Subject: Provide peered reviewed scientific research on all matters Covid

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

Since the County is requiring medical treatments, the people are legally entitled to see the County's scientific evidence of the Covid 19 isolate, complete safety record including VAERS & clinical trial of all vaccines, cotton Mask Efficacy and Social Distancing Efficacy protocols that the County has burdened the people with.

The people require the government to provide proof, documented peer reviewed research stating ;

- The Covid 19 virus isolate
- the efficacy of cloth masks that people are being required to wear
- 6 feet of social distancing is effective.
- the genomics sequencing for every documented Covid test result detailing the different variants of Covid.
- Clinical trial data on pregnant women as to the safety of Covid vaccines for pregnant women.
-
- If the Covid vaccines are effective and 70% of Santa Barbara has received at least one shot providing at least 80% immunity, why is the County requiring workers to be vaccinated?
- Why are those that had Covid and survived being required to mask up and required to take a vaccine?
- A statement on the CDC website is NOT peer reviewed scientific research with control groups.
- SB Public Health needs to produce these documents supporting their position.

As to mandatory vaccinations. The consent forms state, "understand the benefits and risks of the vaccine." However, the adverse affects that have been recorded through VAERS is not listed on the consent forms. Why not?

Since there are reported & known adverse affects such as myocarditis, pericarditis, blood clots, etc... If an employee is required to take a vaccine then they need to be guaranteed financial stability and healthcare for life.

Forcing people to take a vaccine or drug to maintain their career and income is coercion.
