

WATER SOURCE & WATER DEMAND (Revised)
NOJOQUI FARM CANNABIS PROJECT
1889 S. Highway 101, Buellton, CA
JUNE, 2022

PROJECT DESCRIPTION

The Nojoqui Farm cannabis project is located approximately 3.5 miles south of the City of Buellton in Santa Barbara County, California (Figures 1A). The project consists of up to 25.93 acres of various cannabis operations, including 21.55 acres of outdoor cultivation under hoops, 2.61 acres of outdoor cultivation without hoops and 1.54 acres of nursery cultivation under hoops. The project will be located on the Nojoqui Farm property (APN 083-430-014) at 1889 US Highway 101, Buellton, California. There is an existing water delivery system that has been in place for over 50 years that delivers water primarily to this property (consisting of 53 acres), but also to the adjacent 33 acre property (083-430-031). These parcels are collectively referred to as the Nojoqui Property. This system consists of three water wells and separate components for agricultural use and for domestic (potable) use.

This memorandum analyzes (1) whether the water system produces water from or impacts Nojoqui Creek, and (2) the overall project water demand. In response to (1), the evidence shows that the water system does not impact Nojoqui Creek but produces water from a groundwater source not a riparian source, and (2) the project water demand is 24.4 acre-feet per year (AFY), which is a significant reduction in the baseline water consumption compared to the historical organic farming operations.

LOCATION

The subject property lies in the southwestern part of Santa Barbara County, California within the east-west trending Santa Rosa Hills, which comprise the foothill area along the north flank of the Santa Ynez Mountains (Figure 1B). The parcels are situated between US Highway 101 on the east and Nojoqui Creek on the west, lying 4 miles south of Buellton and 4 miles north of Gaviota Pass (Figure 2). The area topography varies greatly from 500 feet in the narrow creek floodplains to greater than 2400 feet along the mountain ridges to the south (Figure 4). The two Nojoqui parcels consist of 53 acres and 33 acres respectively; the project will be located

entirely on the 53 acre parcel (083-430-014). The range of elevation for this generally flat-lying property is 560 to 600 feet above sea level. Land use in this area surrounding and including the Nojoqui parcels is primarily row crops, while the more steeply sloping area properties are utilized for grazing.

GEOHYDROLOGY

Geologically, the Nojoqui Farm parcels are located in an east-west trending fold belt that makes up the northern flank of the Santa Ynez Mountains. The area is underlain primarily with consolidated older sediments of the Cretaceous and Mid-Tertiary aged rocks (Figure 5). These Mid-Tertiary rocks, including the Matillja, Cozy Dell, Gaviota and Sacate Formations, typically do not contain large volumes of groundwater, lacking enough porosity and permeability to hold significant water (Figure 6A&6B). However, where these units do contain water is usually associated with overlying groundwater, such as that found in alluvial sediments in rivers, streams and drainages. In the older sediments water quantity is typically smaller and the water quality is fair (non-potable). To the north in the Santa Ynez River Basin the primary water-bearing sediments are usually part of the recent Alluvium and the Plio-Pleistocene Careaga and Paso Robles Formations. However, in the Nojoqui Farm area the sands and gravels of the Careaga and Paso Robles units are absent in the region south of the Santa Ynez Basin having been eroded off and/or never deposited here. Consequently, the primary ground water sources here are the shallow alluvial sediments that overlie the older rocks. Varying in thickness from 10 feet to 200 feet, these alluvial sediments have formed over time due to erosion of the surrounding older rocks and the deposition of eroded clays, silts, sands and gravels into the low-lying areas within the drainages of the local creeks and streams. A regional cross section (Figure 7) shows the disposition of the younger sediments and their relationship to the complex, tectonically folded and faulted older sediments associated with the Santa Ynez Mountain Range to the south. A second north-south cross section shows the local details of the above-mentioned shallow sediments relative to the underlying older rocks (Figure 8).

Hydrologically, the Nojoqui property is located outside of any State Water Resources Control Board designated groundwater basin and is well south (3.5 miles) of the Santa Ynez River Basin. However, the subject land is within a small intermontane basin where ground water is associated with an erosional depression of limited extent containing various thicknesses (10-200 feet) of young, Quaternary alluvial sediments associated with the area's streams, creeks

Page 3

Water Source & Water Demand

Nojoqui Farm

June 2022

and drainages. The Nojoqui Farm is bordered on the west by Nojoqui Creek and the east by US Highway 101. The primary ridgeline of the Santa Ynez Mountain Range lies between the subject property and the Pacific Ocean, which directs runoff from the significant drainage to the north toward the Santa Ynez River. The estimated watershed for the Nojoqui Creek is approximately 20 square miles, a fairly large drainage area for a small basin. Consequently, recharge to the area alluvial aquifers is mostly from winter rainfall/runoff and creek water infiltration, as well as some contribution from area irrigation seepage.

Additional details on the local geohydrology, including the well testing, pump testing curves and downhole pump specifications, can be found in the hydrology report prepared for Santa Barbara County Environmental Health Services as a part of the application/permit for a Single Parcel Water System (SPWS) (See Appendix). This SBCEHS hydrology report is available if needed from Santa Barbara County EHS.

WATER SYSTEM SUMMARY

The existing water system for Nojoqui Farm has been in place since the mid-1960's and consists of three water wells and an associated water distribution system as described below. The Nojoqui Farm water system services both the domestic (potable water) side of the system, as well as the agricultural (irrigation) components. The domestic portion of the system was recently permitted with Santa Barbara County as a single parcel water system, which supplies water to two connections, the primary farmhouse and the packing shed/office. The irrigation side of the system is separated from the domestic portion in order to prevent any cross contamination (see plot plan in Appendix). The irrigation system currently reaches across the entirety of the primary Nojoqui parcel (APN 083-430-014) and into the adjoining 33 acre property (APN 083-4430-031) to the north as well, which is also under contract to Nojoqui Farm.

The primary water source for this system is the Main Well, which is located within an easement on a separate parcel, APN 083-430-015, known as the Well Property (Figure 3). This Well Property was subdivided from the Nojoqui Property (APN 083-430-014) in 1964 and included easements for the Main Well and the associated water system pipeline. In 1965 the main farmhouse was built, and the various parts of the water system were constructed over the years to serve both the agricultural and domestic needs of the Nojoqui Property. Based on a review of historical records, it is my understanding that the Main Well has exclusively been used for the Nojoqui Property.

MAIN WELL

The Nojoqui Farm Main Well was drilled in 1964 to a depth of 76 feet. The well was completed with 8-inch steel casing to a depth of 55 feet. The production perforations were steel (Mills) knife cut from 44 ' to 49', which corresponds to a permeable water zone at the same depth. The standing level or static level following the completion of this well was measured at 30 feet (Well Completion Report in Appendix). However, it is likely that the older sediments from 50 feet to 76 feet are also contributing groundwater to the Main Well's productive capacity, as there is no restriction to potential flow from the bottom of the casing at 55 feet and from the sediments in the open borehole below the casing. A cement sanitary seal was placed in this well from 22 feet to the surface. The primary purpose of this seal is to prevent any surface or near surface water from entering the well and to prevent any potential contamination from wildlife.

A pump capacity test was performed in April of 2020 on the Main Well. The well was pumped continuously for a period of 4 hours at an average flowrate of 100+ gallons per minute (gpm). While the well is capable of producing at a higher rate (approx.. 150-250 gpm), there was no reason to pump the well at a maximum rate since the actual specific capacity of the well was unknown before the testing. The lower flowrate of 100+ gpm was also chosen so as to not overflow the 30,000 gallon storage tank during testing. In addition, Santa Barbara County EHS allows the onsite hydrologist to determine the needed pumping period and pumping rate when a well has a stable pumping rate of over 50 gpm. Likewise, State and County regulations do not allow extracted water during a test to flow on the ground near a riparian area.

The static water level was measured at 12.5 feet and the stable pumping level was 22.8 feet after 4 hours of testing. The well was also produced into the existing storage tank during the test, in order to avoid flowing the well onto the ground and into the riparian area, which is prohibited by both State and County regulations. Four hours of testing resulted in a stable pumping level and at the time was considered adequate to establish the overall capacity of this well to produce water over the long term. A short recovery period of only 30 minutes was observed following the cessation of pumping, as the fluid level rose quickly back to the starting static water level (12.6 feet) (pump Test Data in Appendix).

Due to the proximity of the Main Well to Nojoqui Creek, monitoring of the surface water level in the creek occurred during the pump testing of the Main Well. No significant changes were observed in the creek level other than minor fluctuations (less than ¼ of an inch) that would normally occur during the day due to changes in sunlight, changes in daily temperature and evaporation rate, and changes in atmospheric pressure. The static levels of two nearby wells

were also monitored. A shallow well open to the atmosphere and containing no pump, no piping and no electrical, known as the Wishing Well, is located 80 feet from the Main Well to the northwest. A second idle well (Farmhouse) 700 feet to the northeast behind the primary farm residence of Nojoqui Farm was also monitored. A drop of 0.5 inches in the static level was observed in the Wishing Well, however the static level returned to the beginning level within 5 minutes after pumping stopped.

During testing no change occurred in the Farmhouse Well. A water sample was taken at the end of the Main Well testing and submitted to Fruit Growers Lab for analysis. The water passed for all of the drinking water constituents necessary to establish this water source as potable.

SECONDARY WELLS

Two additional water wells are available to serve the subject Property. These wells are located on an adjacent property to the north, which is a 33 acre parcel (APN 083-430-031) that is also being purchased by the applicant, Nojoqui Farm and is referred to as the Sunburst property. Historically, the wells have been utilized as an irrigation supply for organic farming on both the Nojoqui Farm parcel and the Sunburst parcel and are tied into these lands via an existing easement and pipeline system over Nojoqui Creek. This has allowed water to flow to both parcels, depending on the needed water demand of each parcel. A map of the these well locations and the pipeline system is included in the Appendix.

Known as Moonshine #1 and Moonshine #2, these wells both produce water from the older sediments, not the younger alluvial sediments (Well Completion Reports in Appendix). Moonshine 1 was drilled in November of 1995 to a total depth of 180 feet. The well was completed with 6 inch steel casing run to 180 feet. The perforated or screened interval was 60 feet to 180 feet. A cement sanitary seal was placed from 60 feet to the surface. A 12 hour pump test on this well recovered water at a rate of 50 gallons per minute (gpm). Additionally, the well location is on the edge of the Tertiary Cozy Dell Formation outcrop (surface) so some of the shallow penetrated sediment layers are likely erosional remnants of the older sediments that are not connected to Nojoqui Creek (Well Completion Report in Appendix). The Moonshine #1 is located 500 feet from Nojoqui Creek. The static water level was recorded at 25 feet below grade; well below the elevation of nearby Nojoqui Creek. The Moonshine #2 Well was drilled in October of 2016 to a total depth of 800 feet. The well was completed with 6-inch PVC casing that was landed at 800 feet. The well's screened interval was from 260 to 800 feet

Page 6

Water Source & Water Demand

Nojoqui Farm

June 2022

with a 51 foot cement sanitary seal. Consequently, there is no connection to the creek, as the shallow alluvial sediments are cemented off by the seal and therefore are not included in the perforated interval. This well yielded 25 gallons per minute on an abbreviated pump test. Chemical analyses on the water extracted from the Moonshine #2 was performed in 2016 and again in 2020 indicated a decent water quality for agricultural purposes. However, the water would require some treatment in order to be utilized for domestic purposes.

Permitting and planning for an additional back-up well on the Nojoqui parcel (APN 083-430-014) has been completed with an estimated completion date of June 2022. This well has been permitted and planned for the Property and will be located near the idled water well behind the farmhouse. At this time no projected water flowrates or volumes for this future well have been added to the project. The existing wells are more than adequate to meet the project water demand, so this proposed well will only be a back-up for cultivation at Nojoqui Farm.

ORIGIN OF PRODUCED WELL WATER

One of the primary questions being addressed here is whether the water supplied to the Nojoqui Farm operations is surface water or groundwater. The answer is percolating groundwater. The evidence supporting a determination of a groundwater is as follows:

1. The recent pump test on the Main Well showed no influence on the nearby Nojoqui Creek. The creek level and the static levels of two nearby wells were monitored throughout the test period and no significant changes were observed.
2. Following the termination of the Main Well pump test, a 30 minute recovery period was observed with the water level returning to the static level measured at the beginning of the pump test. A failure of the recovered water level to return to the depth of the beginning static level would have indicated a major loss of water from the aquifer and a subsequent drop in the creek level. None was observed.
3. When the Main Well was drilled and completed the static level was 30 feet below grade, which is well below (26 feet) the elevation of the surface water in Nojoqui Creek, indicating a lack of a direct connection in the subsurface with the creek surface waters.

4. The subject Nojoqui Main Well contains a confining clay layer from near surface to 37 feet. This clay layer is mostly impermeable and will not readily transmit water downward into the water-bearing sediments below it. This clay zone likely also confines the subsurface flow from communicating directly with the surface flow (Figure 10).
5. In support of Statement #4 above, there are different water chemistries between the surface water of the creek and the water-bearing sediments below the confining clay layer. The chemical analysis on the creek surface water is pending, but a hand-held Total Dissolved Solids (TDS) meter indicated a TDS or salinity level of 300 parts per million (ppm) versus 860 ppm for the recently tested groundwater being produced from the Main Well. A significantly different value for salinity further indicates that the subsurface water produced by the Main Well is not communicating at this location with the surface waters from the Nojoqui Creek.
6. One of the key tests for determining whether the Nojoqui Well is producing surface water versus groundwater is the four-part Garrapata test (SWRCB), which states that for water flow to be classified as a subterranean stream flowing through a known and definite channel, the following physical conditions must exist: (a) a subsurface channel must be present; (b) the channel must have a relatively impermeable bed and banks; (c) the course of the channel must be known or capable of being determined by reasonable inference; and (d) water must be flowing in the channel.

In the case of the Nojoqui Well the hydrogeological conditions that exist do not meet the Garrapata criteria of Parts b and d. The channel of Nojoqui Creek is underlain by permeable sediments of the Tertiary Sacate/Gaviota Formation, which is water-bearing and productive in area water wells to the north of the subject Nojoqui Main Well; and likely contributes groundwater to the overall flow from the Main Well. As for Part d, the subsurface water within the alluvial sediments penetrated by the Nojoqui Well does not continue flowing north in conjunction with the Nojoqui Creek surface water, which flows north 3.5 miles to the Santa Ynez River. The subsurface water in the alluvial sediments below the confining layer is ponded behind the area's older sediments which outcrop at the surface north of the Nojoqui Main Well. This bathtub effect is shown in the north-south cross section in Figure 10.

HISTORIC WATER DEMAND

Nojoqui Farm was a certified organic farm from 1992 to 2017. The detailed water consumption records for 2010 through 2016 have been reviewed and are incorporated into this report (Appendix). The total water usage from 2010 -2016 averaged 106 AF per year. However, only the water use from the Main Well was recorded as the backup wells, Moonshine #1 and Moonshine #2 did not have flowmeters installed and only were used to irrigate the northern 33 acre parcel. After recent discussion with the former water master for the Nojoqui Farm, it was determined that the Main Well was utilized for irrigation on both the Nojoqui Farm parcel (APN 083-430-014) and the Moonshine Canyon parcel (083-430-031). The total amount of irrigated acreage from 1992 to 2017 varied from 40 acres to 50 acres; 25-28 acres on the primary parcel (APN 083-430-014) and 15-20 acres on the adjacent parcel (APN 083-430-031). The average acreage farmed on the Nojoqui parcel was 28 acres and 15 acres on the Moonshine parcel. However, in the last 10+ years these parcels were only farmed together in years 2010 through 2012. From 2013 through 2020 only the main Nojoqui parcel was farmed. A water consumption chart was prepared that covers 2010 through 2021 in order to determine the water use for only the Nojoqui parcel (APN 083-430-014). **The 10 year average equaled 51.5 acre-feet per year (AFY). The Nojoqui Farm water consumption varied from 1.62 acre-feet per acre (AF/AC) to 3.26 AF/Ac during this time frame. If one eliminates the no farm/no data years, then the 10 year average is 63.3 AFY**

After the death of the lead grower/farm manager in 2017 the organic farming operation ceased to exist. In its place approximately 20-25 acres of oat hay was grown instead of row crops in 2017-2018. Unfortunately, there are no detailed records for water use in those years, but an estimate of 50-75 AFY is being supplied based on a water use factor of 2.5-3.0 AFY/acre for oat hay. The property was farmed in hemp in 2019, but only on a limited basis (5 acres) with an estimated water consumption of 9 AFY. The farm ground was left fallow in 2020.

PROJECTED WATER USE

The recent UC Ag Extension data for water consumption for row crops in Santa Barbara County lists a value of 2.5 acre-feet per year per acre (AFY/Ac) for these crops. San Luis Obispo County utilizes 1.9 AFY/Ac for these same crops. From researching recent water consumption on several area cannabis operations, it appears as though the water demand estimates for cannabis have been grossly overstated at 1.9 to 2.0 AFY/Ac. The recently presented water demand for the CCA project on Santa Rosa Rd. to the Board of Supervisors revealed a demand

Nojoqui Water Consumption Chart

Year	Total AF Pumped	Total Acres Irrigated	Water Use AF / AC	Nojoqui* Net Water Use AF / AC	Nojoqui Net Water Use AFY
2010	114.9	43	2.67	1.74	48.7
2011	164.7	43	3.83	2.49	69.7

Nojoqui Parcel - 53 ACs Total; 28 ACs Farmed
 Moonshine Parcel - 33 ACs Total; 15 ACs Farmed

- (a) Only six months of irrigation
- (b) Estimated water pumped from water consumption factor for oat hay (2.5 AF / AC)
- (c) Estimated water from water consumption factor for hemp (1.9 AF / AC)

* Nojoqui Parcel = 65% of total when both parcels farmed

** Eliminating no data / no farming years AF/AC = 2.26 or 63.3 AFY

Page 9

Water Source & Water Demand

Nojoqui Farm

June 2022

factor of approximately 0.50 AFY/AC for two crop cycles or 0.25 AFY/AC per cycle. This project is growing in-ground, similar to the Nojoqui project. This data was based on accurate water metering and recordkeeping and also involved the use of state-of-the-art drip irrigation and mulching for in-ground cultivation. Additionally, a second project also on Santa Rosa Rd., where Katherman Exploration Co. is the hydrologist, has hard data over the last three years of growing cannabis both in-ground and in pots. This data indicates a demand factor of 0.6 – 0.7 AFY/AC again for two crop cycles or 0.3-0.35 AFY/AC per cycle. Consequently, in order to be conservative with a water use estimate for Nojoqui Farm, **the proposed Nojoqui water demand will be 1.2 AFY/AC for three crop cycles or 0.40 AFY/AC per cycle.**

As was mentioned in the original report from March 2022, it critical to understand the soil conditions on Nojoqui Farm and the moisture retention properties that allow a less frequent irrigation schedule for farming; and therefore a lower water demand per acre without the use of artificial or manufactured soils. Through discussions with the former crop managers at Nojoqui, it appears as though the watering frequency for years for the organic row crops was every 4 days rather than every 2-3 days as is the case in the Lompoc and/or Santa Maria Valley farming areas. Consequently, it is critical to understand the predominate soil type at Nojoqui Farm and how it affects water usage.

A specific soil type known in the literature as the Sorrento Series is common to the Nojoqui Creek area and covers the surface of the Nojoqui Farm parcels. This soil horizon is described in the USDA's "Soil Survey of Northern Santa Barbara Area, California" as well drained, grayish-brown sandy loam to clayey loam. These soils occur extensively on floodplains and alluvial fans in several areas of Northern Santa Barbara County. This is key to estimating water demand for the project as this soil type consists of a significant content of fines, i.e. silt and clay (30-40 %), and will therefore retain a greater moisture percent than most area soils. This further supports the projected lower water demand for the Nojoqui Farm operations.

From the recent adjustments in total acreage under cultivation listed in the project description the total net acres is now 21.87 acres. All of the cultivation will be under hoops. Therefore, the total water consumption for the cannabis cultivation is 26.24 acre-feet per year (21.87 Ac x 1.2 Af/Ac). Along with the estimated water demand for the landscaping of 0.2 AFY and the projected domestic usage of 0.2 AFY, **the total project water demand stands at 26.64 AFY. Consequently, this projected demand for the main Nojoqui parcel (APN 083-430-014) is approximately 50% of the historical water consumption (51.5 AFY) over the last 10 years.**

WATERSHED FOR NOJOQUI CREEK DRAINAGE

The overall watershed area for the Nojoqui Creek drainage is shown in Figure 9. The area is quite large for a small basin comprising over 20 square miles. Comparing this drainage area to those listed in the USGS Water Supply Paper 1107 (Upson et. al.), the Nojoqui Creek drainage lies between the Jameson Lake (18 sq. mi's) and Gibraltar Dam (219 sq. mi's) areas. However, due to its location near the ridgeline of the Santa Ynez Mountains above Santa Barbara, both Jameson Lake and the area of Nojoqui Creek normally experience higher rainfall amounts. Therefore, the runoff measurements at the Jameson location are more applicable. Consequently, the runoff attributed to the Nojoqui Creek drainage area is assumed to be approximately that of Jameson Lake or an average of 6080 AF annually.

Additionally, the geologic setting for the Nojoqui Creek area is similar to both Jameson and Gibraltar in that runoff occurs over predominately older rocks and sediments of the Cretaceous Jalama Formation up through the Late Miocene Monterey Formation. This results in a greater percentage of total rainfall and runoff occupying the creek, streams and riverbeds and their associated shallow alluvial sediments rather than infiltrating into any available deeper groundwater aquifers, as is the case with the Paso Robles and Careaga Formation in central and northern Santa Barbara County. In addition, this condition of less permeable, older rocks underlying the watershed does lend itself to greater evaporation. Consequently, it is assumed that at least 30% of the total runoff for the Nojoqui Creek drainage is lost to evaporation, 40% is attributed to creek and stream surface flow that continues to the north into the Santa Ynez River Drainage Basin, and 30% is directed into water storage within alluvial sediments or aquifers lying under the Nojoqui Creek drainage area.

CONCLUSIONS

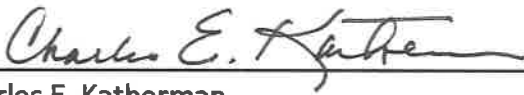

1. There is an existing water delivery system and Main Well that has been serving the Nojoqui Farm properties for over 50 years without any significant impacts to nearby Nojoqui Creek.
2. The Nojoqui Main Well was drilled and completed in December of 1964 for the sole benefit of the Nojoqui Property. The existing water system consists of separate components, one for domestic service and the other for agricultural service.

3. The Main Well is producing groundwater from Recent alluvial sediments as well as older permeable sediments of the Sacate/Gaviota Formation.
4. A pump test on the Main Well produced at a rate of 100 gpm with no detected impacts to the surface waters of Nojoqui Creek 130 feet away. There is significant evidence that confirms that there is minimal influence by the pumping of the Main Well on the surface waters of the creek, including a confining clay layer, differing water chemistries between the surface water and the subsurface water, and differing static levels. In addition, no significant changes occurred in the static levels of two additional wells that were monitored during the testing.
5. The Nojoqui Main Well does not meet the requirements for subterranean flow as determined by the State Water Resources Board in the four-part Garrapata standards; lacking impermeable beds and banks and the subsurface water is not flowing in the channel.
6. The historic water demand for the prior organic farming operations at the Nojoqui parcels (Nojoqui Property) from 2010 through 2016 was 106 AFY; the 10 year average was 82 AFY.
7. The estimated water demand for the Nojoqui Farm cannabis operation is 24.1 AFY. This represents a reduction in water consumption of 75% relative to the historical water demand of the organic farming operation.
8. The productive capacity of the Main Well (150-200 gpm) and the two secondary or backup wells (40-50 gpm) will provide a more than adequate supply of water to meet the estimated project water demand of 26.6 AFY. In fact the capacity of the Main Well alone is sufficient to meet water demand for the proposed three crop cycles per year.

It is important to note that the Nojoqui parcels are not located within the Santa Ynez River Basin (3.5 miles to the north) and are not within any State recognized groundwater basin. Therefore, there isn't a reason to apply the County's Water Thresholds. Additionally, the overall project demand is 50% lower than the recent historical averages for the Nojoqui Property. If the water demand from the years of no farming and no data then the project demand is 60% lower than the historic use.

TOPOGRAPHY MAP

AGE	FORMATION	LITHOLOGY	THICK.	DESCRIPTION	
Recent	Alluvium		0-100	Silts and gravels	
Pleistocene upper	Terraces		0-100	Gravels	
Pliocene lower	Sisquoc		3200+	Diatomaceous siltstone. Clay shale or diatomaceous mudstone.	
?				Thin-bedded clay shale or laminated diatomite.	
Miocene	upper		1000'-3000'	Porcelaneous and cherty siliceous shales.	
	middle			Organic shales and thin limestones.	
	lower	Tranquillon		0-1200'	Rhyolite and basalt lava, agglomerate tuff, bentonite.
		Rincon		0-1700'	Claystone.
	Vaqueros		0-900'	Sandstone & conglomerate.	
Oligocene	Sespe Alegria		0-2000'	Pink to buff sandstone and red and green siltstone. Gray to buff marine sandstone.	
	Gaviota		1600±	Fossiliferous buff sandstone and siltstone.	
Eocene	upper	Sacate		1000'-1500'	Buff sandstone and clay shale.
		Cozy Dell		700'-2000'	Brown clay shale.
		Matilija		0'-2000'	Buff arkosic sandstone.
	middle	Anita		0'-1000'	Dark gray clay shale.
		Sierra Blanca		0-50'	Algal limestone lens.
Cretaceous	Upper	Jalama		2200+	Buff fine-grained sandstone. Gray siltstone. Buff sandstones and gray clay shales.
	middle? and Lower	Espada		4000+ to 6800+	Dark greenish brown carbonaceous shales and thin sandstones.
	?				Basal pebbly sandstone.
Jurassic	Upper	Honda		1500'	Dark greenish brown nodular claystone.
		Franciscan		?	Hard green sandstone and black shale. Serpentine intrusions.

SOLVANG AND GAVIOTA QUADRANGLES

LEGEND

- ★ UNITS PRESENT ONLY NORTH OF SANTA YNEZ FAULT
- ◆ UNITS PRESENT ONLY SOUTH OF SANTA YNEZ FAULT

QUATERNARY

Holocene

SURFICIAL SEDIMENTS

- Qs beach sand deposits
- Qg stream channel deposits of gravel, sand and silt
- Qa valley and floodplain deposits of silt, sand and gravel
- Qls landslide debris

OLDER DISSECTED SURFICIAL SEDIMENTS

- remnants of weakly consolidated stream terrace and alluvial fan deposits of silt, sand and gravel; local unconformities at base
- Qoa undivided former terrace remnants ★ Qoa₃ lowest, youngest terrace remnants
- Qog cobble-boulder fan gravel and conglomerate deposits composed largely of sandstone detritus ★ Qoa₂ intermediate terrace remnants
- ★ Qoa₁ highest, oldest terrace remnants

UNCONFORMITY

★ PASO ROBLES FORMATION

- nonmarine; latest Pliocene to early Pleistocene age
- QTp weakly consolidated, light greenish-gray to reddish alluvial conglomerate, sand, and clay; conglomerate composed largely of Monterey Shale detritus

★ CAREAGA SANDSTONE

- shallow marine regressive; late Pliocene age
- Tca friable, massive, grayish-yellow, locally pebbly sandstone

UNCONFORMITY

SISQUOC SHALE

- marine; late Miocene age
- Tsq north of Santa Ynez fault: soft white impure diatomite and diatomaceous shale; south of Santa Ynez fault: exposed offshore only, southwest of Gaviota Beach area; Deimonian-Mohnian Stage

MONTEREY SHALE

- marine; early to late Miocene age
- Tmcg conglomerate-breccia of siliceous and cherty shale detritus in tar-soaked sandstone matrix, west of Gaviota Beach
- Tm upper shale unit: white-weathering, thin-bedded, hard, brittle siliceous shale, locally cherty; Mohnian Stage
- Tml lower shale unit: white-weathering, soft, punky, fissile to platy, semi-siliceous shale, containing thin, gray-white calcareous strata; Lucian-Rolizian Stage

★ TRANQUILLON VOLCANIC FORMATION

- marine(?); early Miocene age
- Tib west of Buellton: brown-weathering black basaltic flow(?) breccia
- Ttc south of Solvang: weathered, hard brown tuff breccia and bentonitic sandstone in part calcareous, and gray-white algal limestone; uppermost Saucian Stage

Miocene

**FIGURE 6B

TERTIARY

Oligocene

UNCONFORMITY

RINCON SHALE

marine; early Miocene age

Tr poorly bedded gray clay shale or claystone; Saucian and upper Zemorrian Stages

VAQUEROS SANDSTONE

shallow marine transgressive; early Miocene age

Tvq north of Santa Ynez fault: greenish-tan sandstone and interbedded greenish siltstone, with local calcareous lenses; south of Santa Ynez fault: light gray calcareous sandstone

*Tvqcg greenish-brown sandstone and pebble conglomerate composed mostly of Franciscan detritus

SESPÉ FORMATION

nonmarine; predominantly Oligocene age

Tsp gray to tan sandstone and green to red siltstone and claystone; basal part intertongues westward with Alegria Formation south of Santa Ynez fault

* Tspcg greenish-gray to reddish conglomerate composed mostly of Franciscan and ultramafic (peridotite) detritus; unconformity at base

◆ **ALEGRIA FORMATION**

shallow marine regressive; Oligocene age

Ta tan, arkosic sandstone and greenish-gray siltstone, locally fossiliferous; intertongues eastward into lowest part of Sespe Formation; lower Zemorrian and Refugian Stage

◆ **GAVIOTA FORMATION**

shallow marine regressive; early Oligocene age

Tgss hard, thick bedded tan arkosic sandstone, locally fossiliferous, and minor gray siltstone; Refugian Stage

Tgsl gray concretionary siltstone and claystone

◆ **GAVIOTA — SACATE FORMATIONS**

Tg-sa Gaviota or Sacate Formations, undifferentiated

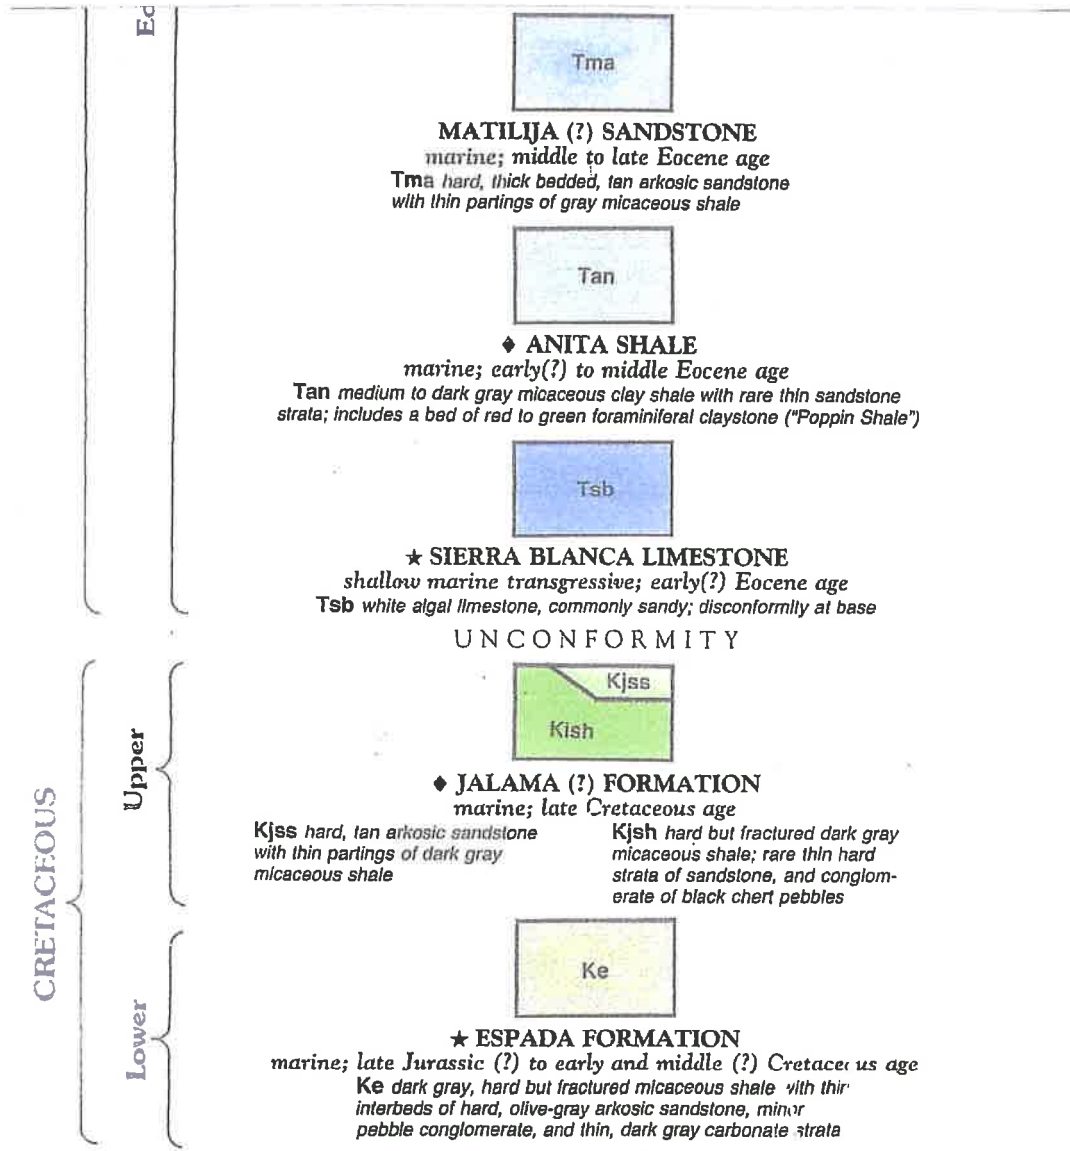

◆ **SACATE FORMATION**

marine; late Eocene age

dark gray micaceous clay shale and siltstone interbedded with hard, light gray to tan arkosic sandstone; Narizian Stage

Tsass predominantly sandstone Tsash predominantly shale

FOR A VALUABLE CONSIDERATION, receipt of which is hereby acknowledged

STEVEN K. FLANAGAN and ALISON K. FLANAGAN, his wife

have granted to

STANLEY WILSON OSBERT and ROSEMARY OSBERT, his wife, as joint tenants

A PART of the Rancho project, in the County of Santa Barbara, State of California, as granted by the United States of America to Raymond Donnell, by Patent dated September 12, 1859, and recorded in Book "A" at Page 779, of said County, in the office of the County Recorder of said County, and particularly described as follows:

Beginning at a point in Line No. 9 of the final survey of said Rancho Mojado, at the corner corner to Section 31, Township 6 North, Range 21 West, S. B. & N., and Section 30, Township 6 North, Range 22 West, S. B. & N., from which point of beginning the corner corner to Section 24, Township 6 North, Range 21 West, S. B. & N., and Section 25, Township 6 North, Range 22 West, S. B. & N., in the Township line between Township 6 North and Township 5 North 2200 feet South 731.50 feet distant, and from which last described point the corner corner to Sections 2 and 3, Township 5 North, Range 22 West, S. B. & N., bears East 398.70 feet distant; thence from said point of beginning, East 75.50 feet along said Line No. 9 of the final survey of said Rancho Mojado and also; the South line of said Section 21, Township 6 North, Range 21 West, S. B. & N., to a point in the westerly line of a certain county road, thence along said road, East 1'30" West 1112.04 feet to a point in the center line of a ditch near the West side of a bridge; thence East, East 11.22 feet to a point in the center line of said county road; thence along said road, North 37' North 37' East 150 feet to a point at an angle in the center line of said county road, thence along said road, North 35'03" West 105.70 feet to a point of another angle in said county road; thence East, North 35' West 400 feet to a point; thence leaving the center line of said County road, East 27'23" West at 156.50 feet, a point in the center line of a deep gulch at the West southerly corner of that certain parcel of land as particularly described in the Deed to Edmund de la Cruz et al et al, dated March 12, 1904 and recorded in Book 126 at Page 78, at sec., of Deeds, in the office of the County Recorder of said County, 169.40 feet to a point; thence along the westerly line of said parcel of land, as described in said Deed to Edmund de la Cruz et al et al, corners by the following 15 courses and distances: East 37'00" West 187.20 feet to a point; thence North 9th, North 3'25" East 75.70 feet to a point; thence North 10th, North 46'10" East 51.20 feet to a point; thence East, North 12'10" West 75.30 feet to a point; thence East, North 5' West 55 feet to a point; thence North 13th, North 10'70" West 51.60 feet to a point; thence North, North 15'17" East 107 feet to a point; thence North 13th, North 15'21" East 64.60 feet to a point; thence North 15th, North 23'53" East 50.00 feet to a point; thence North 17th, North 61'47" East 69 feet to a point; thence North 18th, North 6'10" East 91.20 feet to a point; thence North 19'45" East 73.20 feet to a point; thence North 20th, North 20'09" East 77 feet to a point; thence North 21st, North 15' East 157.00 feet to a point; thence North 22nd, North 42'30" East 12.50 feet to the confluence of said deep gulch and that certain creek locally known as and called Mojado Creek, from said point of confluence the willow trees marked "P.M.T." below North 68'05" East 12.40 feet distant, and North 48'30" East 22.50 feet distant, respectively; thence up the center line of said Mojado Creek, following its meanders by the following 18 courses and distances: East, East 12 feet to a point; thence North 25th, North 40" East 32 feet to a point; thence North 26th, South 10' West 111 feet to a point; thence North 27th, South 29' West 157.20 feet to a point; thence North 28th, South 44" East 140.50 feet to a point; thence North 29th, North 63'30" East 137.28 feet to a point; thence North 30th, South 8' East 130 feet to a point; thence North 31st, South 6'30" East 155 feet to a point; thence North 32nd, South 13" West 264.00 feet to a point; thence North 33rd, South 41" East 111.50 feet to a point; thence North 34th, South 67'30" East 135.50 feet to a point; thence North 35th, South 12" East 104 feet to a point; thence North 36th, South 5" East 264 feet to a point; thence North 37th, South 46" East 144.50 feet to a point; thence North 38th, South 14" East 190 feet to a point; thence North 39th, South 15" East 99 feet to a point; thence North 40th, South 73'45" East 157.74 feet to a point; thence North 41st, South 12" East 181.42 feet to a point; thence North 42nd, South 65" East 60 feet to a point; thence North 43rd, South 8'22" West 165 feet to a point; thence North 44th, South

RECORDED

RECORDED AT THE OFFICE OF THE COUNTY RECORDER
SAN BERNARDINO COUNTY, CALIF.

to a point; thence 46th, South 23° West 108.90 feet to a point, thence 47th, South 23° East 33 feet to a point in said line No. 9 of the final survey of said Rancho Mojqui; thence along same, 48th, East 962.28 feet to the point of beginning;

EXCEPTING therefrom so much thereof as has been conveyed to the State of California for highway purposes, including the portion surveyed by the Deed dated April 8, 1924, and recorded May 24, 1935 as Instrument No. 9257, in Book 1316 at Page 286 of Official Records.

ALSO EXCEPTING therefrom 1/2 of all oil, gas or other hydrocarbon substances in, under or upon said land, as reserved in the Deed from Sylvia C. McMartin, also known as Cecelia McMartin and Sylvia McMartin, Veronica Clinton, Josephellen Masse, Cecelia Houchleau and Mary Lois Houchleau, recorded May 2, 1951, as Instrument No. 7747, in Book 991 at Page 288 of Official Records.

Excepting and reserving unto the grantors herein, for the period of their lives plus twenty-one years, an undivided one-half interest in and to all oil, gas, petroleum and other hydrocarbon substances, minerals and water in, under or recoverable from the portion of subsurface of the above described land lying below a plane parallel to and 500 feet vertically below the surface of said land, without, however, the right to enter upon the surface of said land or any portion thereof lying above a plane parallel to and 500 feet vertically below the surface of said land.

Also Excepting therefrom that portion thereof described as follows:

Beginning at Southwest corner of Parcel One above described parcel, being a point on line No. 9 of said Rancho Mojqui; thence, along the west line of said parcel the following courses and distances: North 30° West, 33 feet; thence North 23° East, 108.90 feet; thence North 10° West 72.60 feet; thence North 54°30' West, 105 feet, thence North 8°30' East 165 feet; thence leaving said westerly line South 85° 45' 31" East, 521.49 feet to a point from which said line No. 9 of Rancho Mojqui bears South 6° 14' 53" West, 463.13 feet; thence South 6°14'53" West, 463.13 feet to a point on said Line No. 9 from which the point of beginning bears West, 431.01 feet; thence along said Line No 9 West 431.01 feet to the point of beginning.

PARCEL TWO

An easement and right of way for water well sight purposes, pumping plant and incidentals thereto over, under, upon, and through the following described land: Beginning at the Southwest corner of Parcel one above described; thence along the westerly line of said Parcel one North 16° West 33 feet; thence continuing along said westerly line North 23° East, 28.53 feet; thence leaving said westerly line North 85°34'45" East, 130.40 feet; thence South 3°01'45" West 65.50 feet to a point on said Line No. 9 from which the point of beginning bears West 99 feet; thence along said Line No. 9 West 99 feet to the point of beginning.

EXCEPTING AND RESERVING from PARCEL ONE above an easement for road, public utilities purposes, ingress and egress over, under, along and upon a strip of land 30 feet in width lying adjacent to and northerly of the westerly of said Parcel One, excepting that portion thereof lying within the lines of PARCEL TWO herein.

PARCEL THREE:
An easement for water line purposes, repairs and maintenance the same, over, under, upon and along a 10 foot strip of land described as follows commencing at the southwest corner of Parcel One herein described thence North 6°14'53" East 21.45 feet to the beginning of the center line of said 10 foot easement; thence south 89°37'36" west 55.72 feet; thence north 61°08' west 55.00 feet; thence south 35°07' west 40.50 feet; thence south 85°55' West 67.00 feet; thence North 50°47' West 83.55 feet to appoint on the east line of Parcel two here and above described said point being South 3°01'45" west 8.00 feet from the northwest corner of said Parcel two.

In Book 68 at Page 90 of Record of Surveys, appears a map of the herein described land.

FOR NO CONSIDERATION,

NEW FRONTIERS HOLDINGS, INC., a California Corporation, of 1984 Old Mission Drive A7, Solvang, CA 93463, Grantor, a corporation organized under the laws of the state of California, hereby GRANT(s) to

SUNBURST CHURCH OF SELF REALIZATION, a California nonprofit religious corporation, of 7200 Highway 1, Lompoc, CA 93436, Grantee, certain real property located in the County of Santa Barbara, State of California, as described on Exhibit A, attached hereto and incorporated herein by this reference.

IN WITNESS WHEREOF, Grantor has caused this instrument to be executed as of the 19th day of April, 2017.

NEW FRONTIERS HOLDINGS, INC.,
a California corporation.

By: *Jonathan King*
Name (Print): Jonathan King
Its: President

EXHIBIT A

(Legal Description)

The land situated in the State of California, County of Santa Barbara, City of Buellton and is described as follows:

PARCEL ONE:

A part of the Rancho Nojoqui, in the County of Santa Barbara, State of California, as granted by the United States of America to Raymundo Carrillo, by patent dated September 11, 1869, and recorded in Book "A" at Page 779, et seq., of Patents, in the office of the County Recorder of said County, and particularly described as follows:

Beginning at a point in Line No. 9 of the Final Survey of said Rancho Nojoqui, at the corner common to Section 31, Township 6 North, Range 31 West, S. B. & M., and Section 36, Township 6 North, Range 32 West, S. B. & M., from which point of beginning the corner common to Section 31, Township 6 North, Range 31 West, S. B. & M., and Section 36, Township 6 North, Range 32 West, S. B. & M., in the township line between Township 6 North and Township 5 North bears South 701.58 feet distant, and from which last described point the corner common to Sections 1 and 2, Township 5 North, Range 32 West, S. B. & M., bears East 392.70 feet distant; thence from said point of beginning, 1st, East 76.58 feet along said Line No. 9 of the Final Survey of said Rancho Nojoqui and along the South line of said Section 31, Township 6 North, Range 31 West, S. B. & M., to a point in the Westerly line of a certain county road; thence along same, 2nd, North 1°30' West 1118.04 feet to a point in the center line of a gulch near the West side of a bridge; thence 3rd, East 11.22 feet to a point in the center line of said county road; thence along same, 4th, North 17° West 59 feet to a point at an angle in the center line of said county road; thence 5th, North 35°03' West 195.50 feet to a point at another angle in said county road; thence 6th, North 14°35' West 408 feet to a point; thence leaving the center line of said county road, 7th, North 67°15' West at 156.50 feet, a point in the center line of a deep gulch at the most Southerly corner of that certain parcel of land as particularly described in the deed to Eduardo De La Cuesta to E. S. Cordero, dated March 10, 1904 and recorded in Book 100 at Page 72, et seq., of Deeds, in the office of the County Recorder of said County, 169.50 feet to a point; thence along the Westerly line of said parcel of land, as described in said deed to Eduardo De La Cuesta to E. S. Cordero, by the following 16 courses and distances: 8th, North 37°20' West 147.30 feet to a point; thence 9th, North 3°15' East 78.70 feet to a point; thence 10th, North 48°30' West 51.20 feet to a point; thence 11th, North 12°10' West 76.30 feet to a point; thence 12th, North 54° West 55 feet to a point; thence 13th, North 19°30' West 51.40 feet to a point; thence 14th, North 25°17' West 109 feet to a point; thence 15th, North 13°51' East 84.80 feet to a point; thence 16th, North 33°55' East 56.60 feet to a point; thence 17th, North 61°47' East 69 feet to a point; thence 18th, North 6°10' West 91.80 feet to a point; thence 19th, North 13°45' East 73.20 feet to a point; thence 20th, North 20°25' East 77 feet to a point; thence 21st, North 15° West 153.80 feet to a point; thence 22nd, North 18°30' West 136.50 feet to a point; thence 23rd, North 42°30' East 32.50 feet to the confluence of said deep gulch and that certain creek locally known as and called Nojoqui Creek, from said point of confluence, two willow trees marked "F. B. T." bears North 62°45' West 12.50

feet distant, and North 42°30' East 32.50 feet distant, respectively; thence up the center line of said Nojoqui Creek, following its meanders by the following 23 courses and distances: 24th, West 33 feet to a point; thence 25th, South 40° West 330 feet to a point; thence 26th, South 10° West 132 feet to a point; thence 27th, South 29° West 165 feet to a point; thence 28th, South 44° West 140.58 feet to a point; thence 29th, North 68°30' West 137.28 feet to a point; thence 30th, South 8° East 132 feet to a point; thence 31st, South 8°30' West 165 feet to a point; thence 32nd, South 15° West 264.00 feet to a point; thence 33rd, South 41° West 111.54 feet to a point; thence 34th, South 67°30' West 135.96 feet to a point; thence 35th, South 12° West 264 feet to a point; thence 36th, South 5° West. 264 feet to a point; thence 37th, South 49° West 144.54 feet to a point; thence 38th, South 14° East 198 feet to a point; thence 39th, South 43° East 99 feet to a point; thence 40th, South 73°45' East 157.74 feet to a point; thence 41st, South 22° East 321.42 feet to a point; thence 42nd, South 65° East 66 feet to a point; thence 43rd, South 8°30' West 165 feet to a point; thence 44th, South 54° 30' East 165 feet to a point; thence 45th, South 10° East 72.60 feet to a point; thence 46th, South 23° West 108.90 feet to a point; thence 47th, South 15° East 33 feet to a point in said Course No. 9 of the Final Survey of said Rancho Nojoqui; thence along same, 48th, East 962.28 feet to the point of beginning.

EXCEPTING therefrom that portion thereof as has been conveyed to the State of California, for highway purposes, including the portion conveyed by the deed dated April 4, 1955 and recorded May 24, 1955, as instrument No. 9257 in Book 1316, at Page 226 of Official Records.

ALSO EXCEPTING therefrom that portion thereof described as follows:

Beginning at Southwest corner of Parcel One above described parcel, being a point on Line No. 9 of said Rancho Nojoqui; thence, along the West line of said parcel, the following courses and distances: North 16° West, 33 feet; thence North 23° East, 108.90 feet; thence North 10° West. 72.60 feet; thence North 54°30' West, 165 feet; thence North 8°30' East 165 feet; thence leaving said Westerly line South 89°45'31" East, 521.49 feet to a point from which said Line No. 9 of Rancho Nojoqui bears South 0°14'53" West, 463.13 feet; thence South 0°14'53" West, 463.13 feet to a point on said Line No. 9 from which the point of beginning bears West, 431.01 feet; thence along said Line No. 9 West 431.01 feet to the point of beginning.

ALSO EXCEPTING therefrom 1/2 of all oil, gas or other hydrocarbon substances in, under or upon said land, as reserved in the deed from Sylvia C. McMartin, also known as Cecelia McMartin and Sylvia McMartin, Veronica Clinton, Josephellen Hanse, Cecilia Rouchleau and Mary Lois Rouchleau, recorded May 18, 1951 as Instrument No. 7747 in Book 991 at Page 284 of Official Records.

ALSO EXCEPTING therefrom for the period of their lives plus twenty-one years, an undivided one-half interest in and to all oil, gas, petroleum and other hydrocarbon substances, minerals and water in, under or recoverable from the portion of subsurface of the above described land lying below a plane parallel to and 500 feet vertically below the surface of said land, without, however, the right to enter upon the surface of said land or any portion thereof, lying above a plane parallel to and 500 feet vertically below the surface of said land, as reserved by Peter M. Flanagan, et ux. ,in the deed recorded December 31, 1964 as Instrument No. 54827 in Book 2085, Page 942 of Official Records.

PARCEL TWO:

An easement and right of way for water well site purposes, pumping plant and incidentals thereto over, under, upon, and through the following described land: Beginning at the Southerly terminus of the 47th course of Parcel One hereinabove described; thence Northerly along said 47th course North 15° West 33 feet; thence continuing North 23° East 28.83 feet; thence North $85^{\circ}34'45''$ East, 100.40 feet; thence South $3^{\circ}01'45''$ West 66.50 feet to a point on said Course No. 9 from which the point of beginning bears West 99 feet; thence along said Course No. 9 West 99 feet to the point of beginning.

PARCEL THREE:

An easement for water line purposes, repairs and maintenance of the same, over, under, upon and along a 10 foot strip of land described as follows: Commencing at the Southerly terminus of the 47th course of Parcel One hereinabove described; thence North $0^{\circ}14'53''$ East 21.45 feet to the beginning of the center line of said 10 foot easement; thence South $89^{\circ}37'36''$ West 95.72 feet; thence North $61^{\circ}08'$ West 55.00 feet; thence South $35^{\circ}07'$ West 40.50 feet; thence South $86^{\circ}55'$ West 97.00 feet; thence North $50^{\circ}47'$ West 83.55 feet to a point on the East line of Parcel Two here and above described, said point being South $3^{\circ}01'45''$ West 6.00 feet from the Northeast corner of said Parcel Two.

APN: 083-430-014

ACKNOWLEDGMENT

A notary public or other officer completing this certificate verifies only the identity of the individual who signed the document to which this certificate is attached, and not the truthfulness, accuracy, or validity of that document.

State of California
County of Santa Barbara

On April 19, 2017 before me, Lori A. Thompson, Notary Public
(insert name and title of the officer)

personally appeared Jonathan Mark King
who proved to me on the basis of satisfactory evidence to be the person(s) whose name(s) is are subscribed to the within instrument and acknowledged to me that he she/they executed the same in his her/their authorized capacity(ies), and that by his her/their signature(s) on the instrument the person(s), or the entity upon behalf of which the person(s) acted, executed the instrument.

I certify under PENALTY OF PERJURY under the laws of the State of California that the foregoing paragraph is true and correct.

WITNESS my hand and official seal.

Signature Lori A. Thompson (Seal)

WATER WELL DRILLERS REPORT

(Sections 7076, 7077, 7078, Water Code)

Do Not Fill In

No. 40500

STATE OF CALIFORNIA

State Well No. _____

Other Well No. _____

(1) OWNER:

Name **A. D. Gabert**

Address **Box 28
Calabasas, Calif.**

(2) LOCATION OF WELL:

County **Santa Barbara** Owner's number, if any—

R. P. D. or Street No. **Approximately 4 miles south of
Muelton on Highway 101, 1/2 mile north and
1/2 mile west of intersection of Highway 101.**

(3) TYPE OF WORK (check):

New well Deepening Reconditioning Abandon

If abandonment, describe material and procedure in Item 11.

(4) PROPOSED USE (check):

Domestic Industrial Municipal
Irrigation Test Well Other

(5) EQUIPMENT:

Rotary
Cable
Dug Well

(6) CASING INSTALLED:

SINGLE DOUBLE

From **0** ft. to **35** ft. Diam. **8** Gage or Wall

If gravel packed

Diameter of Bore from ft. to ft.

Type and size of shoe or well ring

Describe joint **well collar**

Size of gravel:

(7) PERFORATIONS:

Type of perforator used **Miller knife**

Size of perforations **1/2** in., length, by **2** in.

From **44** ft. to **48** ft. Perf. per row **2** Rows per ft.

(8) CONSTRUCTION:

Was a surface sanitary seal provided? Yes No To what depth **22** ft.

Were any strata sealed against pollution? Yes No If yes, note depth of strata

From _____ ft. to _____ ft.

Method of Sealing

(9) WATER LEVELS:

Depth at which water was first found _____ ft.

Standing level before perforating _____ ft.

Standing level after perforating **30** ft.

(10) WELL TESTS:

Was a pump test made? Yes No If yes, by whom?

Yield: _____ gal./min. with _____ ft. draw down after _____ hrs.

Temperature of water _____ Was a chemical analysis made? Yes No

Was electric log made of well? Yes No

(11) WELL LOG:

Total depth **76** ft. Depth of completed well _____

Formation: Describe by color, character, size of material, and structure.

ft. to	ft.	Formation
0	2	Black soil
2	26	Yellow clay
26	37	Sandy blue clay
37	39	Sandy blue clay and gravel
39	45	Sandy blue clay
45	49	Gravel, some blue clay
49	76	Blue sand, some gravel

Work started _____ 19 _____ Completed **December** 19 **64**

WELL DRILLER'S STATEMENT:

This well was drilled under my jurisdiction and this report is true to the best of my knowledge and belief.

NAME **Alexander Bros.**

(Person, firm, or corporation) (Typed or printed)

Address **415 East College Ave.**

Lompoc, Calif.

[SIGNED] **Robert W. Alexander** Well Driller

License No. **206471** Dated **12/2/64**

MOONSHINE WELLS 1 & 2
WELL COMPLETION REPORTS

MOONSHINE 1

STATE OF CALIFORNIA
THE RESOURCES AGENCY

DEPARTMENT OF WATER RESOURCES
WATER WELL DRILLERS REPORT

Do not fill in

QUADRUPPLICATE
Use to comply with
local requirements

No. 354299

Notice of Intent No. _____
Local Permit No. or Date _____

State Well No. _____
Other Well No. _____

(1) OWNER: Name MOONSHINE VALLEY RANCH
Address P.O. Box 1376
City LAUREL, CA ZIP 94527

(12) WELL LOG: Total depth 180 ft. Completed depth 180 ft.
from ft. to ft. Formation (Describe by color, character, size or material)

0 - 45 Gravel
45 - 80 Gravel with coarse
80 - 180 gray shale

(2) LOCATION OF WELL (See instructions):
County SAN FRANCISCO Owner's Well Number _____
Well address if different from above 1101 10th
Township 5N Range 32W Section _____
Distance from cities, roads, railroads, fences, etc. _____

WELL LOCATION SKETCH

(3) TYPE OF WORK:
New Well Deepening
Reconstruction
Reconditioning
Horizontal Well
Destruction (Describe destruction materials and procedures in Item 12)

(4) PROPOSED USE:
Domestic
Irrigation
Industrial
Test Well
Municipal
Other (Describe)

(5) EQUIPMENT:
Rotary Reverse
Cable Air
Other Bucket

(6) GRAVEL PACK:
Yes No Size 1/4"
Diameter of bore _____
Packed from _____ to _____

(7) CASING INSTALLED:
Steel Plastic Concrete

(8) PERFORATIONS:
Types of perforation or size of screen

From ft.	To ft.	Dia. in.	Cage or Wall	From ft.	To ft.	Slot size
0	60	2 1/2"	3 1/2"	60	180	.040

(9) WELL SEAL:
Was surface sanitary seal provided? Yes No If yes, to depth 60 ft.
Were strata sealed against pollution? Yes No Interval _____ ft.
Method of sealing _____

Work started 11-1-95 Completed 11-15-95

(10) WATER LEVELS:
Depth of first water, if known _____ ft.
Standing level after well completion 25 ft.

WELL DRILLER'S STATEMENT:
This well was drilled under my jurisdiction and this report is true to the best of my knowledge and belief.

(11) WELL TESTS:
Was well test made? Yes No If yes, by whom? Cascade
Type of test Pump Bailor Air lift
Depth to water at start of test 25 ft. At end of test 152 ft.
Discharge 55 gal/min after 12 hours Water temperature _____
Chemical analysis made? Yes No If yes, by whom? _____
Was electric log made? Yes No If yes, attach copy to this report

LEGAL DECLARATION

LICENSED CONTRACTOR DECLARATION

I hereby affirm that I am a licensed under the provisions of Chapter 9 (commencing with Sec. 7000) of Division 3 of the Business and Professions Code and such license (C-57 or C-61) is in full force and effect.

NOT APPLICABLE (AS BUILT)

Print Name of Contractor

Signature of Contractor

Date

Lic. No.: Office Telephone Cell Phone:

Business Name: Address

10. (Complete 'A' or 'B')

A. WORKERS' COMPENSATION DECLARATION

I hereby affirm one of the following:

- I have and will maintain a certificate of consent to self-insure for workers' compensation... I have and will maintain workers' compensation insurance...

Carrier Policy No.

Applicant Signature Date

B. CERTIFICATION OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

I certify that in the performance of work for which this permit is issued, I shall not employ any person in a manner so as to become subject to the Worker's Compensation Laws of California.

Applicant Signature Date 4/26/2021

Notice to Applicant: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

11. When signed by the Environmental Health Specialist, this application shall become a Permit to Construct a Single Parcel Water System and is not a "permit for development" as that term is used in the California Subdivision Map Act.

In accordance with the requirements of Santa Barbara County Code, I do hereby make application for a permit to construct a Single Parcel Water System and certify that the above information is true and correct.

REQUIRED INSPECTIONS / FINAL CLEARANCE: Prior to final clearance/occupancy:

- 1. Disinfect and flush the completed water system per EHS instructions. 2. After flushing, a final inspection and bacteriological sampling must be scheduled directly with the approving Environmental Health Specialist at least two (2) business days in advance. 3. Submit a chemical analysis of treated water (if treatment is required). 4. Obtain written occupancy from Environmental Health.
