Sep 6, 2016

Supervisor - Santa Barbara Board of Supervisors - District 1 Salud Carbajal
105 East Anapamu Street
Santa Barbara, CA 93101-2000

Dear Supervisor - Santa Barbara Board of Supervisors - District 1 Carbajal,

On June 29, your Planning Commission voted 3-2 to deny Pacific Coast Energy Company's application to drill almost 100 additional steam fracking (cyclic steam injection) wells, due to numerous unavoidable environmental impacts that would result from the proposal.

I urge you to uphold their decision to deny the project, now that it has been appealed to the Board.

Please continue to move Santa Barbara County in the direction of a 100% renewable energy future by denying Pacific Coast Energy Company's (PCEC's) new steam fracking project.

We need reliable, safe jobs in the renewable energy sector; not hazardous, tenuous employment that can disappear with a decline in global oil prices or with a ruptured pipeline.

Santa Barbara and the Tri-Counties have made an excellent first step in leading our region into the first phase of a 100% renewable Community Choice Energy program. It would be incongruous to also approve the

expansion of one of the dirtiest, most carbon intensive oil projects.
Santa Barbara, our Santa Barbara, Must look towards the Future! Let us
be leaders and lead the charge to the fossil-free economy.

Protect Santa Barbara County from the unavoidable boom and bust cycles
associated with an oil-based economy. Help us cultivate our beautiful
region and stop the destructive and outdated thinking of the past!

On behalf of the climate, our economy and our health, I urge you to
deny the Pacific Coast Energy Company's proposal, in favor of a swift
transition to a clean and prosperous energy future.

Sincerely,

Mrs. Jessica Parfrey

Dear Supervisor - Santa Barbara Board of Supervisors - District 1 Carbajal,

On June 29, your Planning Commission voted 3-2 to deny Pacific Coast Energy Company's application to drill almost 100 additional steam fracking (cyclic steam injection) wells, due to numerous unavoidable environmental impacts that would result from the proposal.

I urge you to uphold their decision to deny the project, now that it has been appealed to the Board.

Please continue to move Santa Barbara County in the direction of a 100% renewable energy future by denying Pacific Coast Energy Company's (PCEC's) new steam fracking project.

We need reliable, safe jobs in the renewable energy sector; not hazardous, tenuous employment that can disappear with a decline in global oil prices or with a ruptured pipeline.

Santa Barbara and the Tri-Counties have made an excellent first step in leading our region into the first phase of a 100% renewable Community Choice Energy program. It would be incongruous to also approve the

expansion of one of the dirtiest, most carbon intensive oil projects.

Protect Santa Barbara County from the unavoidable boom and bust cycles associated with an oil-based economy. Help us benefit from the growing renewable energy economy by transitioning us away from oil development.

On behalf of the climate, our economy and our health, I urge you to deny the Pacific Coast Energy Company's proposal, in favor of a swift transition to a clean and prosperous energy future.

Sincerely,

Mr. Doyle Barnett

Chair Adam and Members of the Board,

It is anticipated that members of the Board could receive quite a bit of correspondence related to the PCEC hearing scheduled for October 11, 2016 in Santa Maria. Please forward all ex-parte communications to the Clerk of the Board at sbcob@co.santa-barbara.ca.us per the procedures outlined below. We will post the material as appropriate prior to the hearing. Let me know if you have any questions.

Mike Allen
568-2245

Regarding uniform procedures for the distribution of ex parte disclosures prior to quasi-judicial hearings:

The Clerk of the Board will post online all ex parte communications determined appropriate by the individual Board offices. Board offices should identify emailed or written ex parte communications and email them to sbcob@co.santa-barbara.ca.us. Please scan any hard copy material and send it via email. Hard copies of ex parte documents should not be submitted to the Clerk of the Board.

To ensure proper filing please reference "ex parte" and the date of the hearing in the subject line as well as the subject matter. (Example: "Ex Parte 1/20/17 – Miramar Beach Appeal").

All ex parte communication received will be published as an attachment with the corresponding item on the County webpage. Thank you in advance for your cooperation and understanding. Please direct all questions or concerns to the Clerk of the Board.

Subject: **upcoming action on oil fields**

1. The Planning Commission carefully considered this project and rejected it because of the significant, unmitigated Class I impacts to Air Quality, Endangered and Sensitive Species, Critical Habitat and Water Quality. County Staff also recommends rejecting the appeal and only approving the emergency seep cans that are necessary to address the on-going seep problem from existing operations.
2. Cyclic Steam Injection method has a high well casing failure rate and there is a history of eruptive well failures at the site. The drilling would occur in an area that is already suffering extensive damage from 100 accidental oil seeps to date. The State predicts at least another 225 seeps in the next 25 years if the Project is approved.
3. The Project site is one of the most biologically rich locations in Santa Barbara County. The Project's oil seeps would potentially drown the endangered California Tiger Salamanders and destroy some of the rarest and most imperiled plant communities in the world, such as the Southern Bishop Pine forest and the Burton Mesa Chaparral. It will also have an irreversible impact on endangered Lompoc Yerba Santa plants, found in only 6 locations in the world.
4. The environmental review found significant and unavoidable risks to our water. The Project site is on a hill that intersects Orcutt creek and others that flow to the San Antonio Lagoon and Pacific Ocean. The recent Refugio oil spill demonstrates the immense risk and costs of oil spills.
5. The County cannot justify overturning the Planning Commission 's decision and Staff recommendation of denial. The Project does not supply any benefits that will outweigh the potentially substantial and irreversible environmental harm from allowing PCEC to double its cyclic steam drilling operations on Orcutt Hill. Thus, the County cannot legally justify approving the Project with a Statement of Overriding Considerations.

Please help stop this!

Thank you,
Cherie Baroni

Dear Salud,

On October 11, the SB County Supervisors will make a final decision on PCEC's appeal to drill up to 144 cyclic steam injection oil wells in the Orcutt Hills. This oil project was rejected by the Planning Commission due to unavoidable risk of spills. Existing operations there have already caused 100 seeps into surrounding natural areas, wetlands, oak woodlands and endangered species habitats

As private citizen I urge you to vote to deny the appeal for the following reasons:

The Planning Commission carefully considered this project and rejected it because of the significant, unmitigated Class I impacts to Air Quality, Endangered and Sensitive Species, Critical Habitat and Water Quality. County Staff also recommends rejecting the appeal and only approving the emergency seep cans that are necessary to address the on-going seep problem from existing operations.

Cyclic Steam Injection method has a high well casing failure rate and there is a history of eruptive well failures at the site. The drilling would occur in an area that is already suffering extensive damage from 100 accidental oil seeps to date. The State predicts at least another 225 seeps in the next 25 years if the Project is approved.

The Project site is one of the most biologically rich locations in Santa Barbara County. The Project's oil seeps would potentially drown the endangered California Tiger Salamanders and destroy some of the rarest and most imperiled plant communities in the world, such as the Southern Bishop Pine forest and the Burton Mesa Chaparral. It will also have an irreversible impact on endangered Lompoc Yerba Santa plants, found in only 6 locations in the world.

The environmental review found significant and unavoidable risks to our water. The Project site is on a hill that intersects Orcutt creek and others that flow to the San Antonio Lagoon and Pacific Ocean. The recent Refugio oil spill demonstrates the immense risk and costs of oil spills.

Thank you for your attention to this matter.

Subject: Deny application for this project

1. The Planning Commission carefully considered this project and rejected it because of the significant, unmitigated Class I impacts to Air Quality, Endangered and Sensitive Species, Critical Habitat and Water Quality. County Staff also recommends rejecting the appeal and only approving the emergency seep cans that are necessary to address the on-going seep problem from existing operations.
2. Cyclic Steam Injection method has a high well casing failure rate and there is a history of eruptive well failures at the site. The drilling would occur in an area that is already suffering extensive damage from 100 accidental oil seeps to date. The State predicts at least another 225 seeps in the next 25 years if the Project is approved.
3. The Project site is one of the most biologically rich locations in Santa Barbara County. The Project's oil seeps would potentially drown the endangered California Tiger Salamanders and destroy some of the rarest and most imperiled plant communities in the world, such as the Southern Bishop Pine forest and the Burton Mesa Chaparral. It will also have an irreversible impact on endangered Lompoc Yerba Santa plants, found in only 6 locations in the world.
4. The environmental review found significant and unavoidable risks to our water. The Project site is on a hill that intersects Orcutt creek and others that flow to the San Antonio Lagoon and Pacific Ocean. The recent Refugio oil spill demonstrates the immense risk and costs of oil spills.
5. The County cannot justify overturning the Planning Commission's decision and Staff recommendation of denial. The Project does not supply any benefits that will outweigh the potentially substantial and irreversible environmental harm from allowing PCEC to

double its cyclic steam drilling operations on Orcutt Hill. Thus, the County cannot legally justify approving the Project with a Statement of Overriding Considerations.

Thank you for taking action to prevent more oil seeps and spills in Santa Barbara County!

RE: Case No. APL-00000-00020

Dear Supervisors:

I am writing in reference to the Pacific Coast Energy project that will be considered by the Board later this fall. I represent the members of the Tri-County Building and Construction Trades Council-many of who live and work in Santa Barbara County.

We are committed to supporting projects that will move our region forward and create good jobs. We are proud to support the Pacific Coast Energy Project, as it will do both.

Oil extraction is important to our entire coastal region as well as the State of California. Extraction creates hundreds of thousands of jobs and billions of dollars in revenue for essential services in our area and around the State.

I understand that the Planning Commission voted to deny this project. Based on the concerns of the Planning Commission, this project has been significantly amended to take into account the concerns that were voiced in that process.

On behalf of my membership, I urge the Santa Barbara County Board of Supervisors to reject the recommendation of the Planning Commission and support this important project as amended.

Very truly yours,

Tony Skinner

Supervisor - Santa Barbara Board of Supervisors - District 1 Salud
Carbajal
105 East Anapamu Street
Santa Barbara, CA 93101-2000

Dear Supervisor - Santa Barbara Board of Supervisors - District 1
Carbajal,

On June 29, your Planning Commission voted 3-2 to deny Pacific Coast Energy Company's application to drill almost 100 additional steam fracking (cyclic steam injection) wells, due to numerous unavoidable environmental impacts that would result from the proposal.

I urge you to uphold their decision to deny the project, now that it has been appealed to the Board.

Please continue to move Santa Barbara County in the direction of a 100% renewable energy future by denying Pacific Coast Energy Company's (PCEC's) new steam fracking project.

We need reliable, safe jobs in the renewable energy sector; not hazardous, tenuous employment that can disappear with a decline in global oil prices or with a ruptured pipeline.

Santa Barbara and the Tri-Counties have made an excellent first step in leading our region into the first phase of a 100% renewable Community Choice Energy program. It would be incongruous to also approve the

expansion of one of the dirtiest, most carbon intensive oil projects.

Protect Santa Barbara County from the unavoidable boom and bust cycles associated with an oil-based economy. Help us benefit from the growing renewable energy economy by transitioning us away from oil development.

On behalf of the climate, our economy and our health, I urge you to deny the Pacific Coast Energy Company's proposal, in favor of a swift transition to a clean and prosperous energy future.

Sincerely,

Ms. Pam Brandon

I urge you to uphold their decision to deny the project, now that it has been appealed to the Board.

Please continue to move Santa Barbara County in the direction of a 100% renewable energy future by denying Pacific Coast Energy Company's (PCEC's) new steam fracking project.

We need reliable, safe jobs in the renewable energy sector; not hazardous, tenuous employment that can disappear with a decline in global oil prices or with a ruptured pipeline.

Santa Barbara and the Tri-Counties have made an excellent first step in leading our region into the first phase of a 100% renewable Community Choice Energy program. It would be incongruous to also approve the

expansion of one of the dirtiest, most carbon intensive oil projects.

Protect Santa Barbara County from the unavoidable boom and bust cycles associated with an oil-based economy. Help us benefit from the growing renewable energy economy by transitioning us away from oil development.

On behalf of the climate, our economy and our health, I urge you to deny the Pacific Coast Energy Company's proposal, in favor of a swift transition to a clean and prosperous energy future.

Sincerely,

Ms. Mary Turley

Supervisor - Santa Barbara Board of Supervisors - District 1 Salud
Carbajal
105 East Anapamu Street
Santa Barbara, CA 93101-2000

Dear Supervisor - Santa Barbara Board of Supervisors - District 1
Carbajal,

Thank you in advance for your attention to this very important matter.
On June 29, your Planning Commission voted 3-2 to deny Pacific Coast
Energy Company's application to drill almost 100 additional steam
fracking (cyclic steam injection) wells, due to numerous unavoidable
environmental impacts that would result from the proposal.

I urge you to uphold their decision to deny the project, now that it
has been appealed to the Board.

Please continue to move Santa Barbara County in the direction of a 100%
renewable energy future by denying Pacific Coast Energy Company's
(PCEC's) new steam fracking project.

We need reliable, safe jobs in the renewable energy sector; not
hazardous, tenuous employment that can disappear with a decline in
global oil prices or with a ruptured pipeline.

Santa Barbara and the Tri-Counties have made an excellent first step in
leading our region into the first phase of a 100% renewable Community

Choice Energy program. It would be incongruous to also approve the expansion of one of the dirtiest, most carbon intensive oil projects.

Protect Santa Barbara County from the unavoidable boom and bust cycles associated with an oil-based economy. Help us benefit from the growing renewable energy economy by transitioning us away from oil development.

On behalf of the climate, our economy and our health, I urge you to deny the Pacific Coast Energy Company's proposal, in favor of a swift transition to a clean and prosperous energy future.

Sincerely,

Ms. Megan Grubaums
