Subject: Tajiguas Landfill Recovery Project

Dear Supervisors,

I have great concerns regarding the new landfill project regarding Tajiguas. Do we know what the cost will be to the public if this project is approved? Is it certain that there are not better ways to implement advanced sorting and expanded food waste collection? I understand that the composted materials that are generated from a "dirty MRF" are not necessarily a quality that can be used for farming and ranching.

As our landfill reaches maximum capacity, I hope we can look at the very best possibilities for reducing our personal waste and the most efficient ways to compost food scraps so that they do not all end up at Tijuana in an inappropriate industrial complex on the Gaviota Coast. I recall that Mustang was going to sponsor the costs associated with this project initially. Now it appears that significant consumer costs will be need to complete the proposed project. PLEASE CONSIDER ALTERNATIVES!

Sincerely,

Janet Koed
