Thankful that something is finally happening in the world of Carpinteria cannabis odor.

Sadly, however, we wanted to note, the stench yesterday on Easter Sunday emanating from valley crest was hideous.

Are they still allowed to be operating?

It was a challenge to be outside for our Easter activities.

We had truly though we were done with this..

please advise.

Gratefully,
Dani & Bill Hahn

Definitely. It was horrendous at both 5980 Casitas Pass Rd (Valley Crest) and 5775 Casitas Pass Rd (Rincon Point?; Blue Whale?) when we drove by around 3ish. It still smelled at 5775 when we were coming home around 8:15.

Dear Santa Barbara County Planning Commissioners

The motto “**Think Global, Act Local**” seems relevant to oil in the Santa Barbara Channel. Globally, there is an ever increasing demand for electric power. Oil is needed to produce electrical power among its other uses. Artificial Intelligence data centers are estimated to consume 20% of electrical production in the near future.

Renewable sources of energy are far less efficient. After all, the sun shines but half the time, the wind blows less than that, and hydro electric power is scarce in drought prone California. In contrast, America’s natural gas delivery system is 92% efficient.

Transport of oil across the seas produces CO2 emissions. This is a **Global problem**. Producing oil in Santa Barbara reduces the amount of oil transported Globally. Producing oil in Santa Barbara helps in producing electrical power in California. This is a **Local Solution**.

There is an increasing Demand for electric power in Santa Barbara. Allowing Sable Oil to transport oil provides more Supply in Santa Barbara. Please **Act Local** and *allow Sable Oil to operate here*.
