Subject: Santa Barbara County Supervisors - Deny PCEC's Steam Fracking Project

Sep 8, 2016

Supervisor Peter Adam
CA

Dear Supervisor Adam,

On June 29, your Planning Commission voted 3-2 to deny Pacific Coast Energy Company's application to drill almost 100 additional steam fracking (cyclic steam injection) wells, due to numerous unavoidable environmental impacts that would result from the proposal.

I urge you to uphold their decision to deny the project, now that it has been appealed to the Board.

Please continue to move Santa Barbara County in the direction of a 100% renewable energy future by denying Pacific Coast Energy Company's (PCEC's) new steam fracking project.

We need reliable, safe jobs in the renewable energy sector; not hazardous, tenuous employment that can disappear with a decline in global oil prices or with a ruptured pipeline.

Santa Barbara and the Tri-Counties have made an excellent first step in leading our region into the first phase of a 100% renewable Community Choice Energy program. It would be incongruous to also approve the expansion of one of the dirtiest, most carbon intensive oil projects.

Protect Santa Barbara County from the unavoidable boom and bust cycles associated with an oil-based economy. Help us benefit from the growing renewable energy economy by transitioning us away from oil development.

On behalf of the climate, our economy and our health, I urge you to deny the Pacific Coast Energy Company's proposal, in favor of a swift transition to a clean and prosperous energy future.

Sincerely,

Ms. Heidi Wascher

Subject: Santa Barbara County Supervisors - Deny PCEC's Steam Fracking Project

Sep 8, 2016

Supervisor Peter Adam
CA

Dear Supervisor Adam,

I was born and raised in Santa Barbara.

Spent most of my childhood exploring the bluff in Ellwood.

Every year I come back to visit my parents who still live there.

So you can understand when I got word that PCEC wants to frack my hometown my response was 'Frack NO'. Except I used a shorter word up front.

I'm very pleased that on June 29, your Planning Commission voted 3-2 to deny Pacific Coast Energy Company's application to drill almost 100 additional steam fracking (cyclic steam injection) wells, due to numerous unavoidable environmental impacts that would result from the proposal.

NOW: I urge you to uphold their decision to deny the project, now that it has been appealed to the Board.

Please continue to move Santa Barbara County in the direction of a 100% renewable energy future by denying Pacific Coast Energy Company's (PCEC's) new steam fracking project.

We need reliable, safe jobs in the renewable energy sector; not hazardous, tenuous employment that can disappear with a decline in global oil prices or with a ruptured pipeline.

Santa Barbara and the Tri-Counties have made an excellent first step in leading our region into the first phase of a 100% renewable Community Choice Energy program. It would be incongruous to also approve the expansion of one of the dirtiest, most carbon intensive oil projects.

Protect Santa Barbara County from the unavoidable boom and bust cycles associated with an oil-based economy. Help us benefit from the growing renewable energy economy by transitioning us away from oil development.

On behalf of the climate, our economy and our health, I urge you to deny the Pacific Coast Energy Company's proposal, in favor of a swift transition to a clean and prosperous energy future.

Please continue to move Santa Barbara County in the direction of a 100% renewable energy future by denying Pacific Coast Energy Company's (PCEC's) new steam fracking project.

We need reliable, safe jobs in the renewable energy sector; not hazardous, tenuous employment that can disappear with a decline in global oil prices or with a ruptured pipeline.

Santa Barbara and the Tri-Counties have made an excellent first step in leading our region into the first phase of a 100% renewable Community Choice Energy program. It would be incongruous to also approve the expansion of one of the dirtiest, most carbon intensive oil projects.

Protect Santa Barbara County from the unavoidable boom and bust cycles associated with an oil-based economy. Help us benefit from the growing renewable energy economy by transitioning us away from oil development.

On behalf of the climate, our economy and our health, I urge you to deny the Pacific Coast Energy Company's proposal, in favor of a swift transition to a clean and prosperous energy future.

Sincerely,

Ms. Alexis Gharavi

Subject: Santa Barbara County Supervisors - Deny PCEC's Steam Fracking Project

Sep 7, 2016

Supervisor Peter Adam
CA

Dear Supervisor Adam,

On June 29, your Planning Commission voted 3-2 to deny Pacific Coast Energy Company's application to drill almost 100 additional steam fracking (cyclic steam injection) wells, due to numerous unavoidable environmental impacts that would result from the proposal.

I urge you to uphold their decision to deny the project, now that it has been appealed to the Board.

Please continue to move Santa Barbara County in the direction of a 100% renewable energy future by denying Pacific Coast Energy Company's (PCEC's) new steam fracking project.

Subject: I support Denial of PCEC's Orcutt Hills steam injection appeal

Good morning Supervisors,

I would like you to deny PCEC's Orcutt Hill injection project appeal for all the reasons the Sierra Club has stated below, ***but especially because of what I personally learned while participating in a Santa Maria study group sponsored by Trotta Associates this past June.***

The study group was focused specifically on this proposal although the study group participants weren't told which oil company had sponsored it. It rapidly became clear that the purpose of the group was to get the participants' reaction to the Orcutt Hills project in general, to gauge our reaction to the environmental and transportation issues resulting from it, and to develop a plan to counter the local community's objections.

There were about dozen participants in the group, and initially most of us were favorably inclined to consider (at least) the project's expressed benefits. But as the details of the injection process, environmental impacts, and transportation plans were enumerated, the group overwhelmingly changed their minds. Many of us were shocked at how the demolition of hundreds of oak trees was dismissed as unavoidable and "easy to mitigate" by planting seedlings. The huge increase in tanker truck traffic on local and regional roads was also treated as if it were no big deal and just routine business. There were many other similar examples of what (I felt) was a cavalier approach to the environmental concerns.

When we were asked to describe personal experiences we had had with the local oil industry, several of us mentioned having witnessed oil seeps, environmental damage, abandoned equipment and drilling pads, and air quality problems during bike rides and hikes in the area. Many questions resulted from our descriptions, and when we asked how this proposed project would deal with similar issues, we got a kind of "boiler plate" and generalized response that didn't seem to take any responsibility for these past problems, and didn't inspire any confidence in their future plans and assurances.

I'm sure you have heard similar testimony and I would be happy to answer any questions or provide any further personal experience that I can. I realize this is anecdotal, but our community is in actuality the sum of all our anecdotes.

And I agree with these Sierra Club points:

1. The Planning Commission carefully considered this project and rejected it because of the significant, unmitigated Class I impacts to Air Quality, Endangered and Sensitive Species, Critical Habitat and Water Quality. County Staff also recommends rejecting the appeal and only approving the emergency seep cans that are necessary to address the on-going seep problem from existing operations.
2. Cyclic Steam Injection method has a high well casing failure rate and there is a history of eruptive well failures at the site. The drilling would occur in an area that is already suffering extensive damage from 100 accidental oil seeps to date. The State predicts at least another 225 seeps in the next 25 years if the Project is approved.
3. The Project site is one of the most biologically rich locations in Santa Barbara County. The Project's oil seeps would potentially drown the endangered California Tiger Salamanders and destroy some of the rarest and most imperiled plant communities in the world, such as the Southern Bishop Pine forest and the Burton Mesa Chaparral. It will also have an irreversible impact on endangered Lompoc Yerba Santa plants, found in only 6 locations in the world.
4. The environmental review found significant and unavoidable risks to our water. The Project site is on a hill that intersects Orcutt creek and others that flow to the San Antonio Lagoon and Pacific Ocean. The

recent Refugio oil spill demonstrates the immense risk and costs of oil spills.

5. The County cannot justify overturning the Planning Commission 's decision and Staff recommendation of denial. The Project does not supply any benefits that will outweigh the potentially substantial and irreversible environmental harm from allowing PCEC to double its cyclic steam drilling operations on Orcutt Hill. Thus, the County cannot legally justify approving the Project with a Statement of Overriding Considerations.

I do hope you will deny the appeal and I thank you for your consideration.

Regards,

David Amenta

Subject: Facts for submittal at October 11th hearing

Dear Supervisor Janet Wolf (2nd District)

Please take the following facts into consideration at the October 11th hearing in Santa Maria.

1. **The Planning Commission carefully considered this project and rejected it because of the significant, unmitigated Class I impacts to Air Quality, Endangered and Sensitive Species, Critical Habitat and Water Quality. County Staff also recommends rejecting the appeal and only approving the emergency seep cans that are necessary to address the on-going seep problem from existing operations.**
2. **Cyclic Steam Injection method has a high well casing failure rate and there is a history of eruptive well failures at the site. The drilling would occur in an area that is already suffering extensive damage from 100 accidental oil seeps to date. The State predicts at least another 225 seeps in the next 25 years if the Project is approved.**
3. **The Project site is one of the most biologically rich locations in Santa Barbara County. The Project's oil seeps would potentially drown the endangered California Tiger Salamanders and destroy some of the rarest and most imperiled plant communities in the world, such as the Southern Bishop Pine forest and the Burton Mesa Chaparral. It will also have an irreversible impact on endangered Lompoc Yerba Santa plants, found in only 6 locations in the world.**
4. **The environmental review found significant and unavoidable risks to our water. The Project site is on a hill that intersects Orcutt creek and others that flow to the San Antonio Lagoon and Pacific Ocean. The recent Refugio oil spill demonstrates the immense risk and costs of oil spills.**
5. **The County cannot justify overturning the Planning Commission 's decision and Staff recommendation of denial. The Project does not supply any benefits that will outweigh the potentially substantial and irreversible environmental harm from allowing PCEC to double its cyclic steam drilling operations on Orcutt Hill. Thus, the County cannot legally justify approving the Project with a Statement of Overriding Considerations.**

Thank you in advance for taking action to prevent more oil seeps and spills in Santa Barbara County!

Sincerely,
Gordon Gerbitz (Registered Voter)

Orcutt Hill

Pacific Coast Energy Company

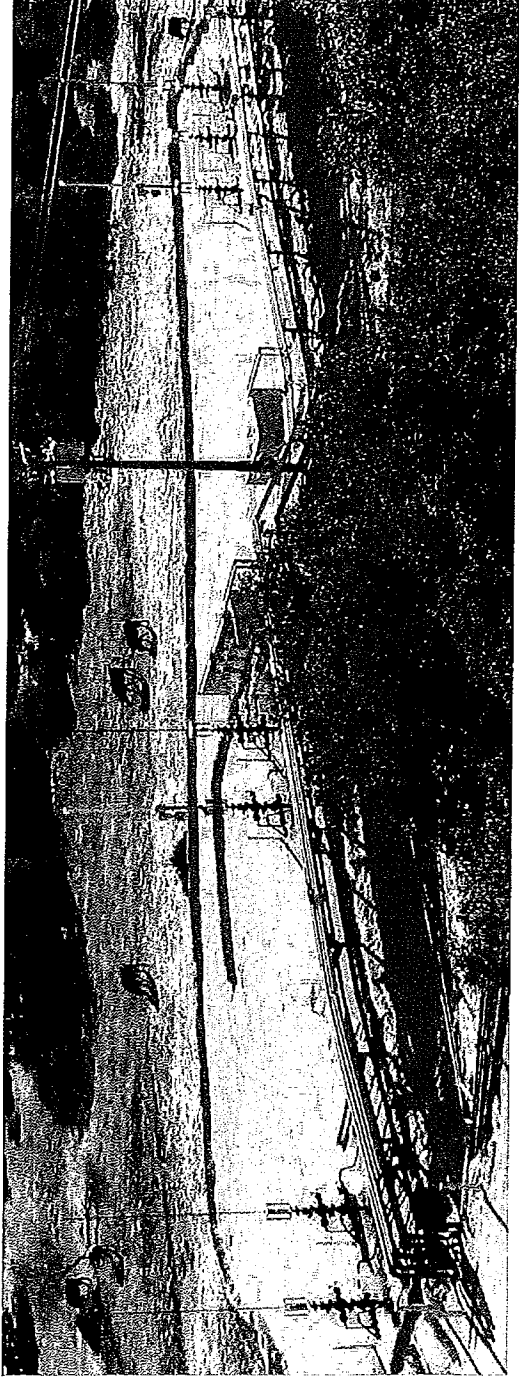

The Orcutt Hill Resource Enhancement Plan (OHRREP)

PCEC
Pacific Coast Energy Company

Orcutt Oil Field - Current Operations

- Orcutt Oil Field is 10,000+ acre state-designated oil field, discovered in 1901
- PCEC acquired several leases within the Field in 2004
- PCEC's Newlove parcel is 4,000+ acres; the proposed project areas occupy 3.1 acres within the 285-acre project site
- Approximately 300 producing wells on 200 existing well pads

Orcutt Hill

OHREP: Carefully Designed to Minimize Environmental Impacts

The project will occupy 3.1 acres of the 10,000 acre Field:

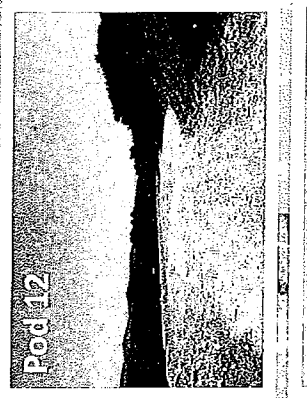

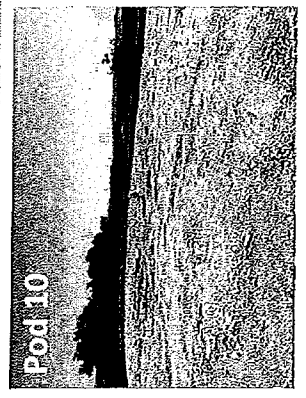

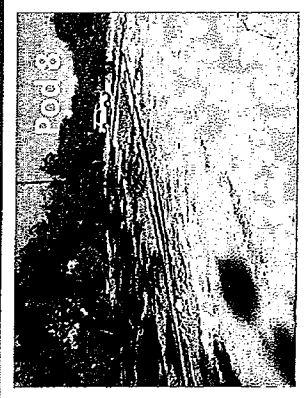

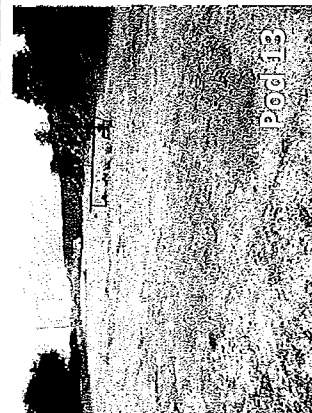

- No new oil field well pads will be created
- Just eight existing well pads for 96 new steam-injection production wells
- Because existing pads are being used, only minimal grading and vegetation removal.
- Existing steam generators that are fully compliant with AB32 and already permitted by the SBCAPCD
- Recycled brine water produced by other operations on-site will provide 100% of water for steam
- Use of existing roads, facilities, and established pipeline corridors

New Wells Constructed Only on Eight Existing Pads

FUTURE DIATOMI
 OF CITT HELL

PACIFIC COAST ENERGY COMPANY
 CIRCUIT OILFIELD
 SANTA BARBARA COUNTY, CALIFORNIA

Project Status

- County Staff recommended approval of the Project and approval of the Careaga Exclusion Alternative as the environmentally superior alternative
- Presented to the Planning Commission May 11 & June 29
- Planning Commission voted 3-to-2 to deny the project
- PCEC is appealing that decision

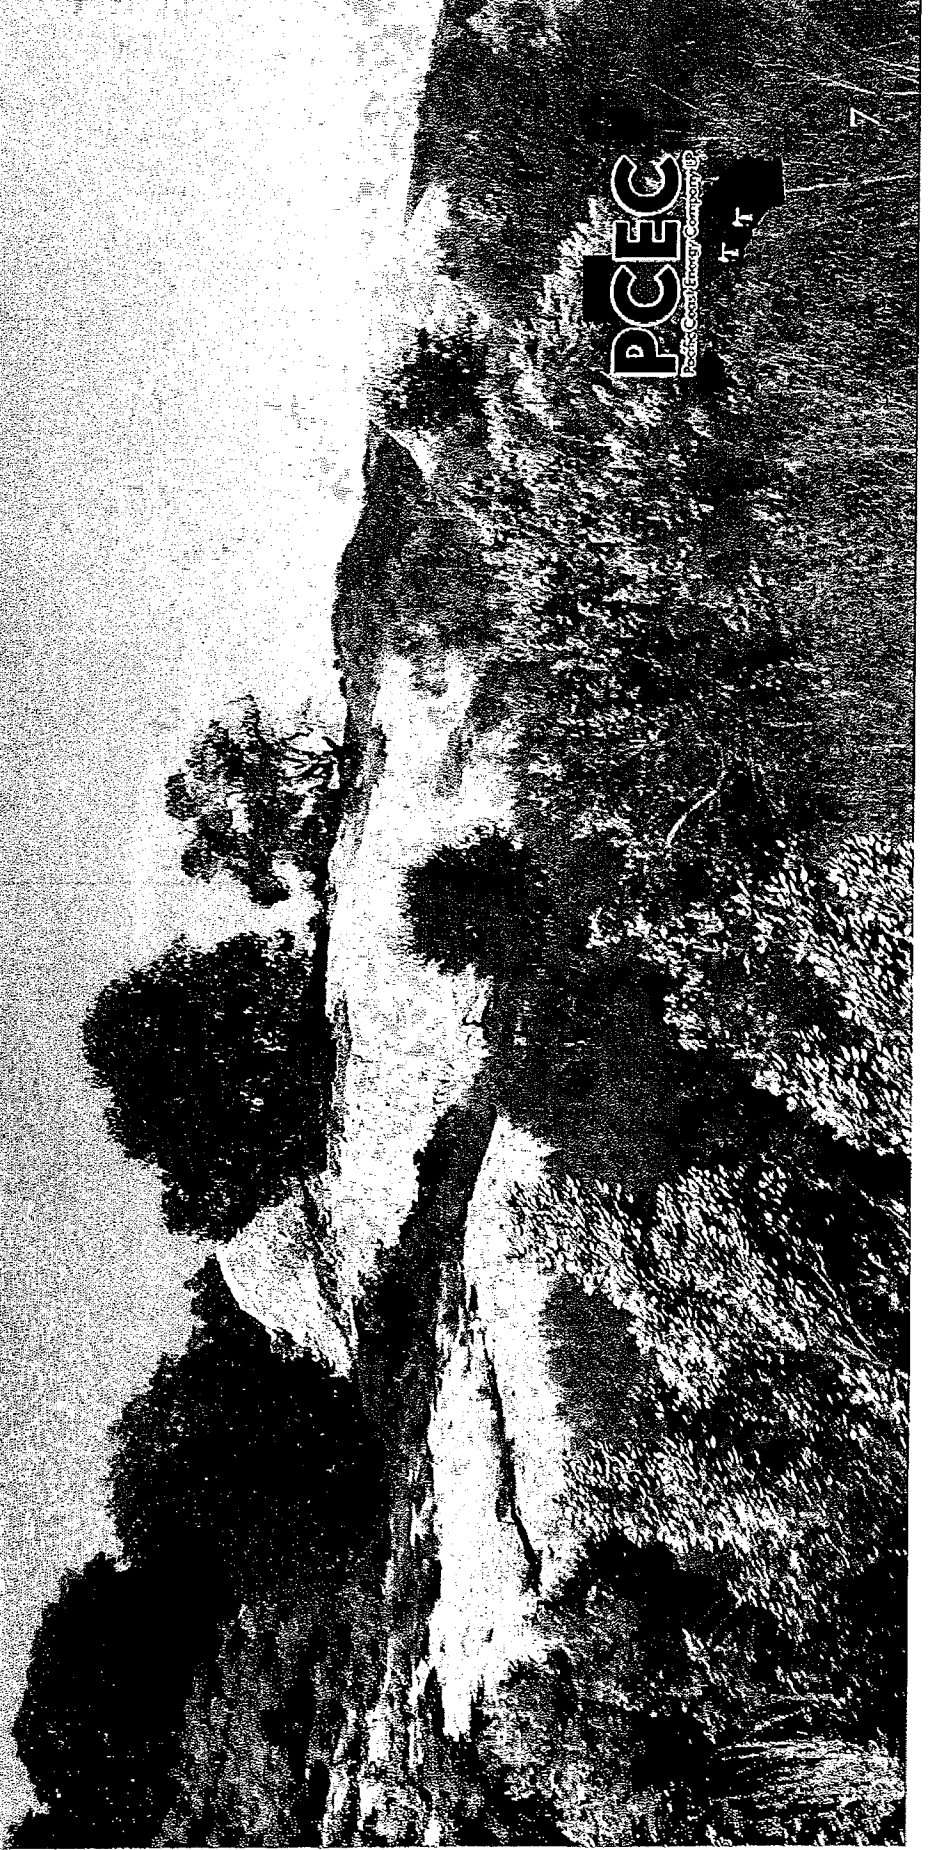

The Key Issues

- Overall economic benefits
- Careaga seeps
- Lompoc Yerba Santa proliferation
- California Tiger Salamander habitat
- Water use

Orcutt Hill

Overall Economic Benefits

PCEC
Pacific Coast Energy Company, LP

Economic Benefits to Santa Barbara County

Construction Benefits

- \$160-\$200 million of economic benefit during the construction phase

Ongoing Operation Benefits

- \$900 million - \$1.3 billion of ongoing economic benefit over the life of the project

Property Tax

- PCEC is one of the largest property taxpayers in SB County, paying \$3.7 million each year on average
- PCEC estimates it will pay over \$1.8 million - \$2.6 million in additional annual property tax attributable to OHREP

Property Taxes Paid to Santa Barbara County

Tax Year	Total Property Taxes Paid	OHREP Portion of Taxes Paid*
2011/12	\$2,728,305	NA
2012/13	\$3,700,004	\$326,629
2013/14	\$4,719,730	\$570,502
2014/15	\$4,691,692	\$584,851
2015/16	\$2,748,542	\$541,792
Total Paid – 2011-15	\$18,588,273	\$2,023,773
Average Paid Per Year	\$3,717,655	\$505,943

* The OHREP portion of taxes paid is included in the total property tax paid.

Economic Benefits to Santa Barbara County

- PCEC provides quality jobs for the working families of the region
 - Average wage is \$100,000 vs. \$48,000 in the county*
 - PCEC employs 55 people directly
 - The Project will create 35-75 new construction and drilling jobs
 - PCEC works with over 200 contractors and the project will create and maintain indirect employment as well
- The project will be covered by a Project Labor Agreement negotiated with the California Building Trades to ensure that high paying, high quality jobs are created

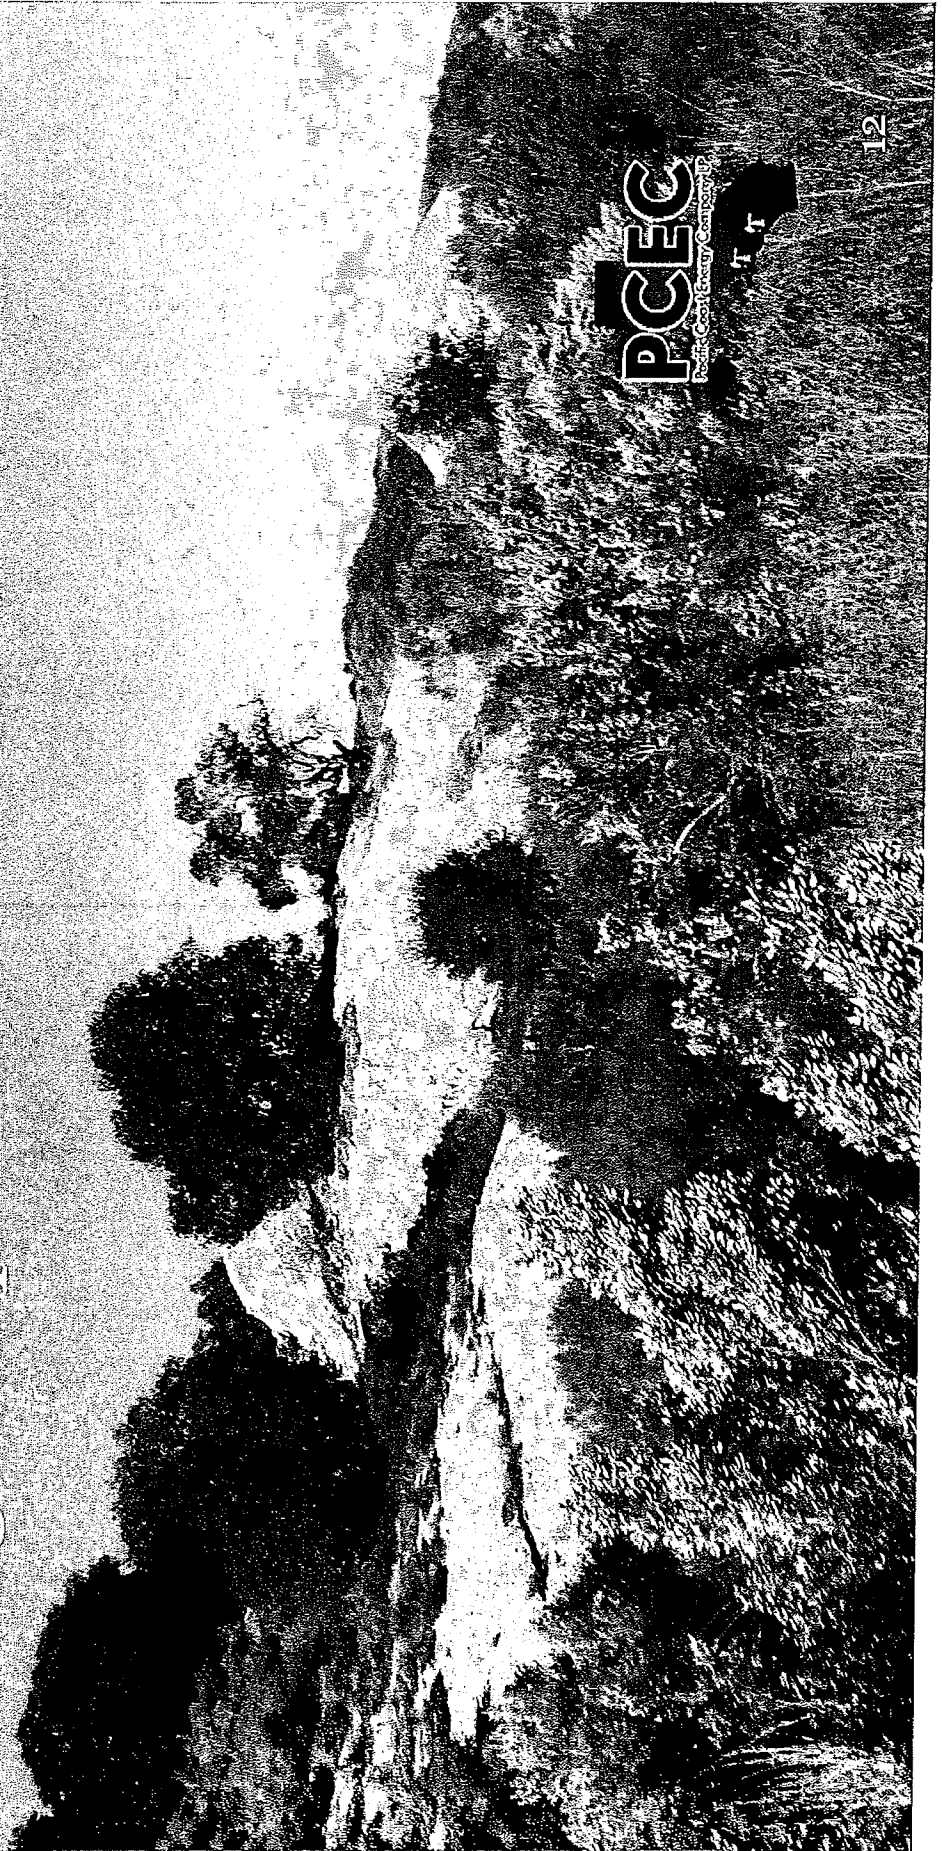

* Total annual payroll divided by total employment (2014) equals \$48,000.

Clean CA Production vs. Middle East Imports

- California is a net importer of oil
 - California consumes 1.7 million barrels of oil per day, but it only produces 550,000 barrels per day
 - Remainder is imported on rail and ships
- Central Coast oil and gas production employs 24,000 workers
- Importing oil has a greater environmental impact

Orcutt Hill

Careaga Seeps

PCEC
Piedmont Coastal Ecology Center

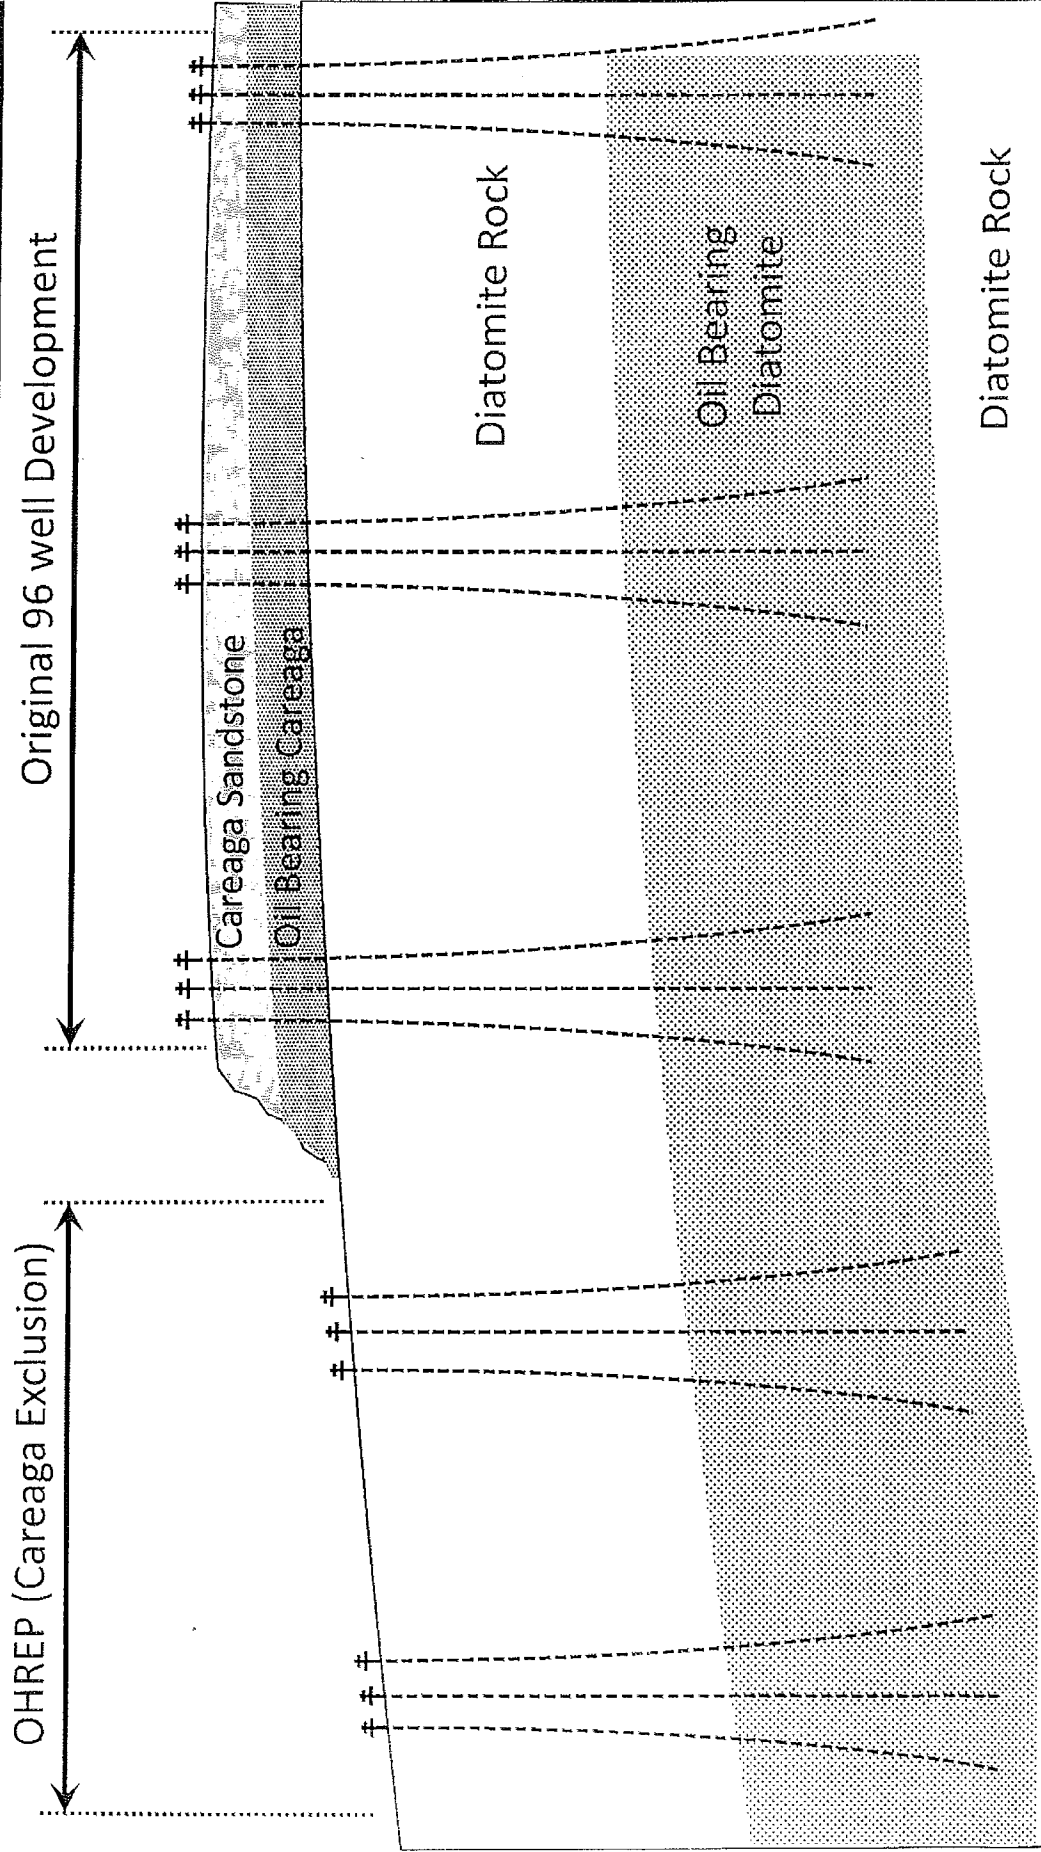

11

12

Careaga Seeps

- Orcutt Hill oil zones are as deep as 10,000 feet and as shallow as the surface.
- The shallowest zone is called the Careaga
- Careaga seeps are naturally occurring; in fact, the seeps are a main reason oil was discovered on the Hill in 1901

Orcutt Oil Field Geology

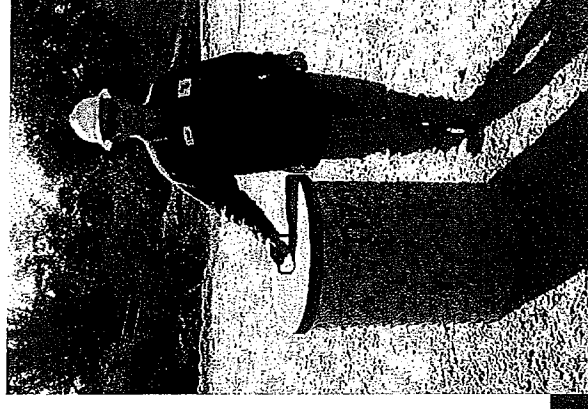

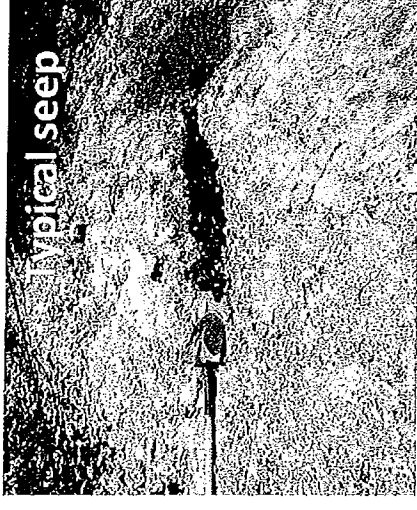

Adoption of the Careaga Exclusion Alternative

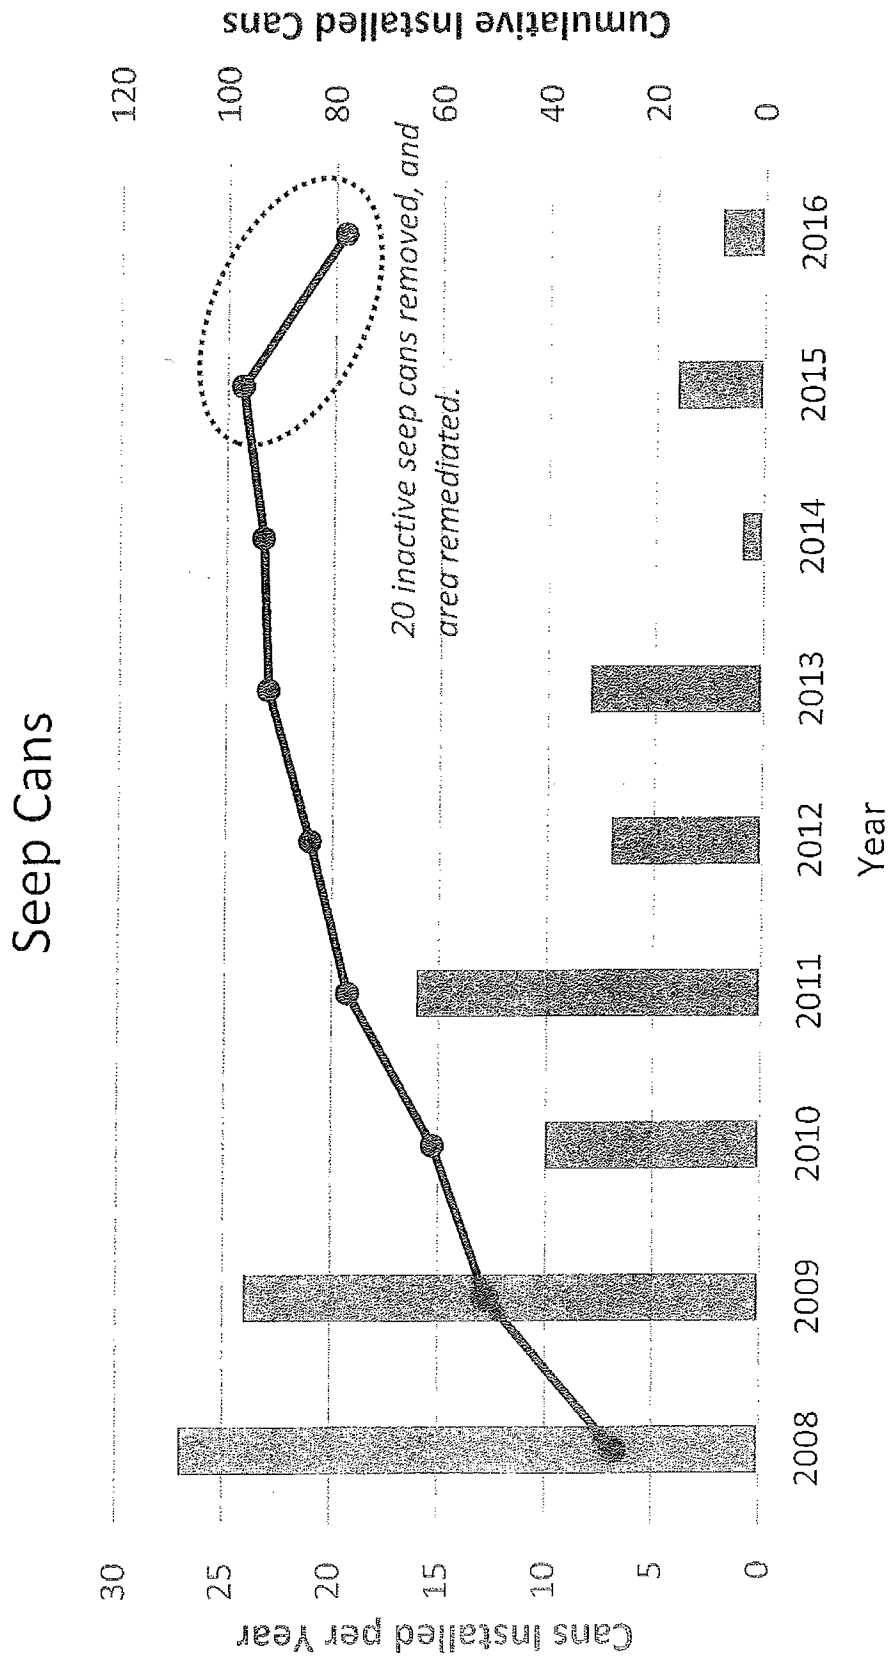

- PCEC has voluntarily decided to exclude drilling on the Careaga.
- The Careaga Exclusion Alternative was considered the Environmentally Superior Alternative by the Planning Department
- The Careaga Exclusion Alternative would eliminate drilling in the Careaga zone and therefore the possibility of seeps related to the project

New Technology Reduces Seeps, and Comprehensive Cleanup Program Minimizes Environmental Risks

- In recent years seeps have been reduced to levels normal for the geology in the area
- PCEC personnel continually monitor for seeps, responding immediately to minimize their impact on the environment
- Containment is accomplished through simple receptacles called seep cans
- Seep cans are not permanent installations

Declines in Seep Can Installation, 2008 to 2016

Orcutt Hill

Lompoc Yerba Santa

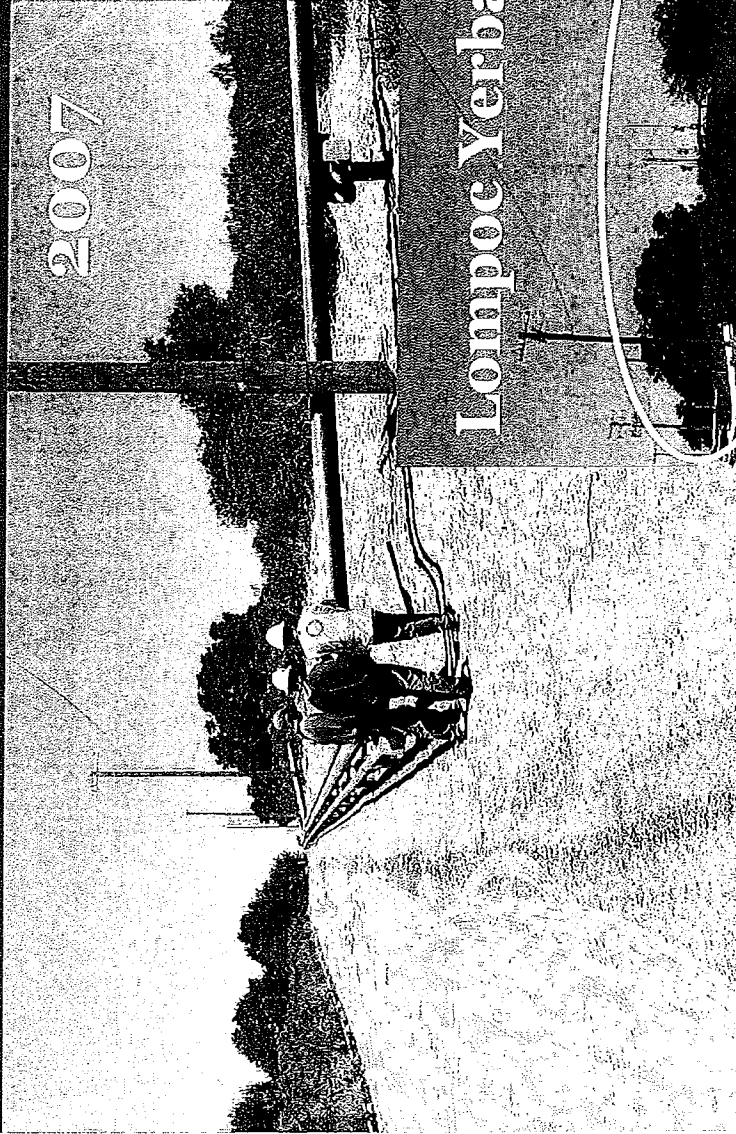

PCEC
Pacific Coast Energy Company, Inc.

Lompoc Yerba Santa (LYS)

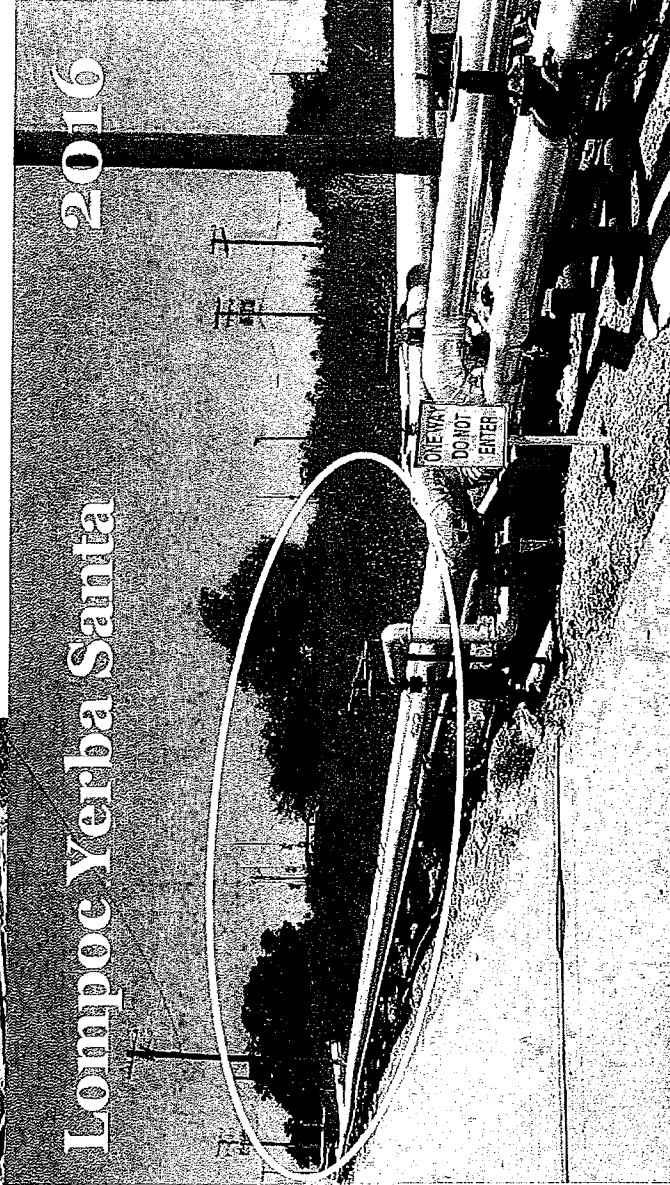

- Lompoc Yerba Santa is flourishing on the property, with nearly three times the amount of LYS today than in 2008
- LYS coverage on the site has expanded from 8 acres to 23 acres.
- Project will avoid impacts on LYS
- The EIR conservatively estimated that 360 LYS plants were removed in connection with past seep management activities; all removals will be mitigated through a Habitat Restoration Plan

Proliferation of Lompoc Yerba Santa (LYS)

2007

**2016 – LYS
Increased to
22.83 Acres**

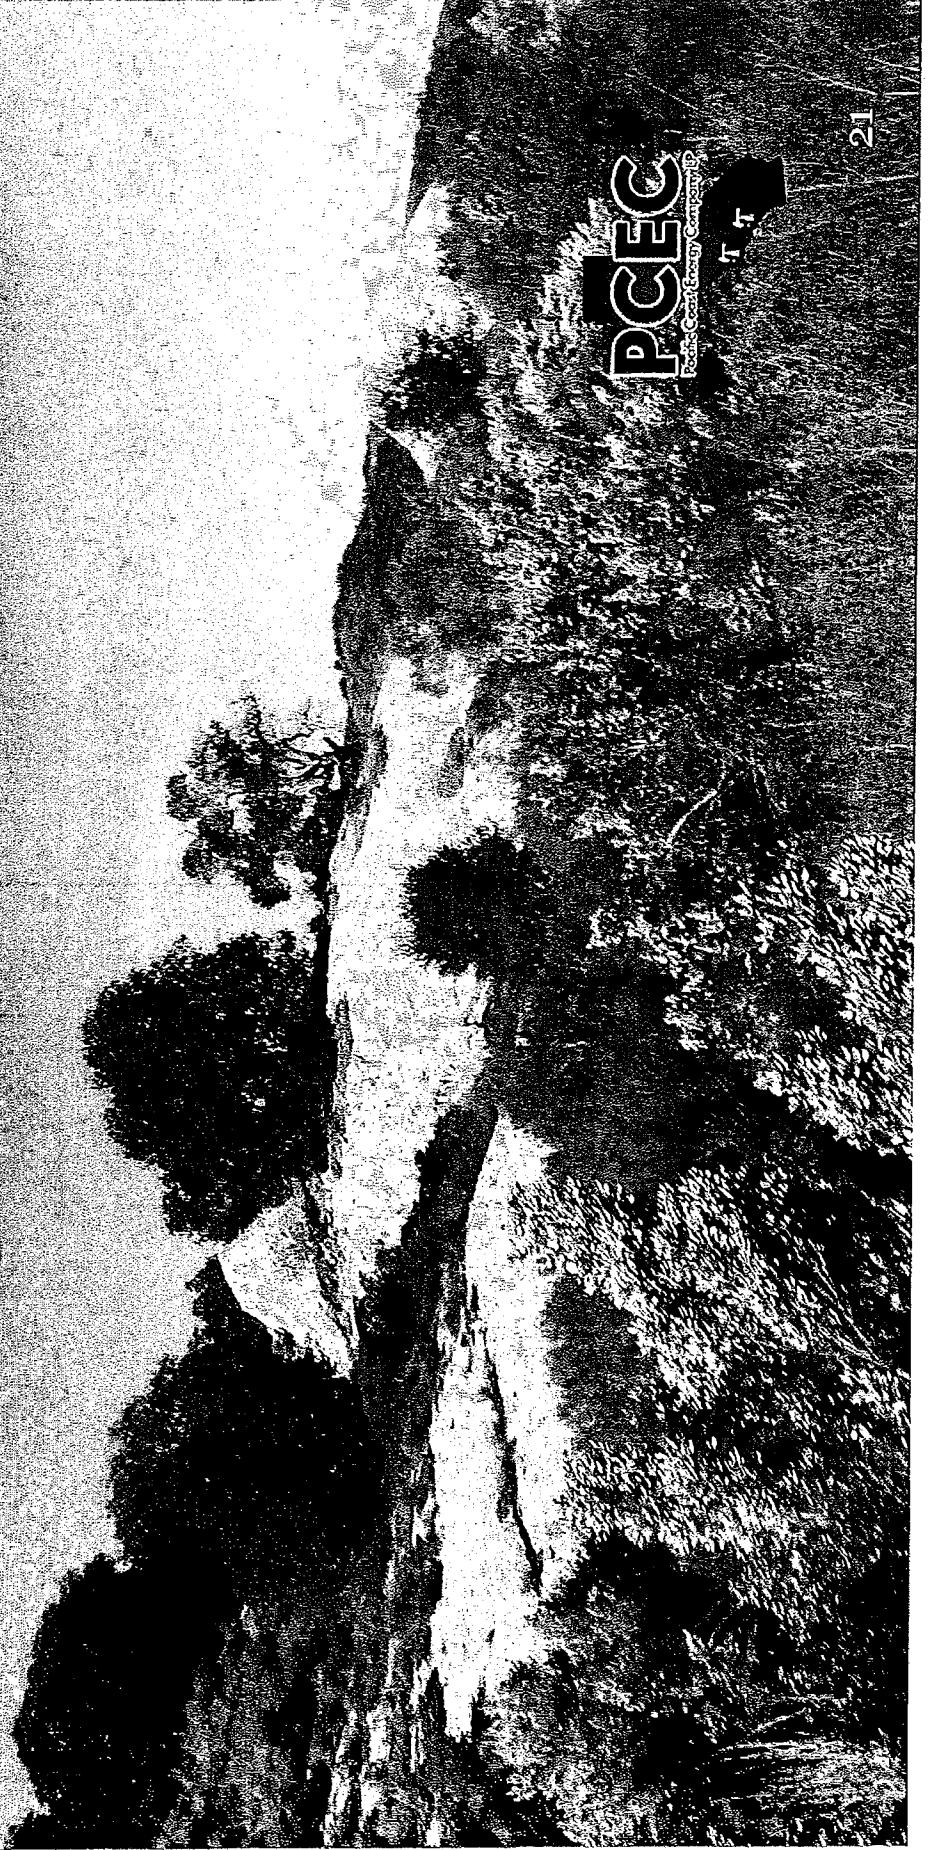

Lompoc Yerba Santa

2016

2008 - 7.85 acres

Orcutt Hill

Orcutt Hill
California Tiger Salamander

PCEC
Pesticide Control Education Center
Pesticide Control Education Center

California Tiger Salamander (CTS)

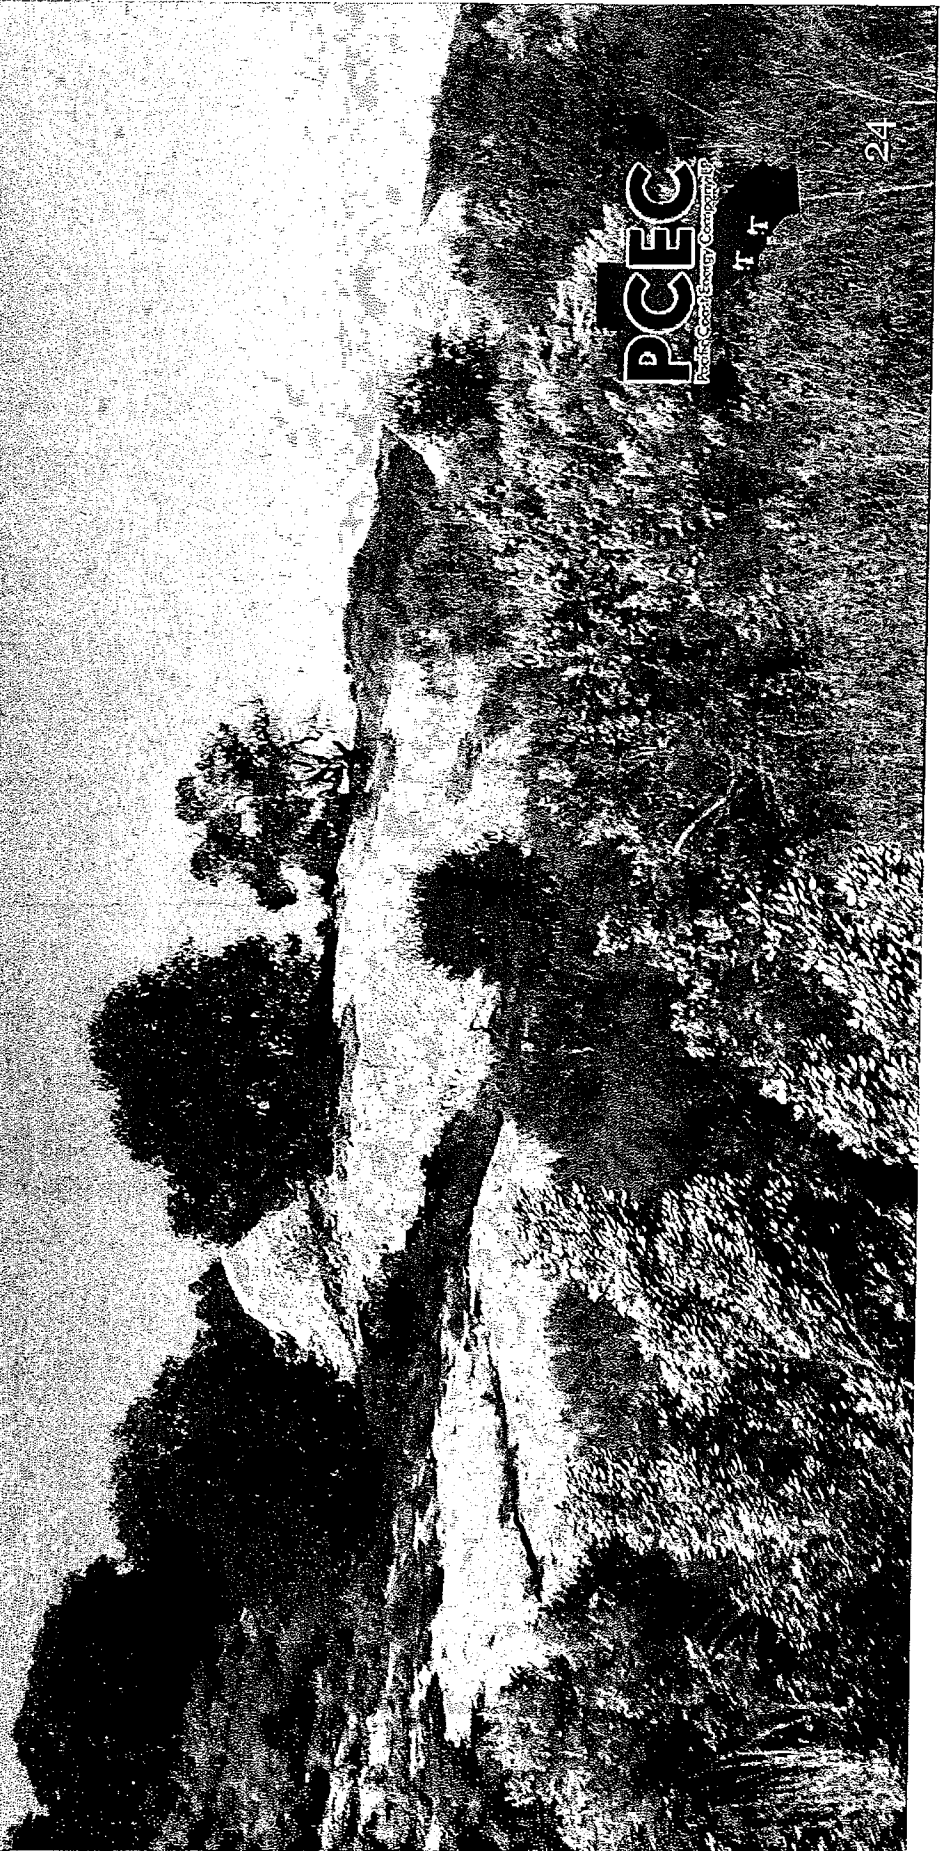

- There are no CTS breeding ponds on the project site
- The proposed project areas are located more than 2,000 feet from the two known breeding ponds on the property and at more than a 200-foot elevation change
- We are working with the USF&W Service to establish a Habitat Conservation Plan to benefit CTS

California Tiger Salamander (CTS)

Orcutt Hill

Water Use

PCEC
Pacific Coastal Ecosystem Community

Water Use

- There are no fresh water aquifers in the project area
- No fresh water is used for steam production
- The project uses brine water that is produced as a byproduct of oil production operations
- 100% of the brine water used is recycled

Orcutt Hill

Conclusions

PCEC
Pacific Coast Energy Company, Inc.

TT

What Does Approval of the Project Mean?

- \$1.8 - \$2.6 million of additional property taxes each year
- \$900 million - \$1.3 billion in economic benefit to Santa Barbara County
- New direct jobs during construction and drilling
- No increase in seeps due to expansion
- Establishment of on-site mitigation for CTS
- Proliferation of LYS, which has naturally increased with more development
- No effect on ground water

Orcutt Hill Resource Enhancement Project

October 4, 2016

Chair Adam, Supervisors Farr, Carbajal, Wolf & Lavagnino. My name is Glenn Battles, a lifelong resident of the Santa Maria Valley. I submit this letter in support of the Orcutt Hill Resource Enhancement Project (OHREP).

My family has been in this community and involved in oil and gas operations for many years. I have seen numerous oil projects and I will certainly attest that this particular project was conceived, engineered and proposed with an extreme amount of care and concern for safety and the environment. It was specifically engineered to utilize existing infrastructure as well as previously disturbed areas in order to minimize impact and disturbance. In addition, it goes without saying that OHREP will help Pacific Coast Energy Company (PCEC) continue to provide high-paying local jobs, local tax payments that provide revenue to the County, and support for many local non-profit organizations.

Testament to PCEC's forward thinking and commitment to the community is the company's teaming with the Community Action Commission (CAC) to create and implement a groundbreaking pilot program to replace old refrigerators in the County with modern, energy-saving refrigerators. This pilot program showed there could be LOCAL benefit to the environment through local greenhouse gas reduction efforts. It also benefited low-income families in our community with much more energy efficient refrigerators, thus lowering their monthly utility bill.

You must take in to consideration that Measure P was defeated by a resounding 2/3rds majority vote telling all of us that we like and want oil production to stay in Santa Barbara County for all the benefits it provides us.

This project, with its use of existing infrastructure, drilling on previously disturbed ground, and the efficiencies learned from the first 96-well project is setting a new standard for energy production and development in Santa Barbara County and beyond. I urge the Board of Supervisors to support the project as proposed by PCEC.

Thank you very much for your time.

Glenn Battles

Subject: Santa Barbara County Supervisors - Deny PCEC's Steam Fracking Project
Reply-To: Mary Turley <mtathome@cox.net>

Sep 7, 2016

Supervisor Janet Wolf
CA

Dear Supervisor Wolf,

On June 29, your Planning Commission voted 3-2 to deny Pacific Coast Energy Company's application to drill almost 100 additional steam fracking (cyclic steam injection) wells, due to numerous unavoidable environmental impacts that would result from the proposal.

I urge you to uphold their decision to deny the project, now that it has been appealed to the Board.

Please continue to move Santa Barbara County in the direction of a 100% renewable energy future by denying Pacific Coast Energy Company's (PCEC's) new steam fracking project.

We need reliable, safe jobs in the renewable energy sector; not hazardous, tenuous employment that can disappear with a decline in global oil prices or with a ruptured pipeline.

Santa Barbara and the Tri-Counties have made an excellent first step in leading our region into the first phase of a 100% renewable Community Choice Energy program. It would be incongruous to also approve the expansion of one of the dirtiest, most carbon intensive oil projects.

Protect Santa Barbara County from the unavoidable boom and bust cycles associated with an oil-based economy. Help us benefit from the growing renewable energy economy by transitioning us away from oil development.

On behalf of the climate, our economy and our health, I urge you to deny the Pacific Coast Energy Company's proposal, in favor of a swift transition to a clean and prosperous energy future.

Sincerely,

Ms. Mary Turley

Re: Case No. APL-00000-00020

Dear Supervisors:

Teamsters 42 Joint Council represents nearly 150,000 active Teamsters and retirees. We have many members who live and work in Santa Barbara County. On behalf of my membership, I urge you to support the Pacific Coast Energy project in Santa Maria.

The oil and gas industry is important to California. With oil prices where they are, we are not seeing many oil companies seek to expand their operations. And by no means do we advocate for approving every oil and gas project, we do advocate for the ones that we feel are good for the communities our members live in.

We are supporting the Pacific Coast Energy Project because it will bring much needed revenue and good jobs to the county. In addition, this project was significantly amended to take into account environmental feedback offered through the planning process.

Please consider supporting this project.

Very truly yours,

Randy Cammack, President
Teamsters Joint Council 42

RE: Case No. APL-00000-00020

Dear Supervisors:

I am writing in reference to the Pacific Coast Energy project that will be considered by the Board later this fall. I represent the members of the Tri-County Building and Construction Trades Council-many of who live and work in Santa Barbara County.

We are committed to supporting projects that will move our region forward and create good jobs. We are proud to support the Pacific Coast Energy Project, as it will do both.

Oil extraction is important to our entire coastal region as well as the State of California. Extraction creates hundreds of thousands of jobs and billions of dollars in revenue for essential services in our area and around the State.

I understand that the Planning Commission voted to deny this project. Based on the concerns of the Planning Commission, this project has been significantly amended to take into account the concerns that were voiced in that process.

On behalf of my membership, I urge the Santa Barbara County Board of Supervisors to reject the recommendation of the Planning Commission and support this important project as amended.

Very truly yours,

Tony Skinner

CA

Dear Supervisor Wolf,

On June 29, your Planning Commission voted 3-2 to deny Pacific Coast Energy Company's application to drill almost 100 additional steam fracking (cyclic steam injection) wells, due to numerous unavoidable environmental impacts that would result from the proposal.

I urge you to uphold their decision to deny the project, now that it has been appealed to the Board.

Please continue to move Santa Barbara County in the direction of a 100% renewable energy future by denying Pacific Coast Energy Company's (PCEC's) new steam fracking project.

We need reliable, safe jobs in the renewable energy sector; not hazardous, tenuous employment that can disappear with a decline in global oil prices or with a ruptured pipeline.

Santa Barbara and the Tri-Counties have made an excellent first step in leading our region into the first phase of a 100% renewable Community Choice Energy program. It would be incongruous to also approve the expansion of one of the dirtiest, most carbon intensive oil projects.

Protect Santa Barbara County from the unavoidable boom and bust cycles associated with an oil-based economy. Help us benefit from the growing renewable energy economy by transitioning us away from oil development.

On behalf of the climate, our economy and our health, I urge you to deny the Pacific Coast Energy Company's proposal, in favor of a swift transition to a clean and prosperous energy future.

Sincerely,

Mrs. Erin Bonski

Subject: PCEC Orcutt Hill Oil Project - Deny Appeal

Dear Supervisor Wolf,

I am asking that you deny the appeal of the PCEC Orcutt Hill Oil Project.

1. The Planning Commission carefully considered this project and rejected it because of the significant, unmitigated Class I impacts to Air Quality, Endangered and Sensitive Species, Critical Habitat and Water Quality. County Staff also recommends rejecting the appeal and only approving the emergency seep cans that are necessary to address the on-going seep problem from existing operations.
2. Cyclic Steam Injection method has a high well casing failure rate and there is a history of eruptive well failures at the site. The drilling would occur in an area that is already suffering extensive damage from 100 accidental oil seeps to date. The State predicts at least another 225 seeps in the next 25 years if the Project is approved.
3. The Project site is one of the most biologically rich locations in Santa Barbara County. The Project's oil seeps would potentially drown the endangered California Tiger Salamanders and destroy some of the rarest and most imperiled plant communities in the world, such as the Southern Bishop Pine forest and the Burton Mesa Chaparral. It will also have an irreversible impact on endangered Lompoc Yerba Santa plants, found in only 6 locations in the world.
4. The environmental review found significant and unavoidable risks to our water. The Project site is on a hill that intersects Orcutt creek and others that flow to the San Antonio Lagoon and Pacific Ocean. The recent Refugio oil spill demonstrates the immense risk and costs of oil spills.
5. The County cannot justify overturning the Planning Commission 's decision and Staff recommendation of denial. The Project does not supply any benefits that will outweigh the potentially substantial and irreversible environmental harm from allowing PCEC to double its cyclic steam drilling operations on Orcutt Hill. Thus, the County cannot legally justify approving the Project with a Statement of Overriding Considerations.

Respectfully,
—Doug Fischer
