Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Deshay Steel

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Susan Kerstein

The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Judy Smith

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Suzanne Chin

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

barbara hebert

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Marivee Frayer

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Anthony Cossa

Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Kevin Carraher

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Joseph Eaton

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Michael Odinlo

The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Leo Sandoval

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Virginia Tapia

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Cardie Molina

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Dayna Moore

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Henry Ross

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Michael Houtz

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Barbara Diaz

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Diana Haskins

Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

donald conley

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

James Dobson

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Scott Lee

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Enrique Valadez

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

BOBBY WEBSTER

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Ronald Clarino

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Peter Yanez

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

BLANCA CHAVEZ

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Martha Bernal

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

fidencio medina

Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Irma Gutierrez

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

Sable Offshore Corp. Permit Transfer Hearing

November 4, 2025

Dear Supervisors,

I am writing to urge you to approve the permit transfer of the Santa Ynez Unit (SYU) assets and Pacific Offshore Pipeline Company (POPCO) facilities to Sable Offshore.

From the start, Sable has been committed to supporting the people of Santa Barbara County and ensuring that all restart preparations and repairs met or exceeded requirements.

Sable's facilities provide hundreds of skilled, family-sustaining jobs, many filled by local residents. This includes unionized operating

engineers, laborers, Teamsters and welders/pipefitters. Once operational, Sable estimates creating an additional 300 jobs with family-sustaining wages.

Sable's project has already created an economic ripple that positively impacts small and local businesses that support construction and drilling operations. Additionally, Sable's project will benefit Santa Barbara County, with an estimated \$5 million in annual tax revenue.

Sable has invested tens of millions of dollars and thousands of labor hours to make the pipeline system as safe and modern as any in the country. Sable continues to work diligently with the State of California to safely and responsibly resume petroleum transportation through the Las Flores Pipeline System in accordance with the Federal consent decree.

The Sable team is comprised of seasoned oil and gas operators with the skills and training necessary to operate the facilities safely. The management and executive team have worked together in the Santa Barbara area for more than 20 years. Upon acquiring the systems, they immediately got to work ensuring all employees and contractors received adequate cross training and also to revise their well-established protocols and practices to meet or exceed all applicable local, state and federal regulations.

With California's gas prices on the rise, and state refineries on the brink of closure, there is one clear, easy, and safe solution – Sable's Santa Ynez Unit and Las Flores Pipeline System. Sable represents the only

immediate opportunity California has to bring additional crude online, stabilize supply and lower consumer gasoline prices. But this won't be possible without the permit transfer.

The Santa Barbara County Planning Commission voted to approve Sable's permit transfer a year ago. I am respectfully asking you to honor that.

Sincerely,

Robena James
