Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site History: A historic gasoline service station was located at the site. The site was opened in 2014 when gasoline related soil and groundwater contamination was discovered during a site assessment investigation. Four Underground Storage Tanks were identified as remaining in place in 2014. From October 2014 to January 2015, three 1,000 gallon gasoline tanks, one 7,500 gallon gasoline tank, the former dispenser island, remote fill location, and piping runs were removed. 1,100 pounds of RegenOx was placed in the excavation prior to backfill to treat residual contamination. 186.6 tons of impacted soil were transported offsite for recycling. Groundwater monitoring wells, soil vapor extraction wells, and soil vapor wells were installed in 2015. From November 2015 to January 2016, 11,728 pounds of hydrocarbons were removed via a soil vapor extraction event. 2,783 pounds of Persulfox were injected into the groundwater in February 2016. 1,031 pounds of hydrocarbons were removed during a second soil vapor extraction event in March 2016. In July 2016, eight 70 gallon lubricating oil tanks and one 216 gallon waste oil tank was discovered during site redevelopment. The tanks, along with 65 tons of impacted soil were removed in July and August 2016.

RWQCB Region:	CENTRAL COAST RWQCB (REGION 3)
Site History:	In January 1989, four USTs were removed from the property. Two USTs held stoddard solvent, one UST gasoline, and one UST waste water. Santa Barbara County Fire referred the UST case to the Regional Board on 01/14/94 when dry cleaning solvents (in addition to stoddard solvent) were detected in groundwater. In 1993, Ablitts decided to pump and treat groundwater containing solvents from the building basement. In November 1993, the City issued a permit for Ablitts to discharge treated groundwater to the sanitary sewer. Thru 01/5/09, Ablitts has pumped and treated 6.2M gallons of groundwater since pumping commenced 12/15/93. Concentrations of PCE and TCE have shown a declining trend since 2003. In 2013, Ablitt"s discontinued pumping and conducted one year of sampling to see if solvent concentrations remained low. After one year of sampling, concentrations have not rebounded and remain below or just slightly above Maximum Contaminant Levels. Ablitt's will continue pumping in the building basement only as necessary; the city of Santa Barbara will continue to allow discharge of treated groundwater to the city sewer. The Water Board must be notified if the city stops allowing the discharge.

CA Enviroscreen 4 Score:	60-65%
Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL COAST RWQCB (REGION 3)
Site History:	Remediation feasibility assessment slated for 2022 and potential remediation activities slated for 2023 The site is currently a public parking lot owned by the City of Santa Barbara, but this property was formerly occupied by gasoline service stations, automotive repair shops, and a dry cleaning facility (Coit Drapery Cleaners). The City of Santa Barbara samples ten monitoring wells located within the site. The groundwater depths were measured between 6.82 and 10.85 feet below the top of the well casing. Groundwater flow direction has been to the south to southeast since 2009. The chlorinated solvents tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (DCE), trans-1,2-dichloroethene (DCE), 1,1-dichloroethene (1,1-DCE), 1,1-dichloroethane (1,1-DCA), and vinyl chloride are detected at concentrations exceeding Maximum Contaminant Levels (MCLs) in the groundwater monitoring wells.

Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL COAST RWQCB (REGION 3)
Site History:	A Phase I investigation indicated that an auto repair shop operated at the site from circa 1920 to 1995. Subsurface investigations conducted in 2016 encountered soil impacts consisting of oil range organics to depths of 22 feet below grade under the current building. Structural encumbrances prevented the removal of the impacted soil. The impacted soil is capped by the cement floor of the building and is currently inaccessible to human contact. Constituents of concern were either not detected or below screening levels in soil vapor and groundwater samples. A soils management plan was prepared for the site, which outlines the proper handling of impacted soil that may be encountered in future subsurface work. A Land Use Covenant was recorded for the site. (Document 2017-0042613). The LUC requires the removal of impacted soil if the building is torn down. EDC was detected in one groundwater sample above its MCL. The RWQCB concurred that the extent of this contaminant was limited. 1,2,3-Trichloropropane was detected in both groundwater samples, The RWQCB concurred that this contaminant was liklely related to the upgradient source.

PEP BOYS (Continued) **1000105162**

Barbara County, Central Coast Water Board opened a groundwater case to address chlorinated volatile organic compounds (CVOCs) detected in groundwater beneath the Site, specifically 1,2,3-TCP. Site investigations were implemented between 2007 and 2011 and groundwater monitoring has been ongoing since 2008 (currently under Monitoring and Reporting Program [MRP] R3-2013-0014). In a January 28, 2011 staff letter Central Coast Water Board determined the Site was not appropriate for closure because site conditions did not meet closure criteria consistent with State Water Resources Control Board s (State Water Board) Resolution 92-49 and determined characterization of the lateral and vertical extent of 1,2,3-TCP impacts to groundwater, an updated site conceptual model including potential exposure pathways and receptors, and a proposal for a groundwater cleanup goal based on economic and technological feasibility was required to move forward. On October 13, 2011, ECGW, on behalf of Pep Boys, submitted the Updated Site Conceptual Model report that determined additional characterization of the 1,2,3-TCP plume was required to further delineate the horizontal extent of impacts to groundwater, and that temporal trends in 1,2,3-TCP concentrations would need to be established. On October 28, 2011, the Revised Analysis of Indoor Air Sampling Results report was submitted and reported 1,2,3-TCP was not detected in indoor air samples collected inside the building overlying the plume and concluded no additional indoor air assessment was needed to evaluate the Site for closure. At the time the aforementioned reports were submitted, there was no State Water Board Division of Drinking Water Standard (maximum contaminant level, or MCL) established for 1,2,3-TCP and a cleanup goal was undetermined. Central Coast Water Board issued MRP R3-2013-0014 on February 7, 2013, and in the cover letter we stated Pep Boys had not completely characterized the 1,2,3-TCP plume in the downgradient direction and that we anticipated cost savings from reduced monitoring and reporting would facilitate additional investigation(s) needed to delineate the plume. On July 18, 2017, the State Water Board established an MCL for 1,2,3-TCP at 5 parts per trillion (ppt) . Based on groundwater data submitted in the 2020 Annual Report, 1,2,3-TCP concentrations in groundwater at the Site remain significantly elevated above this standard. Additional offsite assessment is being implemented in 2021. Please refer to the site-specific documentation submitted to the SWRCB's GeoTracker database for additional information.

RWQCB Region:	CENTRAL COAST RWQCB (REGION 3)
Site History:	April 1987 - Cal Trans during freeway widening project, finds #2 redwood USTs in the area of Rey Road & Fish Enterprise Company property. Cal Trans removed the USTs and excavated to 12 ft bgs. Impacts, while likely heating oil, were identified for the life of the project as TPH diesel. June 1987 approx. 460 cubic yards of soil was excavated and disposed of offsite. An unknown volume of free phase diesel and water was removed via pumping into baker tanks and disposal. Additional water removal occurred during Hwy 101 construction dewatering from May 1989 onward. Additional site assessment found impacts estimated at 300 cubic yards of residual impacted soils. FPD granted a Leave-in-place closure 6/24/1999. July 2006 #7 GeoProbe borings were advanced to 20 feet bgs. 7/27/2007 - FPD directive required: delineate extent of soil impacts vertically

and laterally, proivide documentation of soil disposal, provide isoconcentration maps of the residual plume. Estimate the soil mass and volume. Rincon report dated 3/24/2008 provided: 405 cubic yards having 598 gallons of TPH diesel in that volume of soil. Prioir to granting case closure, FPD is requiring: proof of proper MW abandonment, a soil contamination notice be recorded, and an updated case closure summary be submitted. SEE ALSO LUFT#90018 for other related reports. COMPLETE LOP FILE HAS BEEN UPLOADED TO GEOTRACKER WEBSITE - HARD COPIES NO LONGER EXIST IN LOP FILES

RWQCB Region:	CENTRAL COAST RWQCB (REGION 3)
Site History:	3/14/1996 an unknown UST was removed from adjacent to the building (a former hotel built circa 1907 and rebuilt after 1925 earthquake) UST likely held heating oil, which has been analyzed as TPH diesel for the history of the site. 4/4/1996 - 950 gallons impacted water and 42 cu.yds. Removed. 7/16/1996 - Phase II ESA found impacts near and under building - unable to access due to existing building - closed by LUFT. May 2005 - during remodeling and footing excavation work impacted soil and water was found and reported as TPHdiesel. 6/30/2005 - Site assessment conducted to determine if same impacts as in 1996 evaluation. (Other COCs found including recalcitrant compounds in minor concentrations) 10/7/2005 - Site assessment and excavation - removed 1800 cu ft ~ 65.86 tons of soil - verification sidewall samples ranged from 154 - 7280 mg/kg for TPHdiesel.

Docusign Envelope ID: 3773F87A-0B89-4932-BA2C-CA8383B3EEAD

REAGAN RANCH VISITOR'S CENTER (Continued) **S107473011**

7/28/2006 - Phase separated hydrocarbons found in the area. Based upon current & 1993 AET & Caltrans work the site plume is delineated to the N/NW/S/E. 3/24/2008 Environmental Site Assessment Rpt for both 217 & 225 State St found residual mass and volume estimates: 217 State St estimated to have 64.2 gallons of TPH diesel adsorbed into the soil and 0.03 gals in groundwater. FPD is requiring the following: an updated case closure summary, confirmation MWs have been abandoned, may require soil contamination deed notice to be recorded. FPD shall forward this case closure summary to the RWQCB for closure concurrence. This site has been reviewed under the Low Threat Closure Policy and after successful completion of a public notice mailing, shall be closed. CA BOND EXP. PLAN:

Reponsible Party:	BACKLOG SITE CLEANUP PLANNING REPORT
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	This site is scheduled to be remediated by CALTRANS with oversight provided by the County. Therefore, DHS will not budget monies for direct costs related to the project as DHS involvement will be limited to guidance to the County.
Site Description:	This location is part of the I-101 "Crosstown Freeway" upgrade through the City of Santa Barbara. The site is actually a number of sites in this location. The right-of-way site characterization report indicated that five leaking underground fuel tanks exist in the area and that approximately one foot of free gasoline product is floating on top of the ground water.
Hazardous Waste Desc:	Sampling to date has revealed elevated levels of lead, zinc, nickel, arsenic, vanadium and total fuel hydrocarbons at various locations.
Threat To Public Health & Env:	The primary concern is the contamination of the ground water. A secondary concern is the contamination of the soil at the site. Depth to usable ground water is approximately ten feet.
Site Activity Status:	CALTRANS is working on this site as a right-of-way acquisition to the I-101 freeway. The ownership of the site is in transition of CALTRANS, and former owners are unable to finance removal of tanks or cleanup. Value of the property is exceeded by cost of cleanup. The County of Santa Barbara, Environmental Health Department, is performing oversight of the site characterization and cleanup activities.

Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL COAST RWQCB (REGION 3)
Site History:	The Bothin Foundation owned the property for 60 years before the Freeman's purchased it. Caltrans purchased the property December 1, 1987 as part of the Highway 101 expansion project. As of purchase date, Caltrans took all responsiblity for clean-up of the site. While performing soil boring tests in 1985 in anticipation of construction, free product was found in the groundwater. In May 1987, one 10,000-gallon underground storage tank (UST), three 3,000-gal. USTs, and one 500-gal. waste-oil UST were excavated and disposed of. Two additional 1,000-gal. USTs were discovered and removed in January 1988. All tanks were not abandoned properly with the county or with the Water Board. Approximately 4,500 cubic yards of contaminated soil were removed. There is still a 12 foot by 18 foot septic tank on the property; it's condition and contents are unknown. Last Water Board correspondence is November 27, 1990. COMPLETE LOP FILE HAS BEEN UPLOADED TO GEOTRACKER WEBSITE - HARD COPIES NO LONGER EXIST IN LOP FILES See 900561 for more detailed data on old UST locations assessment & removals

Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	This case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action was conducted under the oversight of Santa Barbara County FPD/EHS. This case was closed under the State Water Resources Control Board Low-Threat Underground Storage Tank Case Closure Policy. Please refer to the site specific documentation submitted to the SWRCB s GeoTracker database for additional information. Complete EHS/FPD file has been uploaded to GeoTracker - Hard copies no longer exist in EHS/FPD files.

FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Leak Reported Date:	07/01/1987
How Discovered:	Nuisance Conditions
How Discovered Description:	Not reported
Discharge Source:	Other

Actual:
26 ft.

Docusign Envelope ID: 3773F87A-0B89-4932-BA2C-CA8383B3EEAD

AVIS RENT-A-CAR (Continued) **S105620269**

Discharge Cause:	Unknown
Stop Method:	Close and Remove Tank
Stop Description:	Not reported
No Further Action Date:	08/23/2013
CA Water Watershed Name:	South Coast - South Coast - Santa Barbara (315.32)
Dwr Groundwater Subbasin Name:	Santa Barbara (3-017)
Disadvantaged Community:	Not reported
CA Enviroscreen 3 Score:	51-55%
CA Enviroscreen 4 Score:	70-75%
Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL COAST RWQCB (REGION 3)
Site History:	COMPLETE LOP FILE HAS BEEN UPLOADED TO GEOTRACKER WEBSITE - HARD COPIES NO LONGER EXIST IN LOP FILES

Military DOD Site: No
Facility Project Subtype: Not reported
RWQCB Region: CENTRAL COAST RWQCB (REGION 3)
Site History: Two 6,000 gallon underground gasoline storage tanks (USTs) and associated product lines and dispensers were removed from the site on February 12, 1997. Approximately 20 cubic yards of contaminated soil from the UST pit was stockpiled for disposal. Analysis of compliance soil samples indicated significant residual contamination in the tank pit area. On May 16, 1997, an abandoned product line and approximately 10 yards of contaminated soil were removed from beneath the carwash building during site demolition activities. Impacted soil was also encountered near the former pump islands on the northwest portion of the property. During December 1999 and January 2000, seven borings were drilled and completed as groundwater monitoring or vapor wells. MW1, MW4 and MW5 were completed using 2 diameter PVC casing with a screened interval from 15 to 30 feet below grade (fbg). Vapor extraction wells VEW2 and VEW5 were constructed of 4 diameter PVC casing screened from 5 to 20 fbg. Combination wells MW2/VEW4 and MW3/VEW3 were completed with 4 diameter casing, screened from 9 to 29 feet and 7 to 37 feet below grade, respectively. The new wells were surveyed and developed. In August 2002 three additional offsite monitoring wells (MW6 MW8) were installed, professionally surveyed, and developed. In late 2003, DMI-EMK proposed and implemented interim corrective action to begin remediation of site soil and groundwater contamination. The interim corrective actions consisted of conducting weekly dual-phase groundwater removal and vapor extraction on wells MW1, MW2 and MW3, located in the areas of highest contaminant concentrations. These activities started on December 7, 2003 and were terminated on February 8, 2004. In a letter dated March 22, 2004, FPD directed submittal of a workplan to delineate the groundwater plume and evaluate if commingled plume conditions exist in the vicinity of the site. This work was conducted in June 2006. DMI-EMK submitted details of the proposed remediation system in correspondence dated March 26, 2007. The proposed dual-phase extraction system would extract contaminated groundwater and soil vapor from wells SBMW1, VEW2, and VEW5.

Site History:	This case #900751 is reopening Case# 90075, which was closed on 12/4/2012 under CUF recommendation in accordance with the now active LTCP. This case left residual impacts that could not be accessed due to structural encumbrances. These encumbrances are being removed in July/August 2014 to allow for Flood Control & Corps of Engineers to widen the Mission Creek Channel. The RP requested this case be reopened so EHS could provide oversight of the excavation of the impacted soils. The RP expects to start in Nov. 2014. and the site was closed in July 2015.

RWQCB Region:	CENTRAL COAST RWQCB (REGION 3)
Site History:	This case #518551 is reopening Case# 51855, which was closed on 12/4/2012 under CUF recommendation in accordance with the now active LTCP. This case left residual impacts that could not be accessed due to structural encumbrances. These encumbrances are being removed in June 2014 to allow for redevelopment. The RP requested this case be reopened so EHS could provide oversight of the excavation of the impacted soils. The RP expects to start in Jan. 2015, and the site was closed in July 2015.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Total Actual Hours:	Not reported
Quarterly Update:	SK received ISD on 12/23/81. In 1983, facility requested exemption from Permit requirements. Although, EPA approved this request and allowed SK to withdraw its RCRA permit application on 1/27/83, DHS denied the request. Facility did not pursue a Part B permit and shortly after decided to close in 1985. Although CP was submitted in 1985, the closure verification did not get approved until 1997. For corrective action, WB may have been involved. A site decommissioning report which looks to close out the corrective action activity was submitted on 1/12/93.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

AR253 **EDISON/SANTA BARBARA MGP** **EDR MGP** **1008407773**
North **136 E DE LA GUERRA STREET** **N/A**
1/2-1 **SANTA BARBARA, CA 93101**
0.589 mi.
3112 ft. **Site 1 of 2 in cluster AR**

Relative: **Higher**
Actual: **49 ft.**

EDR MGP:

The site is a former manufactured gas plant (MGP) which processed coal or crude oil to manufacture gas for household consumption. MGPs were operated during the 1900s. Gas production technology depended on the type of raw material used (either coal orr crude oil). Known by-products are lampblack, tar, and oxide wastes. Chemical constituents are primarily polycyclic aromatic hydro- carbons (PAHs), trace levels of volatile organic compounds (VOCs), such as benzene, toluene, ethylbenzene and xylene(BTEX), and heavy metals. Process equipment and its auxiliaries are the most probable location of the contaminants. Contaminants may migrate through dust emission, surface water run-off, and percolation to the subsurface soil. Groundwater, biota, andd humans are potential receptors. The site is currently under the Department's Voluntary Cleanup Program

EDISON/SANTA BARBARA I(DE LA GUERRA) MGP (Continued) **S106568329**

Comments:	DTSC has reviewed and approved the Phase II Remedial Design for the Site. The phase II Remedial Design involve the construction and operation of thne in-site vapor extraction and air/ozone. sparging systems to address the contamination at the Site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation / Feasibility Study
Completed Date:	08/10/1998
Comments:	Based on the Remedial Investigation Report, contamination at the Site extends from shallow soil to the saturated zone soil. Groundwater is impacted with chemicals related to the manufac- tured gas plant operations. A source area of colocated constituents were identified within the location of two (2) gas holders. A Baseline Risk Assessment (BRA) and Feasibility Study (FS) are conducted for the site. The recommended remedial alternatives include shallow soil excavation with offsite recycling, deep zone in-situ soil and groundwater treatment using ozone/air sparging with vapor extraction. Institutional control in the form of a land use covenant will be implemented at the site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	12/06/1995
Comments:	DTSC reviews the Preliminary Endangerment Assessment Report for the Former Santa Barbara I MGP site. The PEA investigation determined that there has been a release of polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and petroleum hydrocarbons at the site. Accordingly, DTSC concurs with the recommendation that additional soil investigation in other areas of the site where elevated concentrations of PAHs were observed be conducted, as well as a groundwater investigation.

Completed Info:

Completed Area Name:	Phase I Excavation
Completed Sub Area Name:	Not reported
Completed Document Type:	Design/Implementation Workplan
Completed Date:	04/29/2002
Comments:	Phase I Remedial Design involves soil excavation in the gas holder area under a huge tent structure.
Completed Area Name:	Phase II - In Situ Ozonation and SVE

Docusign Envelope ID: 3773F87A-0B89-4932-BA2C-CA8383B3EEAD

EDISON/SANTA BARBARA I(DE LA GUERRA) MGP (Continued) **S106568329**

Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 08/12/2002
Comments: DTSC has reviewed and approved the Phase II Remedial Design for the Site. The phase II Remedial Design involve the construction and operation of thne in-site vapor extraction and air/ozone. sparging systems to address the contamination at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 08/10/1998
Comments: Based on the Remedial Investigation Report, contamination at the Site extends from shallow soil to the saturated zone soil. Groundwater is impacted with chemicals related to the manufac- tured gas plant operations. A source area of colocated constituents were identified within the location of two (2) gas holders. A Baseline Risk Assessment (BRA) and Feasibility Study (FS) are conducted for the site. The recommended remedial alternatives include shallow soil excavation with offsite recycling, deep zone in-situ soil and groundwater treatment using ozone/air sparging with vapor extraction. Institutional control in the form of a land use covenant will be implemented at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/06/1995
Comments: DTSC reviews the Preliminary Endangerment Assessment Report for the Former Santa Barbara I MGP site. The PEA investigation determined that there has been a release of polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and petroleum hydrocarbons at the site. Accordingly, DTSC concurs with the recommendation that additional soil investigation in other areas of the site where elevated concentrations of PAHs were observed be conducted, as well as a groundwater investigation.

RWQCB Region:	CENTRAL COAST RWQCB (REGION 3)
Site History:	All site information for this case has been uploaded to this GeoTracker website for public reference (Update from 12/5/2019 correspondence): After a meeting between Towbes, Geosyntec, and Central Coast Water Board staff on April 18, 2018, and follow-up teleconferences, all parties agreed to indoor air sampling events at both the former U-Neat Cleaners property located at 212 E Anapamu Street and the Site to confirm there were no vapor intrusion issues in either building. At the same time, Central Coast Water Board was also evaluating U-Neat and the Site for case closure based on sampling results submitted in 2014 for groundwater and 2016 for soil vapor. After the Closure Request was submitted in February 2019, the Central Coast Water Board administratively closed the U-Neat site on April 9, 2019, because the source of CVOCs at U-Neat originated from historical operations at the Site and there were no elevated indoor air impacts in the former U-Neat building. The Central Coast Water Board has evaluated case closure for this site and finds that it is premature because State Water Resources Control Board s Resolution No. 92-49 directs the Central Coast Water Board to ensure that water affected by an unauthorized release attains either background water quality or the best water quality that is reasonable if background water quality is not feasible. The Central Coast Water Board would only consider case closure if Towbes demonstrates the plume is decreasing in concentration and/or areal extent and is expected to reach background concentrations in a reasonable timeframe. In addition, wastes in all media must be spatially defined (laterally and vertically) on and around the Site. However, groundwater, soil vapor, and indoor air concentrations at the Site are not decreasing and are potentially moving off of the site as discussed below. Soil vapor sampling results submitted May 9, 2018, indicate pollutant concentrations beneath the parking lot have rebounded. For example, PCE concentrations in soil vapor probe SVM-3, sampled at a 5-foot depth, were 7,900 μg/m3 in 2013 and were 26,000 μg/m3 in adjacent soil vapor probe VP-1(also at a 5-foot depth) in 20164. Also, trichloroethylene (TCE) concentrations in soil vapor probe SVM-3 at a 5-foot depth were less than 26 μg/m3 in 2013 and were 9,300 μg/m3 in adjacent soil vapor probe VP-1(also at a 5-foot depth) in 2016. Indoor air sampling results reported in the Closure Request demonstrate that PCE concentrations are higher than 2013 confirmation sampling results. For example, PCE was detected at 0.097 μg/m3 in sample IA-HB09 during 2013 and an order of magnitude higher at 0.94 μg/m3 in sample IA-HB09 during 2019, which exceeds the residential ESL for indoor air. PCE concentrations detected in 2019 were elevated even though there is a mitigation

Docusign Envelope ID: 3773F87A-0B89-4932-BA2C-CA8383B3EEAD

WMSB SOLUTIONS LLC (Continued) **S109521376**

system in place (HVAC modifications), indicating that PCE concentrations could potentially be higher without the system. However, one indoor air sampling event is not conclusive and additional assessment is necessary to evaluate current vapor intrusion pathways. Indoor air mitigation systems that are required to remain in operation at the Site after case closure would need to be addressed in a deed restriction approved by Central Coast Water Board in the event redevelopment or construction work is performed at the Site (not only in the event of a land-use change) that would not otherwise be regulated under existing local institutional controls. Finally, while current land-use screening levels are being met, residential screening levels are not; therefore, a deed restriction would need to be a component of case closure under these circumstances. Groundwater data for monitoring well P-4, a downgradient offsite well, indicates groundwater impacts are migrating off of the site. For example, when Towbes sampled well P-4 last, in 2014, PCE was detected at 2.9 micrograms per liter (μg/L) and the concentrationtrend was decreasing. However, the PCE concentration reported for monitoring well P-4 during a 2019 sampling event was 12 μg/L, and data analysis for ongoing sampling results (post 2014) does not show a decreasing trend. Not only does the elevated concentration of PCE exceed the maximum contaminant level (MCL), but ongoing groundwater sampling by the downgradient site indicates the plume extent is not decreasing. In addition to the elevated impacts to groundwater at the downgradient well, PCE has also been detected in vapor samples collected at the downgradient site s soil vapor extraction (SVE) system, also indicating the CVOC plume could be migrating from site and supporting the need for additional assessment of groundwater at the Site. During a teleconference with Geosyntec on November 6, 2019, GeoSyntec, on behalf of Towbes, withdrew the request for case closure and requested to postpone additional soil vapor sampling. Central Coast Water Board agree that closure is not appropriate for this Site at this time and requires further characterization of all site media to assess residual source area impacts, determine current site conditions, and confirm concentration trends. Towbes must then evaluate any migration of the CVOC plume from the site and recommend an appropriate path to closure for the Site.

Site History:	Former Schauer Printing site and former U-Neat Cleaners site are located at the intersection of Santa Barbara Street and East Anapamu Street in Santa Barbara. In 2004, it was unclear which site could be the source of chlorinated solvents detected in groundwater. In 2009 after receipt and review of soil gas data, the Central Coast Water Board determined that the majority of solvents in groundwater originated from the former Schauer Printing site. Please refer to Schauer Getroacker for information/reports submitted to the Central Coast Water Board since 2009.

Completed Date: 08/11/1993
Comments: The Department received a notice of intent to sue under RCRA and CERCLA. Lambda leased the site from 1966 to 1984 and designed, manufactured, and marketed industrial equipments such as instrumentation for the thin-film industry. During their occupation, Lambda used, stored and disposed of various chemicals. The site's soil and groundwater are contaminated with halogenated organic compounds such as 1,1-dichloroethylene, 1,1-dichloroethane, 1,1,1-trichloro- ethane, 1,2-dichloroethane, and 1,1,2-trichloroethane. RWQCB is currently overseeing the cleanup activities at the site. Therefore, NFA for DTSC.

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	DHS will be issuing a remedial action order or entering into an enforceable agreement with the responsible parties. DHS has budgeted $50,000 for oversight/monitoring of cleanup efforts. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The RPs will pay all costs associated with remedial investigation and cleanup activities.
Site Description:	Manufactured gas was produced onsite from petroleum residue roughly between the years 1900 to 1916. The site was an old "towne gas" facility.
Hazardous Waste Desc:	The wastes are generally characterized as polynuclear or polycylic aromatic hydrocarbons (PNAs or PAHs). Deposits or seams of this tar-like material are found onsite. Constituents of concern include heavy metals, cyanide, benzene, naphthalene, and other semi-volatile and volatile organics.

Docusign Envelope ID: 3773F87A-0B89-4932-BA2C-CA8383B3EEAD

SOUTHERN CALIFORNIA GAS - SANTA BARBARA (Continued) **S100833297**

Threat To Public Health & Env: The primary concern is potential contamination of ground water which is first encountered at approximately 7 feet below surface. Surface soil contamination could potentially migrate offsite in the form of airborne particulates.

Site Activity Status: Southern California Gas is currently initiating site investigations at several "towne gas" sites. They have conducted a limited subsurface investigation to determine levels of contaminants present in soils and ground water at the site.

EDR MGP:

The Southern California Gas Company - Santa Barbara site was the site of a manufactured gas or "towne gas" facility which was active from 1900 to 1916. Crude oil was used as a feedstock to the manufactured gas process. Residues from the gasificationprocess, mainly consisting of a material called "lamp black" were disposed of at the site. The wastes are generally found as seams of tarlike material. "LAMP BLACK" contains varying amounts of a family of compounds called polynuclear or polycyclic arromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semi-volatile organics.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	01/05/1996
Comments:	The Southern California Gas Company conducted trenching activities along the southwestern property line of the site. Samples were collected from the soils that were excavated and stockpiled along side the trench. For the purpose of characterization and proper profiling, the soils were sampled and analyzed for polynuclear aromatic hydrocarbons (PAHs), total petroleum hydrocarbon (TPH) and lead. Based on analytical results, the contaminated soils were characterized as non-RCRA hazardous solid waste, and a total of 12,000 pounds were transported to Kettleman Hills.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 01/05/1996
Comments: The Southern California Gas Company conducted trenching activities along the southwestern property line of the site. Samples were collected from the soils that were excavated and stockpiled along side the trench. For the purpose of characterization and proper profiling, the soils were sampled and analyzed for polynuclear aromatic hydrocarbons (PAHs), total petroleum hydrocarbon (TPH) and lead. Based on analytical results, the contaminated soils were characterized as non-RCRA hazardous solid waste, and a total of 12,000 pounds were transported to Kettleman Hills.

CA Enviroscreen 4 Score:	70-75%
Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	CENTRAL COAST RWQCB (REGION 3)
Site History:	The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by FPD. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. Please refer to the site-specific documentation submitted to the SWRCB's GeoTracker database for additional information. One remaining well 2-DM-8 needs to be properly abandoned prior to issuing a closure letter for this site. Access with the property owner of the adjacent parcel where the well is located was not able to be achieved when the field work was performed for the other wells.

Site History: Site History The Southern California Gas Company - Santa Barbara site was the site of a manufactured gas or "towne gas" facility which was active from 1900 to 1916. Crude oil was used as a feedstock to the manufactured gas process. Residues from the gasification process, mainly consisting of a material called "lamp black" were disposed of at the site. The wastes are generally found as seams of tarlike material. "LAMP BLACK" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semi-volatile organics. Possible receptors of contamination are workers onsite. The potential for migration of contaminants to groundwater is very low. Dermal contack, soil ingestion, or air exposure are mini- mized due to the site beign predominantly paved and limited site access. Past activities at the site include removal of an underground tank and collection of soil samples. The Department of Health Services (DHS) issued a Remedial Action Order to the Southern California Gas Company. The Order specified the steps necessary to adequately characterize the site and determine the remedial alternatives that were best suited for the site. The Department of Toxic Substances Control (DTSC), formerly DHS, oversaw all activities related to the Order. Excavation and low temperature thermal desorption (LTDD) of contaminated soil was selected as the remedial alternative for the site. The LTTD systen thermally dissolves organic compounds from contaminated soils without heating the soil to combustion temperatures. Soils which contained PAH concentrations statistically above 50 mg/kg in analytical tests were processed through the termal desorption unit and backfield onsite. The risk based cleanup levels for the onsite worker under the industrial use scenarios were 42 mg/kg for carcinogenic PAHs and 42,000 mg/kg for non-carcinogenic PAHs. Groundwater monitoring continues on a quarterly basis. The First Annual Inspection of Asphalt Cap was done and the first Yearly Monitoring Report and Inspection Summary Report was submitted to DTSC on August 16, 1996.

Background Info:

Groundwater monitoring continues on a quarterly basis. The First Annual Inspection of Asphalt Cap was done and the first Yearly Monitoring Report and Inspection Summary Report was submitted to DTSC on August 16, 1996.

The Southern California Gas Company - Santa Barbara site was the site of a manufactured gas or "towne gas" facility which was active from 1900 to 1916. Crude oil was used as a feedstock to the manufactured gas process. Residues from the gasification process, mainly consisting of a material called "lamp black" were disposed of at the site. The wastes are generally found as seams of tarlike material. "LAMP BLACK" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semi-volatile organics.

Not reported

Possible receptors of contamination are workers onsite. The potential for migration of contaminants to groundwater is very low. Dermal contact, soil ingestion, or air exposure are minimized due to the site beign predominantly paved and limited site access.

Not reported

Past activities at the site include removal of an underground

Docusign Envelope ID: 3773F87A-0B89-4932-BA2C-CA8383B3EEAD

SOUTHERN CALIFORNIA GAS CO (Continued) **S101594106**

tank and collection of soil samples.
Not reported
The Department of Health Services (DHS) issued a Remedial Action Order to the Southern California Gas Company. The Order specified the steps necessary to adequately characterize the site and determine the remedial alternatives that were best suited for the site. The Department of Toxic Substances Control (DTSC), formerly DHS, oversaw all activities related to the Order.
Not reported
Excavation and low temperature thermal desorption (LTDD) of contaminated soil was selected as the remedial alternative for the site. The LTTD systen thermally dissolves organic compounds from contaminated soils without heating the soil to combustion temperatures. Soils which contained PAH concentrations statistically above 50 mg/kg in analytical tests were processed through the termal desorption unit and backfield onsite.
Not reported
The risk based cleanup levels for the onsite worker under the industrial use scenarios were 42 mg/kg for carcinogenic PAHs and 42,000 mg/kg for non-carcinogenic PAHs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

UST FINDER RELEASE: UST Finder Releases Database

US EPA’s UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA’s Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Version Date:	2022

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

Docusign Envelope ID: 3773F87A-0B89-4932-BA2C-CA8383B3EEAD

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

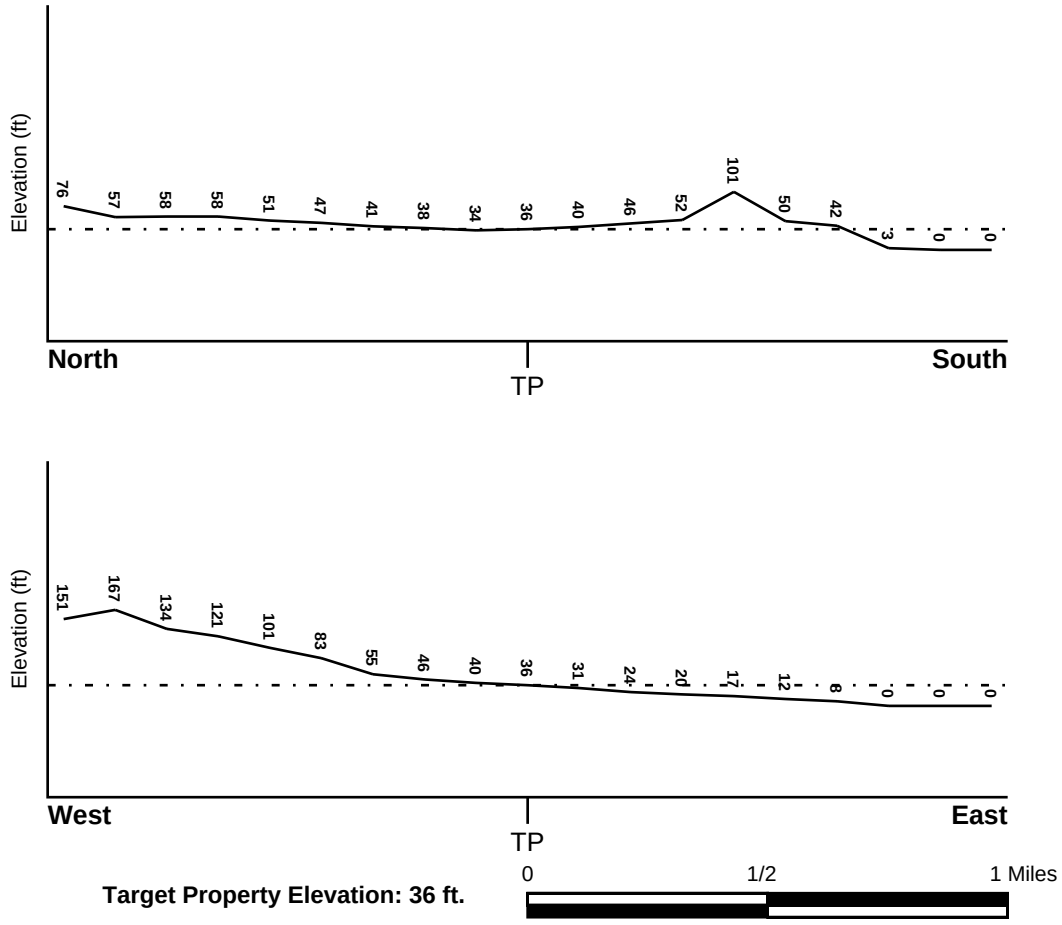
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 36 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

Docusign Envelope ID: 3773F87A-0B89-4932-BA2C-CA8383B3EEAD

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

SANTA BARBARA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Goleta

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	29 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.8 Min: 6.6
2	29 inches	40 inches	loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.8 Min: 6.6
