Hi Supervisor Hart and Supervisor Williams,

I am a resident of Santa Barbara County and am emailing you to express my support of the proposed SM levee trail expansion to Guadalupe.

I believe this is an important and exciting opportunity to invest in the Santa Maria community by creating spaces for folks to walk, bike, and run with their family and friends.

As you may be aware, Santa Maria only has access to 8 miles of trails across two options, while Santa Barbara has over 130 miles of trails across 52 options. As the biggest city in the county with majority working class BIPOC residents, Santa Maria deserves better. As someone who uses and benefits from the many trails in Santa Barbara, I understand how important they are for creating recreation and community-building opportunities. It's vital that all Santa Barbara County residents have access to outdoor spaces and trails.

At its core, this proposal is an issue of environmental justice. Too often, communities of color receive disproportionate investment resulting in less access to green spaces. Extending the trail is an opportunity to remedy this issue and double the access to trails. I strongly urge you to advocate for the health of families in Santa Maria.

Sincerely,

Alina Werth

City of Santa Barbara

Good Afternoon,

I would like to submit the attached letters for public comment regarding the proposed expansion of the Santa Maria Levee Trail. The group of files are too large to send all together. This is email 1 of 2.

Thank you,

**Lacy Litten**

The Honorable Chair Hartmann  
Santa Barbara County Board of Supervisors  
105 East Anapamu Street  
Santa Barbara, CA 93101

Re: The Tom Urbanske "Santa Maria Levee" Trail Extension

Chair Hartmann and Board Members,

The vibrant communities of Santa Maria and Guadalupe are home to our county's largest agricultural producers, with a population of roughly 120,000 residents, many of whom are agricultural workers. Our community not only prides itself on our rich agricultural heritage, but also on the expansive open and recreational space it offers citizens. The proposed extension of the Santa Maria Levee Trail, however, has not adequately considered the impact to both the population it is intended for, or the unintended consequences to agricultural producers in the valley.

If the current and anticipated extension serves 1,000 people, then only one percent (1%) of the combined community's population would access this space. There are more compelling recreational options to serve these communities, aside from expanding the existing trail.

Additionally, all farms adjacent to the southern levee will likely have to buffer a minimum one hundred feet for food safety and pesticide application purposes. Along the nearly seven-mile stretch, there will be almost one hundred acres of prime farm ground lost due to the required buffer zone. If that ground is taken out of strawberry production, (which brings a gross revenue of about eight million dollars, 40% of which are in wages), then over three million dollars, *annually*, will be taken out of the hands of our agricultural workforce, directly affecting their livelihood.

Extending the levee trail would also significantly impact local growers. Farmers growing crops near the existing trailhead at Blosser Road constantly deal with issues of theft, vandalism, trespassing, litter, unauthorized use of portable toilets, dogs roaming off leash, canine fecal matter, increased homeless presence, and drug paraphernalia. Not only do these hazards pose significant risks to the safety, security, and health of the crops produced, but also the safety, security, and health of the employees who work in the remote area of the proposed trail.

Considering the examples above are actual issues currently being faced by farmers near the existing trailhead, one could argue that these issues are reasonably foreseeable hazards. Per the federal Food

Safety Modernization Act ("FSMA") signed into law by President Obama in 2011, farmers are required to mitigate reasonably foreseeable hazards. Extending the trail will increase food safety and employee safety risks for all farmers and farmworkers along the levee down to Main Street and from Blosser Road to Peralta Street.

We support the county's effort to increase recreational trail use and alternate transportation plans, however we oppose an extension of the Santa Maria Levee Trail. Not only would it financially hurt local farmworkers and their families, but it would put an undue financial burden on agricultural growers to support federal legal compliance and safety measures. We encourage you to oppose extending the levee trail as a measure of prevention for the safety of our crops, our employees, and consumers worldwide who entrust us to provide them with safe, wholesome, and nutritious fruits and vegetables.

Respectfully,

Lacy Litten

Not only do these hazards pose significant risks to the safety, security, and health of the crops produced, but also the safety, security, and health of the employees who work in the remote area of the proposed trail.

Considering the examples above are actual issues currently being faced by farmers near the existing trailhead, one could argue that these issues are reasonably foreseeable hazards. Per the federal Food Safety Modernization Act ("FSMA") signed into law by President Obama in 2011, farmers are required to mitigate reasonably foreseeable hazards. Extending the trail will increase food safety and employee safety risks for all farmers and farmworkers along the levee down to Main Street and from Blosser Road to Peralta Street.

We support the county's effort to increase recreational trail use and alternate transportation plans, however we oppose an extension of the Santa Maria Levee Trail. Not only would it financially hurt local farmworkers and their families, but it would put an undue financial burden on agricultural growers to support federal legal compliance and safety measures. We encourage you to oppose extending the levee trail as a measure of prevention for the safety of our crops, our employees, and consumers worldwide who entrust us to provide them with safe, wholesome, and nutritious fruits and vegetables.

Respectfully,

  
Jacqueline Melone

The Honorable Santa Barbara County Board of Supervisors,

The vibrant communities of Santa Maria and Guadalupe are home to our county's largest agricultural producers, with a population of roughly 120,000 residents, most of whom are agricultural workers. Our community not only prides itself on our rich agricultural heritage, but also on the expansive open and recreational space it offers citizens. The proposed extension of the Santa Maria Levee Trail, however, has not adequately considered the impact to both the population it is intended for, or the unintended consequences to agricultural producers in the valley.

If the current and anticipated extension serves 1,000 people, then only one quarter (¼) of 1% of the combined community's population would access this space. There are more compelling recreational options to serve these communities, aside from expanding the existing trail.

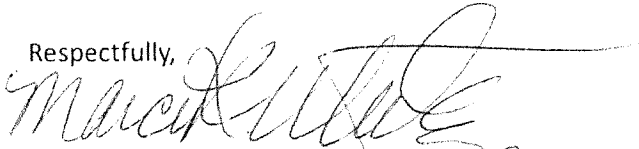

Additionally, all farms adjacent to the southern levee will likely have to buffer a minimum one hundred feet for food safety and pesticide application purposes. Along the nearly seven mile stretch, there will be almost one hundred acres of prime farm ground lost due to the required buffer zone. If that ground is taken out of strawberry production, (which brings a gross revenue of about eight million dollars, 40% of which are in wages), then over three million dollars, *annually*, will be taken out of the hands of our agricultural workforce, directly affecting their livelihood.

Extending the levee trail would also significantly impact local growers. Farmers growing crops near the existing trailhead at Blosser Road constantly deal with issues of theft, vandalism, trespassing, litter, unauthorized use of portable toilets, dogs roaming off leash, canine fecal matter, increased homeless presence, and drug paraphernalia. Not only do these hazards pose significant risks to the safety, security, and health of the crops produced, but also the safety, security, and health of the employees who work in the remote area of the proposed trail.

Considering the examples above are actual issues currently being faced by farmers near the existing trailhead, one could argue that these issues are reasonably foreseeable hazards. Additionally, all farms adjacent to the southern levee will likely have to buffer a minimum one hundred feet for food safety and pesticide application purposes. Along the nearly seven mile stretch, there will be almost one hundred acres of prime farm ground lost due to the required buffer zone. If that ground is taken out of strawberry production, (which brings a gross revenue of about eight million dollars, 40% of which are in wages), then over three million dollars, *annually*, will be taken out of the hands of our agricultural workforce, directly affecting their livelihood.

Extending the levee trail would also significantly impact local growers. Farmers growing crops near the existing trailhead at Blosser Road constantly deal with issues of theft, vandalism, trespassing, litter, unauthorized use of portable toilets, dogs roaming off leash, canine fecal matter, increased homeless presence, and drug paraphernalia. Not only do these hazards pose significant risks to the safety, security, and health of the crops produced, but also the safety, security, and health of the employees who work in the remote area of the proposed trail.

Considering the examples above are actual issues currently being faced by farmers near the existing trailhead, one could argue that these issues are reasonably foreseeable hazards. Per the federal Food Safety Modernization Act ("FSMA") signed into law by President Obama in 2011, farmers are required to mitigate reasonably foreseeable hazards. Extending the trail will increase food safety and employee safety risks for all farmers and farmworkers along the levee down to Main Street and from Blosser Road to Peralta Street.

We support the county's effort to increase recreational trail use and alternate transportation plans, however we oppose an extension of the Santa Maria Levee Trail. Not only would it financially hurt local farmworkers and their families, but it would put an undue financial burden on agricultural growers to support federal legal compliance and safety measures. We encourage you to oppose extending the levee trail as a measure of prevention for the safety of our crops, our employees, and consumers worldwide who entrust us to provide them with safe, wholesome, and nutritious fruits and vegetables.

Respectfully,

GRACE HANDELLEN 1513 E. LEMON, LOMPOC

The Honorable Santa Barbara County Board of Supervisors,

The vibrant communities of Santa Maria and Guadalupe are home to our county's largest agricultural producers, with a population of roughly 120,000 residents, most of whom are agricultural workers. Our community not only prides itself on our rich agricultural heritage, but also on the expansive open and recreational space it offers citizens. The proposed extension of the Santa Maria Levee Trail, however, has not adequately considered the impact to both the population it is intended for, or the unintended consequences to agricultural producers in the valley.

If the current and anticipated extension serves 1,000 people, then only one quarter ( $\frac{1}{4}$ ) of 1% of the combined community's population would access this space. There are more compelling recreational options to serve these communities, aside from expanding the existing trail.

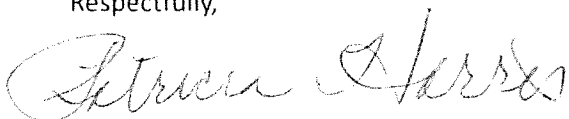

Additionally, all farms adjacent to the southern levee will likely have to buffer a minimum one hundred feet for food safety and pesticide application purposes. Along the nearly seven mile stretch, there will be almost one hundred acres of prime farm ground lost due to the required buffer zone. If that ground is taken out of strawberry production, (which brings a gross revenue of about eight million dollars, 40% of which are in wages), then over three million dollars, *annually*, will be taken out of the hands of our agricultural workforce, directly affecting their livelihood.

Extending the levee trail would also significantly impact local growers. Farmers growing crops near the existing trailhead at Blosser Road constantly deal with issues of theft, vandalism, trespassing, litter, unauthorized use of portable toilets, dogs roaming off leash, canine fecal matter, increased homeless presence, and drug paraphernalia. Not only do these hazards pose significant risks to the safety, security, and health of the crops produced, but also the safety, security, and health of the employees who work in the remote area of the proposed trail.

Farmers growing crops near the existing trailhead at Blosser Road constantly deal with issues of theft, vandalism, trespassing, litter, unauthorized use of portable toilets, dogs roaming off leash, canine fecal matter, increased homeless presence, and drug paraphernalia. Not only do these hazards pose significant risks to the safety, security, and health of the crops produced, but also the safety, security, and health of the employees who work in the remote area of the proposed trail.

Considering the examples above are actual issues currently being faced by farmers near the existing trailhead, one could argue that these issues are reasonably foreseeable hazards. Per the federal Food Safety Modernization Act ("FSMA") signed into law by President Obama in 2011, farmers are required to mitigate reasonably foreseeable hazards. Extending the trail will increase food safety and employee safety risks for all farmers and farmworkers along the levee down to Main Street and from Blosser Road to Peralta Street.

We support the county's effort to increase recreational trail use and alternate transportation plans, however we oppose an extension of the Santa Maria Levee Trail. Not only would it financially hurt local farmworkers and their families, but it would put an undue financial burden on agricultural growers to support federal legal compliance and safety measures. We encourage you to oppose extending the levee trail as a measure of prevention for the safety of our crops, our employees, and consumers worldwide who entrust us to provide them with safe, wholesome, and nutritious fruits and vegetables.

Respectfully, JIM WORTHEN

The Honorable Santa Barbara County Board of Supervisors,

The vibrant communities of Santa Maria and Guadalupe are home to our county's largest agricultural producers, with a population of roughly 120,000 residents, many of whom are agricultural workers. Our community not only prides itself on our rich agricultural heritage, but also on the expansive open and recreational space it offers citizens. The proposed extension of the Santa Maria Levee Trail, however, has not adequately considered the impact to both the population it is intended for, or the unintended consequences to agricultural producers in the valley.

If the current and anticipated extension serves 1,000 people, then only one percent (1%) of the combined community's population would access this space. There are more compelling recreational options to serve these communities, aside from expanding the existing trail.

Additionally, all farms adjacent to the southern levee will likely have to buffer a minimum one hundred feet for food safety and pesticide application purposes. Along the nearly seven mile stretch, there will be almost one hundred acres of prime farm ground lost due to the required buffer zone. If that ground is taken out of strawberry production, (which brings a gross revenue of about eight million dollars, 40% of which are in wages), then over three million dollars, *annually*, will be taken out of the hands of our agricultural workforce, directly affecting their livelihood.

Extending the levee trail would also significantly impact local growers. Farmers growing crops near the existing trailhead at Blosser Road constantly deal with issues of theft, vandalism, trespassing, litter, unauthorized use of portable toilets, dogs roaming off leash, canine fecal matter, increased homeless presence, and drug paraphernalia. Not only do these hazards pose significant risks to the safety, security, and health of the crops produced, but also the safety, security, and health of the employees who work in the remote area of the proposed trail.

If the current and anticipated extension serves 1,000 people, then only one percent (1%) of the combined community's population would access this space. There are more compelling recreational options to serve these communities, aside from expanding the existing trail.

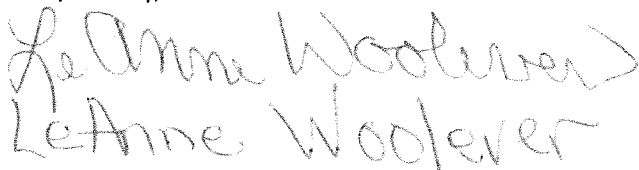

Additionally, all farms adjacent to the southern levee will likely have to buffer a minimum one hundred feet for food safety and pesticide application purposes. Along the nearly seven mile stretch, there will be almost one hundred acres of prime farm ground lost due to the required buffer zone. If that ground is taken out of strawberry production, (which brings a gross revenue of about eight million dollars, 40% of which are in wages), then over three million dollars, *annually*, will be taken out of the hands of our agricultural workforce, directly affecting their livelihood.

Extending the levee trail would also significantly impact local growers. Farmers growing crops near the existing trailhead at Blosser Road constantly deal with issues of theft, vandalism, trespassing, litter, unauthorized use of portable toilets, dogs roaming off leash, canine fecal matter, increased homeless presence, and drug paraphernalia. Not only do these hazards pose significant risks to the safety, security, and health of the crops produced, but also the safety, security, and health of the employees who work in the remote area of the proposed trail.

Considering the examples above are actual issues currently being faced by farmers near the existing trailhead, one could argue that these issues are reasonably foreseeable hazards. Per the federal Food Safety Modernization Act ("FSMA") signed into law by President Obama in 2011, farmers are required to mitigate reasonably foreseeable hazards. Extending the trail will increase food safety and employee safety risks for all farmers and farmworkers along the levee down to Main Street and from Blosser Road to Peralta Street.

We support the county's effort to increase recreational trail use and alternate transportation plans, however we oppose an extension of the Santa Maria Levee Trail. Not only would it financially hurt local farmworkers and their families, but it would put an undue financial burden on agricultural growers to support federal legal compliance and safety measures. We encourage you to oppose extending the levee trail as a measure of prevention for the safety of our crops, our employees, and consumers worldwide who entrust us to provide them with safe, wholesome, and nutritious fruits and vegetables.

Respectfully,

*Carol Redhead*  
CAROL REDHEAD

The Honorable Santa Barbara County Board of Supervisors,

The vibrant communities of Santa Maria and Guadalupe are home to our county's largest agricultural producers, with a population of roughly 120,000 residents, many of whom are agricultural workers. Our community not only prides itself on our rich agricultural heritage, but also on the expansive open and recreational space it offers citizens. The proposed extension of the Santa Maria Levee Trail, however, has not adequately considered the impact to both the population it is intended for, or the unintended consequences to agricultural producers in the valley.

If the current and anticipated extension serves 1,000 people, then only one percent (1%) of the combined community's population would access this space. There are more compelling recreational options to serve these communities, aside from expanding the existing trail.

Additionally, all farms adjacent to the southern levee will likely have to buffer a minimum one hundred feet for food safety and pesticide application purposes. Along the nearly seven mile stretch, there will be almost one hundred acres of prime farm ground lost due to the required buffer zone. If that ground is taken out of strawberry production, (which brings a gross revenue of about eight million dollars, 40% of which are in wages), then over three million dollars, *annually*, will be taken out of the hands of our agricultural workforce, directly affecting their livelihood.

Respectfully, 

The Honorable Santa Barbara County Board of Supervisors,

The vibrant communities of Santa Maria and Guadalupe are home to our county's largest agricultural producers, with a population of roughly 120,000 residents, most of whom are agricultural workers. Our community not only prides itself on our rich agricultural heritage, but also on the expansive open and recreational space it offers citizens. The proposed extension of the Santa Maria Levee Trail, however, has not adequately considered the impact to both the population it is intended for, or the unintended consequences to agricultural producers in the valley.

If the current and anticipated extension serves 1,000 people, then only one quarter (¼) of 1% of the combined community's population would access this space. There are more compelling recreational options to serve these communities, aside from expanding the existing trail.

Additionally, all farms adjacent to the southern levee will likely have to buffer a minimum one hundred feet for food safety and pesticide application purposes. Along the nearly seven mile stretch, there will be almost one hundred acres of prime farm ground lost due to the required buffer zone. If that ground is taken out of strawberry production, (which brings a gross revenue of about eight million dollars, 40% of which are in wages), then over three million dollars, *annually*, will be taken out of the hands of our agricultural workforce, directly affecting their livelihood.

Extending the levee trail would also significantly impact local growers. Farmers growing crops near the existing trailhead at Blosser Road constantly deal with issues of theft, vandalism, trespassing, litter, unauthorized use of portable toilets, dogs roaming off leash, canine fecal matter, increased homeless presence, and drug paraphernalia. Not only do these hazards pose significant risks to the safety, security, and health of the crops produced, but also the safety, security, and health of the employees who work in the remote area of the proposed trail.

Considering the examples above are actual issues currently being faced by farmers near the existing trailhead, one could argue that these issues are reasonably foreseeable hazards. Per the federal Food Safety Modernization Act ("FSMA") signed into law by President Obama in 2011, farmers are required to mitigate reasonably foreseeable hazards. Extending the trail will increase food safety and employee safety risks for all farmers and farmworkers along the levee down to Main Street and from Blosser Road to Peralta Street.

We support the county's effort to increase recreational trail use and alternate transportation plans, however we oppose an extension of the Santa Maria Levee Trail. Not only would it financially hurt local farmworkers and their families, but it would put an undue financial burden on agricultural growers to support federal legal compliance and safety measures. We encourage you to oppose extending the levee trail as a measure of prevention for the safety of our crops, our employees, and consumers worldwide who entrust us to provide them with safe, wholesome, and nutritious fruits and vegetables.

Respectfully,

  
Barbara Culberson

The Honorable Santa Barbara County Board of Supervisors,

Hi Santa Barbara County Board of Supervisors,

I am a resident of Santa Barbara County and I'm reaching out in support of the proposal to expand the SM levee trail to Guadalupe. Personally, I'm really excited about this opportunity to invest in the community of Santa Maria and create more opportunities for folks to walk, bike, and run with family & friends.

Currently, Santa Maria only has access to 8 miles of trails across two options, while Santa Barbara has over 130 miles of trails across 52 options. As the biggest city in the county with majority working class BIPOC residents, Santa Maria deserves better. At its core, this proposal is an issue of environmental justice. Too often, communities of color receive disproportionate investment resulting in less access to green spaces. Extending the trail is an opportunity to remedy this issue and double the access to trails. I strongly urge you to advocate for the health of families in Santa Maria.

Thank you,

Elizah Hernandez
