Subject: Deny Exxon trucking project - Upcoming Board of Supervisors Meeting

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

Dear Santa Barbara County Board of Supervisors,

I urge you to deny this dangerous project as recommended by the Santa Barbara Planning Commission.

In addition to the significant and unavoidable risks of spills from trucking the oil, the purported benefit of producing oil from the offshore platforms and processing it on the Gaviota coast would bring with it unacceptable risks of offshore oil spills, air pollution and toxic fire and smoke risks that were not analyzed in the EIR, which focused narrowly on trucking impacts.

The recent oil spill off of Orange County underlines the severity of these risks. In addition, ExxonMobil's facilities were the largest sources of air pollution in the county and contained dangerous and toxic materials in an area that has burned by wildfire twice in the 6 years since the facilities have been shut down. We were fortunate that oil and dangerous gases were not present at the site during the recent Alisal fire, which burned onto ExxonMobil's property.

It is not just that the trucking routes are along sections of road with above average accident rates, there have been specific and recent instances of oil tankers on this route spilling oil into rivers and starting fires. In fact, on October 11 -- the same day as the Alisal fire -- an oil tanker crash near Orcutt caused a fire in Eucalyptus trees.

Thank you for denying this dangerous and unacceptable oil trucking project.

Sincerely,

Darrell Neft

Subject: Public Comment to Deny Exxon's Valve Upgrade Project

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

Dear Santa Barbara County Board of Supervisors,

My name is Torrie Cutbirth. I am 30 years old. I was raised in Santa Barbara and have been living and working in the nonprofit sector here for over 22 years now. I went to Roosevelt Elementary, SB Jr. High & SB High School. I work for a local environmental funder, I am a part of the Santa Barbara City College Environmental Horticulture Program, and I am a part of the local UC Climate Stewards Alumni Group.

I am emailing you today to **urge you to please deny Exxon's Valve Upgrade Project**. I spoke at the Santa Barbara Planning Commission's hearing earlier this year to deny the project, and broke into tears urging them to protect our local environment, and people, and deny this project.

It is of utmost importance that you deny this project.

According to climate scientists, the next 7 years is our LAST chance to enact bold changes in our economy and culture to avoid the worst case scenarios for climate impacts. We can not have healthy, thriving communities, a healthy, local economy or any hope for a bright future, when fossil fuels are still in the equation.

I understand that the City and County rely heavily on tourism dollars. What tourist wants to come to Santa Barbara when there are oil spills, air pollution, water pollution, and dead marine life...Tourists want to come to a beautiful, pristine, healthy community. And that's where locals want to live and work. Our tourist and agriculture economy RELY on a healthy environment for both locals and guests.

I urge you, as a youth of this community, to vote to protect our environment. Vote to ensure our healthy and safe futures, and save our environment, and all life, from the deadly impacts of fossil fuel production and climate change.

As a local funder, I have the privilege to watch our incredible community of environmental experts, climate stewards, and activists who work tirelessly year-round to protect and safeguard our local environment. I ask you to please honor our home local community of life by not making us continue to fight big oil, and continuing to suffer at the hands of fossil fuel companies and climate change.

Thank you.

In Community,

Torrie Cutbirth (she/her/hers)

Subject: Please Deny Exxon's Appeal to Repair their Gaviota Coast Corroded Pipeline

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

Voters chose the Santa Barbara County Board of Supervisors and expect the Board to fulfill the will of Santa Barbara County voters that chose all of you for your jobs.

The oil industry has repeatedly polluted Santa Barbara County's coastline because these cavalier billion dollar industries repeatedly & catastrophically failed to properly & safely maintain their own infrastructure.

My wife Lisa & I are registered Santa Barbara County voters, who were compelled to sell our home that is situated on the "abandoned" Santa Maria Oil Field.

We were compelled to sell our home in 2015 because the Santa Maria City Council re-zoned Santa Maria for oil drilling & extraction within the City Limits, "in every park, catch basin or open space within the City of Santa Maria" in 2012.

Our 'WestGate' Subdivision in SouthWest Santa Maria, is one of five adjacent subdivisions, that are less than 2000 ft. downwind from the City's proposed 72 new oil wells within their newly proposed Area 9 Industrial Park.

My wife & I were allied with dozens of citizens appearing before the Santa Maria City Council, including former Santa Barbara Supervisor Toro Myoshi, opposing the proposed City zoning changes. The Area 9 Zoning passed, despite our vehement objections pointing out to City Planning & Council that the project's EIR stated that there would be "severe impacts that cannot be mitigated" from the proposed re-opening of the Santa Maria Valley Oil Field beginning first in Area 9.

After the Area 9 Zoning passed it's City Council votes, we made several appearances before the Santa Barbara Board of Supervisors with the concerned Santa Maria ad hoc committee, citizens group, "Stop Oil Development Area 9" in support of Santa Barbara County's Ballot Initiative Measure P.

Big Oil Never Keeps its Promises and Cannot Be Trusted. Don't let them back into operations.

Please deny Exxon's request to do work on the old pipeline that would lead to restart of oil extraction activities on the Gaviota Coast.

Dear Supervisors,

Please deny Exxon's so-called safety valve upgrades. These "upgrades" are extremely dangerous and will never make the pipeline safe. Instead please order the immediate shutdown and removal of the corroded pipeline.

Exxon is cynically attempting to re-use the very same pipeline that ruptured in 2015 at Refugio Beach sending 450,000 gallons of oil onto the Santa Barbara Channel coastline resulting in at least 202 dead birds and 99 dead mammals, including at least 46 sea lions and 12 dolphins. Any efforts to restart this pipeline will only prove catastrophic.

I dreamed of moving to Santa Barbara for decades before I actually figured out how to; one of the chief attractions for me to come was the Gaviota coast, which I had been enthralled by since I was in my twenties visiting the area. It would be unbelievable to me if this precious stretch were to be ruined -- for many years -- in the name of ExxonMobil, the relatively few jobs the project will offer, and a dying energy source.

Please DO NOT give Exxon the ability to unleash an environmental disaster ever again.

Thank you for your attention.

Sincerely,

Drew Hart

To: sbcob
Subject: 901/903 Valve Upgrade

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

To Santa Barbara County Board of Supervisors,

My name is Joshua Stewart. I am a concerned native Santa Barbara County resident. I am writing to express my support for the proposed Line 901/903 Replacement Project. Completing replacement, to automate protection of the pipeline, as well as increasing the number of shutoff valves will serve to better protect the public and environment. Upgrading the pipeline valves will function to protect the environment from an incident through the utilization of proven reliable automation technology, as well as minimize the effects to the environment by decreasing the volume of product between valves due to their increased frequency thereby immensely limiting the maximum effects of an incident. This is an opportunity to address safety and environmental concerns regarding this pipeline. As a concerned citizen I urge you to help the environment by approving this positive change.

I believe in a policy of energy independence. Ninety-five percent of the world's energy consumption is tied to the use of fossil fuels. The California DMV in 2019 estimates there are 414,334 vehicles registered in Santa Barbara County. Of these vehicles, 84,042 are Trucks. Few people in this county are giving up their vehicles. Electric cars aren't affordable to the everyday working person and California's power grid is already rolling black outs to the public. The system of public transit available is limited and, let's face it, unclean. It makes sense to continue to produce energy in Santa Barbara County due to the county's citizens continued consumption and dependence on gasoline. The infrastructure is in place for oil and gas production because of this county's long history of oil production. This county consumes oil and gas resources, it should do its part in production.

I support the re-start of the 901/903 pipeline. Oil can be produced safely and responsibly. I believe the new owners, with their superior resources and upgraded protection systems, will be able to operate the pipeline safely and incident free. Re-starting the pipeline will serve to increase above average wage employment and stimulate the local economy.

Letters received by this board in opposition of this project mention their opposition to fossil fuels in general, however the number of gasoline vehicles registered and driven in this county demonstrates a complete lack of

self-reflection regarding the reality of our carbon footprint. The reality is that the 144,000 workers in this county average a 20-minute commute to their jobs. That's a lot of fossil fuel being used by people.

I urge this board to approve the proposed "Line 901/903 Replacement Project". Having a more robust and automated safety system for the pipeline is in the public's best interest and can have only positive effects.

Joshua Stewart

Subject: Deny the Plains Valve Upgrade Project at the upcoming Board of Supervisors meeting

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

Dear Clerk of the Board,

OH HELL NO! I'VE HAD TO CLEAN UP TOO MANY OIL SPILLS AND WITNESS TOO MANY DEATHS IN MY LIFETIME!! Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Heather Brophy

Dear Clerk of the Board,

I have lived on the Central Coast for 13 years and was born near Santa Cruz. I have watched for 50 years as our coastline changes and suffers the consequences of poor human management. The land and the ocean are not commodities.

Oil spills have fouled the Santa Barbara coast for far too long. I was here in 2015 for the Plains All American pipeline spill. It plus the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. Subject: Vote No! on the Plains Valve Upgrade Project at the upcoming Board of Supervisors meeting

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

Dear Clerk of the Board,

Please let's not do anything to further risk the beauty of Santa Barbara's coastal habitats! Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk. Santa Barbara's wonderful marine life and ecosystems deserve much better; as in whole-hearted marine stewardship

You have the power — and, I'd say, the moral responsibility — to stop this proposed oil project. As a resident of neighboring coastal San Luis Obispo County, I treasure Santa Barbara County's coast, too, and we share in appreciating the beautiful creatures that migrate through our respective coastal waters. Thus, I most urgently request that you deny ExxonMobil's permit application to restart the toxic danger-filled Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

Additionally, the zoning administrator's approval of this project is based unacceptably on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Of paramount concern, of course, is that the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious, amazing animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's clearly time to end the era of fossil fuels. Therefore, I most strongly urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this ocean-imperiling pipeline.

Thank you for your thoughtful and careful attention to this vitally important-for all Californians-matter.

Sincerely,
Lynne Harkins

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

Dear Clerk of the Board,

Plains All-American has a terrible pollution record all over the country. Their 2015 Refugio Oil spill polluted nine miles of SB coastline. Notably, Plains did not report the spill until it was discovered by others. Their infrastructure is decrepit and has cost them enough money that they have sold to ExxonMobile.

[https://urldefense.com/v3/__https://en.wikipedia.org/wiki/Plains_All_American_Pipeline__;!!fs0MJmijOm0!t1LNWKR0QzThL5lyOeefKM u9R_otE7CB31zbREJQJIDNsT6IOBGjjmxYrreqPFES_J1CQbKiBGbV-HjuHCIkzMCxsecZZjojY\\$](https://urldefense.com/v3/__https://en.wikipedia.org/wiki/Plains_All_American_Pipeline__;!!fs0MJmijOm0!t1LNWKR0QzThL5lyOeefKM u9R_otE7CB31zbREJQJIDNsT6IOBGjjmxYrreqPFES_J1CQbKiBGbV-HjuHCIkzMCxsecZZjojY$)

ExxonMobile denied climate change until the company was sued by their own investors because they noticed ExxonMobile was trying to hide the cost of raising their platforms to deal with the climate change they were busy denying.

ExxonMobile cannot be trusted to operate responsibly.

[https://urldefense.com/v3/__https://en.wikipedia.org/wiki/ExxonMobil__;!!fs0MJmijOm0!t1LNWKR0QzThL5lyOeefKM u9R_otE7CB31zbREJQJIDNsT6IOBGjjmxYrreqPFES_J1CQbKiBGbV-HjuHCIkzMCxseZvviewMY\\$](https://urldefense.com/v3/__https://en.wikipedia.org/wiki/ExxonMobil__;!!fs0MJmijOm0!t1LNWKR0QzThL5lyOeefKM u9R_otE7CB31zbREJQJIDNsT6IOBGjjmxYrreqPFES_J1CQbKiBGbV-HjuHCIkzMCxseZvviewMY$)

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk? WHY?

You have the power — and the responsibility — to stop this. As a Santa Luis Obispo County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales, among many other natural residents of the Channel. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put California's people and wildlife first: DENY ExxonMobil's permit application to restart this dangerous pipeline.

Dear Clerk of the Board,

I don't live in Santa Barbara, but I am a frequent visitor. I helped clean up the 1969 oil spill and the memory is still vivid in my aging mind. Our oceans and their wildlife are already struggling enough under the impacts of pollution and climate change and we can't afford to put them at more risk. The coastline is Santa Barbara's greatest asset. Don't take a chance on spoiling it again

Oil spills have fouled the Santa Barbara coast for far too long. Dear Clerk of the Board,

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk. This is an environmental shame, to put it mildly,

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I implore — no, demand — that you deny ExxonMobil's permit application to restart the disastrous Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down immediately.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills to negotiate perilously through.

It's well-past time to end the era of fossil fuels. As such, I strongly, adamantly, and fervently urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous and unnecessary pipeline.

Sincerely,
David Walker

Dear Clerk of the Board,

With climate change bringing more horrific events all around us, it's long past the time to move away from fossil fuels. And it's long past the time that we allow oil companies put profit ahead of all else.

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Pamela Wilkinson

The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Irene Cooke

Dear Clerk of the Board,

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Dear Clerk of the Board,

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Tina Wener

The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Gail Tinsley

Dear Clerk of the Board,

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Dear Clerk of the Board,

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Kathlene Henry-Gorman

The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Nancy Carter

Dear Clerk of the Board,

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Dear Clerk of the Board,

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Peggy Merizalde

The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Sylvia Sullivan

Dear Clerk of the Board,

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Dear Clerk of the Board,

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Catherine Dishion

Subject: Exxon Pipeline Project - Aug 22nd CBOS Hearing on 8/22

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

Hello, I'm a resident of Santa Barbara County and am writing to express my opposition to Exxon's proposed pipeline project. I understand this subject will be included in the August 22nd Board of Supervisors meeting.

I oppose this project since I believe the risks of harming our environment due to issues associated with operating the pipeline outweigh the benefits of the oil product it creates.

Please forward my message to appropriate leaders on the Supervisors Team. Thank you for your consideration.

Dear Clerk of the Board,

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

How many times do we have to clean up the mess from a leaking pipeline, poison our coastal environment, kill hundreds of our seabirds and other sea life, before we get serious about protecting our precious coastline? Please, I urge you to deny any future pipelines and/or drilling!
Thank you!

Sincerely,
Vicki Bookless

Dear Clerk of the Board,

I've been living in SB since 1960 and remember the spill that resulted in GOO being formed. I've been protesting ever since. We can't let the fossil fuel companies continue to ignore the health of our environment in the pursuit of profit.

Oil spills have fouled the Santa Barbara coast for far too long. The 2015 Plains All American pipeline spill and the 1969 offshore oil disaster should have put an end to oil extraction in Santa Barbara County — but more than 50 years later, we're still allowing fossil fuel companies to put people, wildlife and coastlines at risk.

You have the power — and the responsibility — to stop this. As a Santa Barbara County resident, I urge you to deny ExxonMobil's permit application to restart the Plains Pipeline at the upcoming Santa Barbara County Board of Supervisors meeting.

The 2015 oil spill damaged the coast and killed hundreds of marine mammals and birds. Now ExxonMobil wants to restart this old, ruptured pipeline. The company would also need to use the decaying 1980s offshore platforms connected to the failed pipeline, which are way beyond their intended lifespan and should be shut down.

The zoning administrator's approval of this project is based on faulty environmental analysis. The analysis fails to consider the impacts of restarting and replacing certain segments of the pipeline; ignores the impacts of the 2015 spill that were not accounted for in the original environmental analysis; and ignores the factors currently contributing to the corrosion of the pipeline.

Finally, the Santa Barbara Channel is a migration route and feeding ground for endangered blue and humpback whales. These precious animals — and many other species who rely on healthy ocean ecosystems for survival — need increased protection, not more deadly oil spills.

It's time to end the era of fossil fuels. I urge you to put Santa Barbara's people and wildlife first by denying ExxonMobil's permit application to restart this dangerous pipeline.

Sincerely,
Rebecca Wave

Subject: Reject the Exxon pipeline scheme - Aug 22 Board of Supervisors meeting

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

Dear Supervisors,

Please deny Exxon's so-called safety valve upgrades. These "upgrades" are extremely dangerous and will never make the pipeline safe. Instead please order the immediate shutdown and removal of the corroded pipeline.

Exxon is cynically attempting to re-use the very same pipeline that ruptured in 2015 at Refugio Beach sending 450,000 gallons of oil onto the Santa Barbara Channel coastline resulting in at least 202 dead birds and 99 dead mammals, including at least 46 sea lions and 12 dolphins. Any efforts to restart this pipeline will only prove catastrophic.

Please DO NOT give Exxon the ability to unleash an environmental disaster ever again.

Sincerely,
Patrick Boyle

Subject: Stop Exxon's Reckless Pipeline plans

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

Dear Board of Supervisors,

Regarding Exxon's attempt to restart the Plains pipeline that broke in 2015 and caused horrific damage to the coast, killing hundreds of marine mammals and birds: This disaster is one of many in Santa Barbara's painful history of oil spills.

The pipeline in question is highly corroded, unable to comply with corrosion prevention standards, and poised to cause another major oil spill.

Exxon is in negotiations with a company called Sable to sell the pipeline, offshore rigs, and other facilities. Permits given to Exxon will likely be transferred to Sable, a company with no proven ability to be held liable for future spills and decommissioning costs.

The decaying 1980s offshore platforms connected to this pipeline are way beyond their intended lifespan described in the leases and need to be shut down.

The world's climate scientists say we need to rapidly reduce fossil fuel use to avoid the worst impacts of the climate crisis. Allowing this project to move forward would only worsen the crisis, driving more mass extinction and human suffering. California crude oil is some of the most carbon-intensive in the world.

The county must deny this project or we will forfeit any more local opportunities to weigh in on the impacts of oil production and transport using this pipeline. As we know all too well from the Refugio spill of 2015, these can be major and long-lasting impacts. The existing environmental analysis completely fails to consider those impacts.

The county should deny this project due to its massive and predictable environmental impact of causing more oil spills, more death to wildlife, and exacerbating the climate crisis.

Thank you for your consideration of this request,

Rachel (Rochelle) Altman
1383 Sycamore Canyon Road
Santa Barbara, CA 93108
