WHEREAS, organic materials suitable for composting represent up to 70 percent of materials that could be landfilled each year and composting is an effective form of waste reduction, reuse and recycling; and

WHEREAS, home composting and mulching is a way householders can reduce the volume of waste generated at home by taking individual responsibility for keeping waste reduction costs down; and

WHEREAS, compost improves the soil structure, reduces erosion and run-off, supplies soil with a variety of macro and micro nutrients; and enables compost amended soils to use less water; and

WHEREAS, using sustainable soil-enriching composts helps prevent erosion of valuable topsoil without depleting valuable wildlife habitats; and

WHEREAS, Community Sustainability is enhanced by composting greenwaste, biosolids, and other organic materials and promoting the use of renewable resources in landscaping, horticulture and agriculture; and

WHEREAS, composting programs would benefit from increased awareness of the benefits of adding organic materials to the soil, thereby increasing the demand for compost; and

WHEREAS, returning composted organic resources to the soil is a method of decreasing the dependence on chemical fertilizers, decreasing erosion, reducing water consumption and non-point pollution; and

WHEREAS, The County of Santa Barbara has initiated Greenwaste collection programs with its franchise haulers to aid in the efforts of Environmental Sustainability; and

WHEREAS, Engel & Gray Inc. Regional Composting Facility in Santa Maria has been successfully composting organic material for sustainable agricultural practices.
