re: SoCal Gas Co La Goleta Storage Field Enhancement Project.

Dear Planning Commission members and Stakeholders,

Thank you all for all your efforts.

After reading (in the Final EIR) the response to the comments I submitted for the first and second draft EIRs, I'm left with the conclusion that my concern is still not understood in its entirety, and so remains unaddressed. The addition to the "traffic management plan" is in the right direction.

What we have – still – is the unintentional creation of an extremely hazardous situation regarding bicycle and pedestrian traffic and farm equipment (including circulation and current use of road), which is not yet addressed sufficiently to mitigate the problem.

Since I submitted my previous comments, I noticed that the section of the roadway I'm concerned about is two lanes, while its "level of service" designation is based on four lanes. (Please see attached.)

Also, it occurs to me that the agricultural workers use bicycles as a condition of their employment. These are the Givens Farm workers who routinely travel between fields in three separate locations. This means that these bicycles are de facto "farm equipment."

The situation I see arising poses a new and extreme risk for certain cyclists and pedestrians. This risk is not yet analyzed in a relevant way, because it involves the overlap - not the difference - of current conditions (and behaviors) with the impacts of increase in types of vehicles and trips to and from the project.

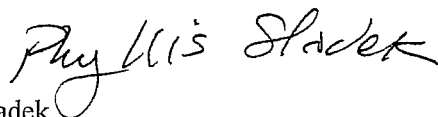

I find in the (final EIR) response to my comments, the authors' reply took part of one of my sentences out of context. This left me feeling confused, as this response might be interpreted as minimizing or diverting from my point. Also, the suggestion by the authors to contact the traffic division similarly does not take into account the many factors I describe and the disproportionate and immediate impacts of the project, due precisely to the nature of the factors.

So, I'd like to clarify my overall intent. I bring up this situation of bicycle use as part of employment, bicycle use for transportation, and pedestrian traffic through the South Patterson/Shoreline, More Ranch Road, Anderson Lane intersection (and the S. Patterson-Shoreline road itself) in order to address a situation that looks to me to be potentially quite dangerous for the people directly involved.

Also, I'd like to again ask the La Goleta project managers and members of the Planning Department and the Planning Commission to please do a site visit to the S. Patterson/Shoreline/More Ranch Rd/Anderson Lane intersection, and to attempt to cycle into this interchange from Anderson Lane. Please. This may be the only way to understand the enormity of the situation – for these few people impacted.

I'd like to bring up facts, questions and comments related to my concerns. I'll put them below.

Sincerely,

Phyllis Sladek

1185 Anderson Lane, G, Santa Barbara, CA 93111. (805) 964-5748. (Message phone.)

Attachment A.

To: SB County Planning Commission From: Sladek

June 1, 2013.

Questions and concerns in more detail.

Re: Section 4.15-1.

Table 4.15-1. 2005 Caltrans Average Annual Daily Traffic.

Question. It appears the counts begin at Junction SR-17- 217 south. This junction may or may not include the Patterson junction (off-ramp?). (There are two junctions located in that section of freeway/101 interchange – the 217 exist and the Patterson exit both north and south). Only the SR-217 junction is named as such. Should this count be interpreted as including US101-Patterson?

Re: Table 4.15-2. Does list Peak PM Traffic volumes for “Patterson south of US 101 interchange.”

Re: Table 4.15-4 Arterial Roadway Level of Service Designations.

Questions. South of the Goleta Valley Cottage Hospital (GVHC) and prior to the bike path crossing, “Patterson South of US 101 Interchange” becomes 2 lanes. It is no longer 4 lanes. (It remains 2 lanes, including as it becomes Shoreline.)

1. Does the fact that the South Patterson is two lanes from this point on, including the Shoreline Drive section, mean that the LOS designation listed does not apply to this section of the road?
2. What is the appropriate LOS designation for this section of the roadway?

Background:

The third listing in Table 4.15-4 is “Segment: Patterson South of the US 101 Interchange.” Entries are:

- 1) Roadway classification: Primary 2.
- 2) **# of Lanes: 4.**
- 3) ADT Threshold for LOS C: 34,000.
- 4) Existing ADT: Daily: 25,480; PM: 2,548.
- 5) Under Threshold: Yes.

Features of the roadway:

1. Lack of sidewalks or walkways. In addition, (as noted in my previous comments to the draft EIRs), this 2-lane section of South Patterson (past GVCH) has no sidewalks on either side, except for a raised sidewalk on the bridge over Atascadero Creek; that short sidewalk is only on one side of the bridge.
2. In addition, there is no paved shoulder on this section of “Patterson South of US101 Interchange.” In addition, the areas near the road that one might consider shoulder are varied and include slopes, possible drop-offs, uneven ground, gravel, etc. These surfaces are not

conducive to cycling and are hazardous for cycling. In addition, they do not allow cyclists to safely undertake “evasive action” as recommended by the DMV.

3. These features matter because of the nature of “farm equipment” use in this area, please see below for detail.

Re: Section 4.15.2 “Environmental Thresholds.”

Section a.

Question: If the LOS designation (above) is inaccurate for the **2-lane** South Patterson/Shoreline segment of the road, what is the implication for the analysis?

Section b.

Comment: This sentence is about project access that “would require a driveway that would create an unsafe situation, or, would require a new traffic signal or major revisions to an existing traffic signal.”

From my point of view as a cyclist, I find the EIR does not reflect a thorough analysis of the intersection of South Patterson/Shoreline, and the two one-lane roads, More Ranch Rd. and Anderson Lane and its current use by employees who must cycle. (See below for “farm equipment”: bicycles.)

Intersection: These two one-lane roads have stop signs. They enter into South Patterson/Shoreline at right angles to each other. The South Patterson/Shoreline road has no stop sign, no slowing sign and a posted 45MPH speed limit. It also is constructed on a curve. This amounts to a three-way intersection, with two different types of roads (two one-lane roads with 2-way traffic, one two-lane road), and differing road features, speed limits and conditions.

The Shoreline/S. Patterson vehicular traffic routinely flows at, near or (often) above the posted speed limit of 45 MPH.

The majority of bicycle traffic moves at very slow speed. (Same - for pedestrian traffic.)

1. This intersection is already unsafe. (Please see my comments to 1<sup>st</sup> and 2<sup>nd</sup> Draft EIRs.) There is no “signal” or “revisions” or “driveway” – however, the *current* configuration is unsafe. By this I mean that current (motorized) vehicles routinely make illegal moves to avoid cyclists. (Please see below.)

2. The “non-peak hours” mitigation does not address the issue of cycling because the main use of bicycles as farm equipment occurs during non-peak hours.

A possible mitigation is to lower the speed limit on South Patterson/Shoreline to something like 10 MPH.

- c. The “design features” of this South Patterson/Shoreline/More Ranch Road/Anderson interchange have many of the characteristics listed under “c.”

The issue becomes one of determining to what extent these design features “count.” In other words: there is, for example, “narrow width.” There are road side ditches.

Most importantly, the current use of bicycles by agricultural workers is a condition of their employment. As far as I can tell, the Givens farm workers routinely cycle between three agricultural parcels (Ward, one across Patterson, and Anderson Lane) during any given, (single) work day.

Therefore, this use of equipment should be considered “farm equipment.” It should be given special consideration, because the people who travel in this manner have no choice if they wish to do their jobs.

Question:

Do the planners and the applicant understand what I’m trying to say? Does this make sense to you? Can you see why someone who both observes and experiences “near-misses” as cars, trucks and SUVs encounter cyclists...can you understand how I might be really concerned?

Re: Section 4.15.3 Impact Discussion.

Duration of construction phase.

The first paragraph speaks to the length of the construction period and the addition of new trips per day.

Comment.

The current cyclists (farm workers and others) travel daily, especially on regular workdays. The 394-day construction period is plenty of time for an accident to occur, especially under a situation of increasing “stress” (increase in traffic, new types of vehicles and frequency) to a situation that is already questionable.

Question. “In total, up to 160 new trips per day will occur during construction of the proposed project.”

1. Does the “average of less than 2 daily trips” accurately reflect the anticipated timing of these trips? In other words, do the trips average out as they are taken – or, only as numbers?
2. The type and size of vehicles seems to me to matter a great deal because of the fact that the intersection is already unsafe for bicycle and pedestrian traffic, (if these users attempt to operate in accordance with DMV rules).
3. Also, the type and size of vehicles matters a great deal because of the narrow width of the lanes, the absence of shoulder and the requirement for cyclists to share the lane.
4. The posted speed limit on this section of S.Patterson/Shoreline is 45MPH. This has great safety implications for entering that road via this intersection on foot or bicycle.
5. Re: “Off-peak hours.” This is a complicated issue. My view is more analysis and discussion is required. I feel the main problem is not yet understood.

Here is one aspect of it: Let me try again:

Re: Timing: Cyclists from Givens farm travel to the Anderson lane parcel during non-peak hours, as I understand it. Do we know particulars? (Numbers, routine, etc.?)

Re: In general. In any case:

As one example: Vehicular traffic leaving Orchid Lane has the distance and the time to achieve the posted speed of 45MPH.

A cyclist entering the intersection is required to share the same lane with this vehicle.

If a cyclist successfully enters and heads north (towards Hollister) and if a vehicle approaches - (comes upon a cyclist in the same lane, going the same direction) – and encounters the cyclist while (the driver of the vehicle is going) at the posted speed limit, there are difficulties for the driver of this vehicle: a) sight; (i.e., is there enough time to take action?) and b) what action to take?

At present, the typical strategy of the northbound vehicular traffic is to swerve around a cyclist – NOT to slow down to an extremely slow (1-5MPH?) speed. (Even if they were to do so – would they be able to achieve this?) I have observed this on numerous occasions.

This puts the northbound vehicle directly into the lane – the only lane - of oncoming traffic.

This is “workable” - ? – ONLY under conditions of very low traffic; i.e., only if and when there is no vehicle in the oncoming lane.

An increase of an indeterminate amount of vehicular traffic **greatly and disproportionately** impacts this strategy.

The current drivers of vehicles are used to taking this strategy, which may be basically not legal (DMV).

Faced with vehicles in the oncoming lane, the reflexive action on the part of the driver of a vehicle is to avoid a head-on collision with another vehicle. This would result in hitting the bicycle.

This is a set-up for motor vehicle-cyclist collision.

The strategy also can force the cyclist off the road. There is no paved shoulder.

#### Section 4.15.4

Re: “Although construction activities would result in temporary traffic impacts, following construction traffic will return to baseline conditions.”

Please see above. During the construction phase, we are talking about more than a (cumulative) year of days. These are days that farm workers are compelled to cycle as a condition of their employment. People without cars can only function as pedestrians or cyclists to fulfill their transportation needs.

This is a set-up for something bad to happen.

On page 4.9-29, there is a table called “Comparison of Odds of Fatalities for Various Accidents.”

The first item – and the highest “odds per year” – goes to “motor vehicle.” From what I’ve had time to read up on, “motor vehicle - bicycle” fatalities are a much higher risk for cyclists and should be at the top of that list. The data on pedestrian fatalities is similar and disproportionately high, as far as I can tell.

Section 4.15.5 Mitigation and Residual Impacts.

Comments:

Re: b. Non-peak hours. Please see above.

Re: i. The idea of temporary signage is welcome. However, this does not address – at all – the relative asymmetry in speed limits (South Patterson/Shoreline v. More Ranch Road, Anderson Lane). It does not address the asymmetry between the transportation modes (MV, bicycle pedestrian). This measure (while welcome) does not address the problem with the intersection and the section of road between the intersection and the more northern portion of S. Patterson (i.e., where it becomes four-lane).

Re: j. Safety briefings. This is a great idea. (Attached are some references you might find useful.)

The problem is: the residents who currently operate motor vehicles also need education – and complete re-training - on how to safely share the roadway.

Of course, we also have the topic: Education of cyclists, too? But the problem I see here is that the advice to cyclists to follow DMV regulations amounts to advice to be unsafe, because of the conditions and the behavior of vehicle drivers. Currently, the safest way to cycle in certain situations may be to travel against the traffic (clearly not DMV legal).

The current situation involves people who are used to doing things in a particular way. This way is not in line with DMV rules. The road conditions and speed limits do not support DMV rule-based behavior, either.

The safe and educated drivers on project-related business will still have to interact with the current strategy of the residential drivers. Their actions, however careful, will still affect the residential drivers, cyclists and pedestrians.

In other words, for example: the educated project truck driver will encounter the residential driver of a vehicle used to swerving to avoid a cyclist. His/her very presence may well trigger the accident.

The situation requires more measures to ensure the safety of cyclists, employee-cyclists and pedestrians.

I don’t see how this could be achieved without a drastic reduction in the speed limit on Shoreline/South Patterson, which is currently 45 MPH. We need another look at this whole picture.

The situation requires more thought on the part of the planners and more care to avoid an unnecessary event – a serious injury or worse.

Conclusion: I appeal to the applicant and to the Planning Dept. to please take a collaborative approach and please take the initiative to involve whatever other agencies you suggest (such as “traffic division.”)

Attachment B: To SB County Planning Commission. From Sladek.

References on cycling and safety.

<http://bicycleuniverse.info/transpo/almanac-safety.html>

This site appears to take on the issue of how to analyze risk. Some good info on reporting, etc.

<http://www.bicyclinginfo.org/library/details.cfm?id=3324>

"In 1992, 722 bicyclists were killed in the United States in collisions with motor vehicles, and an estimated 650,000 people were treated in emergency rooms for bicycle-related injuries. It is remarkable that, for a traffic safety problem of this magnitude, so little research has been conducted to establish the causes of these accidents. Instead, design standards for roadways and bicycle facilities, individual project designs, and laws and policies regarding bicycling are based almost entirely on opinion. The quality of the results is highly variable."

<http://bicycledriving.org/about/the-dilemmas-of-bicycle-planning>

"The root of these perceptions is the idea that bicyclists are not really drivers. If bicyclists were drivers (as the law states), then the basic principle of traffic flow applies: first come, first served. If a driver is traveling in the roadway, an approaching driver must overtake only when it is safe. The lead driver has to make it easy for a following driver to overtake, but only to the extent that traffic and road conditions make overtaking possible. A motorist's perception of safe passing space may be different from a cyclist's. **Motorists may not understand that a cyclist should ride in the middle of a narrow travel lane rather than inviting traffic to share a lane that is too narrow to share safely. "**

# Stop Proposed Natural Gas Drilling in Goleta

RECEIVED

By Naneki Elliott (Contact)

MAY 30 2013

To be delivered to: Santa Barbara County Planning Department

S.B. COUNTY  
PLANNING & DEVELOPMENT  
HEARING SUPPORT

## Petition Statement

Tell the Santa Barbara County Planning Department to protect the residents and fragile environment along the Goleta coastline from natural gas drilling and gas storage expansion by the SoCal Gas Company.

## Petition Background

SoCal Gas seeks amendments to the Santa Barbara County Code (Coastal Zoning Ordinance) in order to directionally drill 4 natural gas wells at their aging Goleta gas storage facility on the California coast. The drilling locations are in close proximity to a wildlife rich tidal slough, 200 space mobile home park, major airport, recreational beach and state university (UCSB). SoCal Gas has already paid for structural supports for two homes in the park due to gas compressor vibrations. What could happen during and after drilling?

---

## Santa Barbara County Planning Department

This binder holds over 900 signatures (800 plus from an online petition, 100 from on the ground). 98% are from Santa Barbara and Goleta. These are your constituents. They oppose natural gas drilling and gas storage expansion by the SoCal Gas Company at their Goleta facility.

Please look at these signatures and read the comments. Heed their wishes.

Sincerely,

*Naneki Elliott* June 3, 2013

Please peruse the Policy Guide on Planning for Sustainability (adopted back in 2000!), from the American Planning Association, at <http://www.planning.org/policy/guides/adopted/sustainability.htm>. Specially focus on section III. Policy Positions -- A. GENERAL POLICY OBJECTIVES. I urge you to compare your decisions against the four non-negotiable principles of the sustainability of the relationship biosphere-human societies--which are based on sound science and known to humankind since the 1980s. Do not fail nature and humans in Goleta!

1969 Santa Barbara oil spill From Wikipedia, the free encyclopedia Location: Pacific Ocean; Santa Barbara Channel Date: Main spill January 28 to February 7, 1969; gradually tapering off by April Cause: Well blowout during drilling from offshore oil platform Spill characteristics: Volume 80,000 to 100,000 barrels (13,000 to 16,000 m3) within a 10 day period Shoreline impacted: Southern California - Pismo Beach to the Mexican border, but concentrated near Santa Barbara The Santa Barbara oil spill occurred in January and February 1969 in the Santa Barbara Channel, near the city of Santa Barbara in Southern California. It was the largest oil spill in United States waters at the time, and now ranks third after the 2010 Deepwater Horizon and 1989 Exxon Valdez spills. It remains the largest oil spill to have occurred in the waters off California. The source of the spill was a blow-out on January 28, 1969, 6 miles (10 km) from the coast on Union Oil's Platform A in the Dos Cuadras Offshore Oil Field. Within a ten-day period, an estimated 80,000 to 100,000 barrels (13,000 to 16,000 m3)[1] of crude oil spilled into the Channel and onto the beaches of Santa Barbara County in Southern California, fouling the coastline from Goleta to Ventura as well as the northern shores of the four northern Channel Islands. The spill had a significant impact on marine life in the Channel, killing thousands of sea birds, as well as marine animals such as dolphins, elephant seals, and sea lions. The public outrage engendered by the spill, which received prominent media coverage in the United States, resulted in numerous pieces of environmental legislation within the next several years, legislation that forms the legal and regulatory framework for the modern environmental movement in the U.S.

As a former UCSB student with family living in Goleta, I know that the area for this proposed drilling expansion is sensitive and critical to the area's natural, commercial, and recreational interests. It needs to be preserved and protected from drilling.

California must not put the asset of its beautiful and life sustaining natural environment at risk for the short term gain of oil or natural gas extraction. Conservation, wind and solar must be our path to increased and sustainable energy sources.

Edie Keating  
Palo Alto, CA 94306  
May 19, 2013

---

The stakes are too high. Our natural resources, water and the farming and land in the "Good Land" of Goleta, not to mention the most densely populated square mile west of the Mississippi (Isla Vista and UCSB), packed full of young people, are too precious to risk drilling accidents, spillage, or contamination.

Drilling in Goleta is a bad idea. Not only will it impact the residents who live close to the proposed drill site, but the area is rich in wildlife that will be impacted by drilling. We value our rich wildlife and the slough, beach and parks do not need the negative impact of this awful drilling proposal.

I went to school at UCSB and remember how beautiful the Goleta area is. It's so important that the natural beauty isn't spoiled for everyone so that one company can profit.

Lisa Nicholson  
Santa Rosa, CA 95404  
May 16, 2013

---

The proposed drilling in Goleta is an example of an unsustainable practice. The environmental costs of acquiring this energy far outweigh the benefits. In addition, this drilling in Goleta will set a precedent, making it easier for unscrupulous energy firms to justify exploitation and more widespread destruction of our ecosystem. Further, I am confident that a majority of Santa Barbara residents share my sentiment that energy firms are not properly motivated to maintain safe operating conditions of their equipment, as that would mean further expenditures on the part of the company. In the wake of numerous domestic environmental disasters in the last couple years - indeed months - which were preventable, I am less than reassured that SoCal Gas is capable of pursuing the storage of fuels without incident. In the event of an unfortunate incident, I doubt their willingness to hold themselves accountable for any negative consequences without significant expenditures upon legal proceedings, paid for of course by us, the potential victims of any mishaps. Further, it would be maddeningly irresponsible of the SBCo Planning Department to permit such development in light of recently reported record-high numbers of carbon dioxide existing on our planet. Carbon based fuels are not the answer. Santa Barbara County has been a pioneer in promoting sustainable practices, be it the founding of Earth Day celebrations, solar panels at SBCC, or the "Green" Albertsons in Carpinteria. Permitting this drilling would be morally repugnant and a backward step in the progress we have made locally, and inspired nationally in sustainable energy. Ladies and Gentlemen of the Santa Barbara County Planning and Development department, Santa Barbara begs you to think long and hard about the implications of such work.

---

I am totally opposed to this project because of what could happen during and after drilling. The Goleta coastline is too fragile, and is in fact eroding and falling into the ocean. The beach is shrinking and falling back almost to its parking lot. There is a bike path to UCSB that is threatened. The rich tidal slough where wildlife lives is threatened, as is the road leading to UCSB. There are important projects of the university that are threatened, including part of the Marine Science Institute. The residents, including homes in a trailer park have already received structural supports, paid for by SoCal Gas, because of gas compressor vibrations. The gas storage facility is aging and could easily spring a leak. How could SoCal Gas perpetrate this on our environment and the residents of Santa Barbara County and expect us to continue to use its natural gas in our homes. Frankly, I am seriously thinking of switching to electricity, and solar power when I can afford the installation

I own property in Goleta, rather near to the proposed drilling site. I am very concerned about the negative impact this proposed drilling will have on the health and safety of the area residents and visitors, as well as the area's environment as a whole.

This is outrageous. I recommend everyone signing this petition should also contact the office of any city and county official you can think of to voice your anger. Make your voice heard! Tell them that, if they side with an oil company over the interests of their constituents, you will be going door to door working against them in the next election, and that you will donate money to their rivals.

It was announced this week that atmospheric concentrations of CO2 levels in the atmosphere surpassed the 400 ppm milestone, causing many concerned climate scientist to issue warnings about the likely impacts of global warming. As a coastal community, and as "ground zero" for the environmental movement after the 1969 oil spill, we should be taking a strong leadership position in transforming American energy production to renewable sources. 350.org founder Bill McKibben has said, "The only question now is whether the relentless rise in carbon can be matched by a relentless rise in the activism necessary to stop it." As a community, we must stand opposed to the "easy money" generated by permitting natural gas production on our coastline and champion long-term environmental security for the human race over short-term profits for corporations.

ABSOLUTELY a BAD idea. There are SO many problematic issues but at the top of my concerns -which i believe should be ALL of our concern, is the fact that the product slated for use in the event of a spill -which has been used in the Exxon Valdez spill, and the BP Deepwater horizon spill and is slated for use in ever drilling locale in the United States, is an environmental and health nightmare waiting to happen (and indeed unfolding tragically now for the people of the gulf region and the entire seafood chain there) It is called Corexit. A couple of recent peer reviewed studies, one out of Georgia Tech, another out of Florida State, prove this oil dispersent, supposedly made to clean oil spills up, actually make the oil more than 50 times more toxic than the oil alone...and is devastatingly toxic to sea and human life. The EPA decision to use this product was called into question in 2013 following a report by the Government Accountability Project alleging "devastating long-term effects on human health and the Gulf of Mexico ecosystem" stemming from the use of Corexit.(see wikipedia article on Corexit for original sources) Corexit has been banned for use on oil spills in the UK since 1988.UK authorities have an approved list of products which must pass both "sea/beach" and "rocky shore" laboratory toxicity tests; Corexit did not pass the rocky shore test.The country of Sweden has also banned its use. Bottom line, this will be used here in Goleta too in the event of a spill and that is simply a matter of WHEN it happens, not IF it happens. And I haven't even touched the potential impacts to wildlife, water and humans simply by the drilling-prior to the use of the clean up "dispersant"

There is no solid science behind whether drilling in Goleta is safe or not. Whether what they propose is "fracking" or not, the county needs to wait for the legislation going through the Senate & Assembly to take place before any other action is taken. To move forward and this point is a waste of money because drilling in Goleta might become a moot point.

Dear Mr Villalobos,

As a concerned resident of Santa Barbara, I urge you stop proposed natural gas drilling in Goleta. To directionally drill 4 natural gas wells aging Goleta gas storage facility on the California coast is a mistake. The drilling locations are in close proximity to a wildlife rich tidal slough, 200 space mobile home park, major airport, recreational beach and state university (UCSB). SoCal Gas has already paid for structural supports for two homes in the park due to gas compressor vibrations. What could happen during and after drilling? A LOT. Its not a matter of IF a leak occurs or a malfunction, it's a matter of when and we do not have any safe way to clean up spills. I urge you to protect the residents and fragile environment along the Goleta coastline from natural gas drilling and gas storage expansion by the SoCal Gas Company.

Respectfully,

Grace Feldmann

**Categories:** Purple Category

Dear Mr. Villalobos,

I am a resident of Goleta, and I want to voice my opposition to the SoCal Gas Enhancement Project. I am worried that the project will have negative environmental consequences both for residents as well as for the rich plant and animal life that we are so lucky to have in our town. I urge you not to continue with this project.

Best,  
Matthew Tucker-Simmons

APPROPRIATE  
ITEM # 3  
MEETING  
DATE: 6-5-13

Hi there,

I'm opposed to any new drilling. Our current levels of consumption of energy are already far too high and arguments about energy demands are not compatible with actual energy needs. People do not "need" several cars, flat screen TVs, new phones, a new pair of shoes every month, and so on. These assumptions are what the energy industry bases their demands on. This is not a sustainable culture, let alone way to use the energy which we do actually need.

The US uses 25% of the entire world's energy. That is morally wrong.

It is absurd to think that continued drilling is permissible because there is a demand. If the tobacco industry proposed to take a bunch of land for growth of tobacco because of growing California demand the county would laugh hysterically - why allow profits to increase at the public's expense? Absurd! Yes, our energy needs are also absurd. Please do not let them drill. It is absurd.

<http://www.youtube.com/watch?v=IsIfokifwSo>

Thanks.

## La Goleta Gas Storage Questions Answered

By Matt Kettmann ( Contact )

Southern California Gas Company Officials Detail Elements of Expansion Project

RECEIVED

MAY 23 2013

S.B. COUNTY  
PLANNING & DEVELOPMENT  
HEARING SUPPORT

Thursday, May 23, 2013

By Matt Kettmann (Contact )

The Southern California Gas Company would like to add a few billion more cubic feet to its La Goleta Gas Storage Field, a reservoir in use since 1941 that already holds 21.5 billion cubic feet of natural gas and is located between Atascadero Creek and Goleta Beach near More Mesa and the Santa Barbara Airport. Along the way, the company hopes to extract one to five billion cubic feet of previously untapped natural gas as well.

All this and more is detailed in a feature story here. But for those who are seeking more details, what follows is a Q&A that was conducted last month via email with Denise King, the Gas Company's spokesperson.

**La Goleta is one of a handful of storage facilities located around the southern half of the state. Can you explain why these are critical parts of the energy infrastructure?**

Southern California Gas Co. (SoCalGas) delivers on average 2.8 billion cubic feet of natural gas daily to nearly 5.8 million customers (representing 20.9 million consumers) throughout central and Southern California. More than 80 percent of the natural gas consumed by our customers is transported into California from out of state, with about 20 percent of the natural gas supply purchased from in-state suppliers. Our pipeline system has the capacity to receive 3.7 billion cubic feet of natural gas per day, but often the amount is much less.

On a cold winter day, natural gas consumption can peak at 5 billion cubic feet per day or more (our record delivery was 5.3 billion cubic feet in a single day in 1991.) During these periods of high demand for natural gas, our pipeline system alone cannot serve the entire customer load. And, when out of state pipelines can't deliver enough natural gas to meet heavy demand, which might occur on a cold winter day, we must withdraw natural gas stored underground to supplement pipeline supplies.

**Historically, how did this site become a storage area?**

The La Goleta underground storage field was originally discovered by the General Petroleum Corporation in 1929 (predecessor to Mobil Oil) while drilling for oil. After five years and drilling six wells with no oil found, the oil companies lost interest in the field, but the operator turned to the sale of natural gas.

The first natural gas deliveries from the La Goleta Field were made in 1931 to the Southern Counties Gas Co. From 1931 until the fall of 1941, 15.3 billion cubic feet of natural gas was produced. In the summer of

1939, a small compressor station was constructed and test gas was injected into the underground reservoir. The tests showed the reservoir sand was permeable enough to permit the successful injection of natural gas.

Southern Counties Gas Co. then purchased the surface and mineral rights and built the permanent compressor station by 1941.

**Is strategically located? Or more of a historical accident that it came to be here?**

The La Goleta storage field is strategically located. It serves to balance the coastal natural gas demand from West Los Angeles (Woodland Hills/ Simi Valley) to San Luis Obispo and is a receptor for coastal natural gas production (both onshore and offshore). It also serves to help meet the instantaneous demand of high power plant load. All of the storage fields are depleted oil and gas fields. La Goleta field was a producing gas field and due to the integrity of the field to hold natural gas and the support it provides on the northern end of the transmission pipeline system, it was tested and placed in service.

**Why is now the time to extract virgin gas and expand storage at the facility? How long has this plan been in the works?**

This plan was conceptualized and presented to the California Public Utilities Commission (CPUC) for review and approval as a part of the Native Gas Decision. The CPUC approved the plan in 2006. The opportunity to extract native gas and increase the storage capacity was put in place to provide native gas to local residents as well as support growth and demand for natural gas supplies.

**How does the benefit the average ratepayer?**

The CPUC Native Gas Decision provided a sharing mechanism that would provide a 50/50 split of revenues once the project costs are covered. Ratepayers — our customers — will receive 50 percent of the revenue from the natural gas produced, which will go to help reduce rates. The added storage created will be sold to third parties on an annual or seasonal basis and the proceeds will go to help moderate rates for our customers.

**Is there anything to be concerned about related to public safety with this project? Any foreseeable harm to neighbors/beach-goers/etc., or worst case scenarios?**

The safety of our customers, employees, and the communities we serve is our top priority. A complete and independent quantitative risk assessment (QRA) was conducted for this project by the County of Santa Barbara through the environmental review process. The QRA identified and evaluated worst case scenarios and determined that events large enough to impact neighbors or the public are very unlikely to occur. The risk was determined to be less than significant.

**In 1994, a few Rancho Goleta residents recall a loud noise like a “jet engine” and a “hazy plume” shooting 200 feet into the air. Some evacuated the park. They never heard an explanation. Any idea what that event may have been?**

We do not recall an unusual plant operation. We are required by the CPUC to test our emergency shutdown system periodically. More than likely that is what occurred. Two of our supervisors here were working at the plant in 1994 and don't remember anything unusual that could fit the event described.

**People point to the bubbles that are in Atascadero Creek and wonder if they are at all related to the storage reservoirs. Are they?**

No. Lab tests have shown it to be a different composition than the natural gas in our reservoir.

**There is still no fracking proposed for this project, correct?**

Fracking was never planned as a part of this project, and SoCalGas has committed in writing that fracking will not occur in the future.

**What type of gas extraction technique will be used?**

Gas will flow through a dehydration facility and into a low pressure pipeline system. No artificial lift will be needed since the wells should flow without assistance.

**There are concerns that the site relies on old pipes and infrastructure. Is that a valid concern? Are there any plans to upgrade the site at all?**

The CPUC takes numerous steps to ensure public safety in the immediate and longer term. The CPUC regularly performs physical inspections, and audits operating/inspection practices and procedures developed by SoCalGas. An annual CPUC audit is performed each year. In addition, the California State Division of Oil, Gas, and Geothermal Resources (DOGGR) provides direction and oversight with respect to the field gathering lines and well design, as well as drilling and completion processes. SoCalGas is confident the field is operating in a safe and reliable manner.

**The project explains that the production is expected to take five years, if the new wells are successful, but that it would be allowed to go on until the gas is properly depleted. That has some residents worried. Could the production go on forever if the gas was there?**

No, the reservoir is limited in size, as gas is produced from the reservoir the pressure will be reduced. Once the pressure drops to the approximate low pressure pipeline pressure, the gas will not flow from the well and the wells will be converted to storage operations.

**What's the dehydration plant like? Loud, large, or?**

It is relatively quiet. There are no large engines or compressors. Pumps, fans, and the sound of gas passing through pipe, fittings, and vessels may be heard. The new dehydration plant will be much smaller than the current plant. The new plant is sized for 20 million cubic feet per day of natural gas (MMCFD), while the current plant has a capacity of 420 MMCFD.

**I read a document from last year related to a new agreement with State Lands that appeared to be about rent of the resource and payments related to natural gas that SoCal Gas extracts due to "drainage." Can you explain that more, and how drainage is tracked?**

There is a portion of the field that is operated under a lease agreement with the California State Lands Commission (CSLC). The lease payments are based on the percentage of land held by the CSLC with respect to the entire reservoir. CSLC receives a royalty based on the natural gas withdrawn from the field as well as gas injected into the field. The gas is measured in and out of the field and revenues are calculated

and paid.

**Has the airport expressed any concerns over the height of the tower?**

No, however they do have procedures in place that must be followed to address this issue. Because of our close proximity, we routinely work with airport personnel whenever we use tall equipment (rigs, cranes, etc.) on the property. Specifically for this project, the required information and documentation has been submitted to the FAA, and the required mitigations are included in the environmental document. It's also worth noting that the height of the rig is significantly lower than the height of the existing fixed radio tower antennas on the property.

**Regarding the reported vibrations of some neighbors, SoCal Gas has added bracing to a few homes in the mobile home park. Is it true those are caused by the compressors?**

Yes, SoCalGas has installed foundation support structures to address subtle vibration issues caused by our compressors.

**Are those fixes handled on a complaint-driven basis?**

We are committed to being good neighbors, and have worked closely to address these issues with those neighbors who have contacted us.

**Is anything being done in this project to address those compressors? Which is to say, will the proposed project increase or decrease the compressor-related shaking?**

The proposed project will have no impact on the current operation of the compressors and the associated vibration. Compression will not be required to inject gas into the new storage reservoir. The reservoir will operate below the high pressure transmission system and therefore gas will be injected directly from the pipeline.

**From my reading, the compressors will not be used as part of the future storage. Is that correct?**

That is correct. The proposed new storage zone will operate between the low pressure pipeline system and the high pressure pipeline system at a lower pressure than the existing storage zone. This will allow natural gas to be withdrawn into the low pressure system and placed into storage directly from the existing high pressure pipeline system without compression.

**Will the lighting on the drill rigs, which I understand will be operating 24/7, illuminate the mobile home park?**

Drill rig lighting will likely be visible from certain areas within the park. However, due to the significant distance and the screening from vegetation/trees on the SoCalGas property, we do not expect any impacts to the park from illumination.

Dear Mr. Villalobos:

I write to express my grave concern at the proposed drilling and expansion of storage facilities next door to the mobile home park where I live.

I believe we will experience ongoing noise and possibly air pollution; I'm concerned that slant drilling may take them under our property. I am more than a little concerned that the value of our property and homes will be greatly diminished by their expansion. I'm greatly fear the danger from a massive explosion. My home, in particular, is sited within the circled "red zone" of likely to be greatly damaged/demolished.

I will try to attend the Public Meeting on Wednesday, June 5th, but I'm not always in a physical condition to attend such a gathering due to some changes in lifestyle necessitated by the normal aging process and the fact that I have Lupus.

I subsist on Social Security for my income. About four years ago, I was "taken" by a very clever con man, who misspent nearly all of my retirement nest egg of \$400,000. Though I recovered some of my savings as a result of a lawsuit and returning to work for a while, I am no longer sure I will always be able to remain self-sufficient.

Therefore, any diminution in property values would be a further blow to my already thready financial situation. Though I planned well for my retirement, I (along with several others) was taken in by a slick "financial counselor" and am very concerned that the money I have been able to rebuild will be insufficient to sustain me as I age. Like most of us, I would never want to become a burden to my children.

RECEIVED

Thank you for considering voting NO on the Southern California Gas expansion project.

MAY 17 2013

Sincerely yours,
