RE: Lompoc Wind Energy Project
06CUP-00000-00009; 08VAR-00000-00003; 06EIR-00000-00004

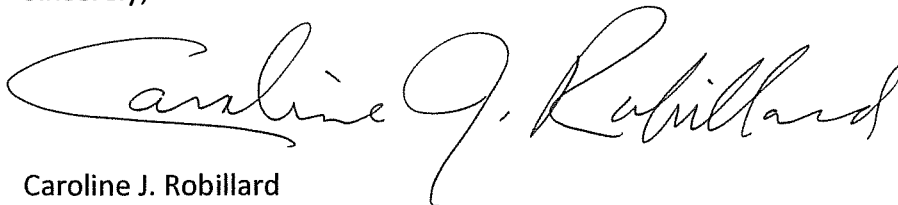

To Whom It May Concern:

I am a strong supporter of moving our region away from fossil fuels and helping to lessen the impacts of climate change. This is why I also support energy conservation and increased efficiency, renewable energy and sustainable transportation measures.

The Lompoc Wind Energy Project is the first utility-scale renewable energy project in our county, so your handling of it will have major implications for future projects of this kind. While I have read about the likely biological and visual impacts of the project, I believe that the project's ability to provide 10 percent of our county's electricity demand is a major benefit to our region. The impacts from this wind power project are far less than from new natural gas, coal or nuclear plants -- and it will greatly enhance our county's energy grid reliability and our energy independence! The County will also benefit from new jobs, cost-effective power and tax revenue.

I'd like to voice my full support for the Lompoc Wind Energy Project.

Sincerely,

Caroline J. Robillard

Dear Santa Barbara County Supervisors:

I am a strong supporter of moving our region away from fossil fuels and helping to lessen the impacts of climate change. As you most likely know, I have worked for energy conservation and ways to increased energy and water efficiency in our homes for many years. I am also a strong supporter of renewable energy and sustainable transportation measures.

The Lompoc Wind Energy Project is the first utility-scale renewable energy project in our county, so your handling of it will have major implications for future projects of this kind. While I understand there are likely to be some biological and visual impacts of the project, and in the big picture, I would say these are minor, I believe that the project's ability to provide 10 percent of our county's electricity demand is a major benefit to our region. The impacts from this wind power project are far less than from new natural gas, coal or nuclear plants -- and it will greatly enhance our county's energy grid reliability and our energy independence! The County will also benefit from new jobs, cost-effective power and tax revenue.

I'd like to voice my full support for the Lompoc Wind Energy Project.

Sincerely,

A handwritten signature in cursive script that reads "Dennis Allen".
