Dear Supervisors,

I urge you to ban fracking in Santa Barbara County.

The process of hydraulic fracturing (fracking) can deplete and contaminate local water, damage the environment and threaten public health.

Energy companies want to increase oil production in Santa Barbara County by engaging in fracking processes. This poses serious risks to the county. In other areas where energy companies have begun fracking, we've seen a range of problems. These have included flames exploding from kitchen taps, livestock and wildlife dying from tainted water, 24-hour a day truck traffic and declining property values near wells. Not only that, but people have complained of blackouts, headaches and foul air.

Fracking puts Santa Barbara County's tourism and agriculture industries, our drinking water and the health of residents at unacceptable levels of risk. It also poses a serious threat to property values. Please support a fracking ban in Santa Barbara County.

I look forward to hearing from you about your stance on this important issue.

Dear Supervisors,

I urge you to ban fracking in Santa Barbara County.

The process of hydraulic fracturing (fracking) can deplete and contaminate local water, damage the environment and threaten public health.

Energy companies want to increase oil production in Santa Barbara County by engaging in fracking processes. This poses serious risks to the county. In other areas where energy companies have begun fracking, we've seen a range of problems. These have included flames exploding from kitchen taps, livestock and wildlife dying from tainted water, 24-hour a day truck traffic and declining property values near wells. Not only that, but people have complained of blackouts, headaches and foul air.

Fracking puts Santa Barbara County's tourism and agriculture industries, our drinking water and the health of residents at unacceptable levels of risk. It also poses a serious threat to property values. Please support a fracking ban in Santa Barbara County.

I look forward to hearing from you about your stance on this important issue.

Dear Supervisors,

I urge you to ban fracking in Santa Barbara County.

The process of hydraulic fracturing (fracking) can deplete and contaminate local water, damage the environment and threaten public health.

Energy companies want to increase oil production in Santa Barbara County by engaging in fracking processes. This poses serious risks to the county. In other areas where energy companies have begun fracking, we've seen a range of problems. These have included flames exploding from kitchen taps, livestock and wildlife dying from tainted water, 24-hour a day truck traffic and declining property values near wells. Not only that, but people have complained of blackouts, headaches and foul air.

Fracking puts Santa Barbara County's tourism and agriculture industries, our drinking water and the health of residents at unacceptable levels of risk. It also poses a serious threat to property values. Please support a fracking ban in Santa Barbara County.

I look forward to hearing from you about your stance on this important issue.

Dear Supervisors,

I urge you to ban fracking in Santa Barbara County.

The process of hydraulic fracturing (fracking) depletes and contaminates local water, damaging the environment and threatening public health. Just this week the Arkansas Oil and Gas Commission placed a ban on fracking wastewater wells in central Arkansas after geologists determined that the practice had set off thousands of minor earthquakes (less than 4.7 magnitude).

Energy companies want to increase oil production in Santa Barbara County by engaging in fracking processes. This poses serious risks to the county, including tapwater spontaneously igniting, the death of livestock and wildlife from tainted water, 24-hour a day truck traffic and declining property values near wells. Not only that, but people have complained of blackouts, headaches and foul air.

Fracking puts Santa Barbara County's tourism and agriculture industries, our drinking water and the health of residents at unacceptable levels of risk. It also poses a serious threat to property values. Please support a fracking ban in Santa Barbara County.

I look forward to hearing from you about your stance on this important issue.

Dear Supervisors,

I urge you to ban fracking in Santa Barbara County.

The process of hydraulic fracturing (fracking) can deplete and contaminate local water, damage the environment and threaten public health.

Energy companies want to increase oil production in Santa Barbara County by engaging in fracking processes. This poses serious risks to the county. In other areas where energy companies have begun fracking, we've seen a range of problems. These have included flames exploding from kitchen taps, livestock and wildlife dying from tainted water, 24-hour a day truck traffic and declining property values near wells. Not only that, but people have complained of blackouts, headaches and foul air.

Fracking puts Santa Barbara County's tourism and agriculture industries, our drinking water and the health of residents at unacceptable levels of risk. It also poses a serious threat to property values. Please support a fracking ban in Santa Barbara County.

I look forward to hearing from you about your stance on this important issue.

Subject: Ban Fracking in Santa Barbara

Flag Status: Blue

Dear Supervisors,

I urge you to ban fracking in Santa Barbara County.

The process of hydraulic fracturing (fracking) can deplete and contaminate local water, damage the environment and threaten public health.

Energy companies want to increase oil production in Santa Barbara County by engaging in fracking processes. This poses serious risks to the county. In other areas where energy companies have begun fracking, we've seen a range of problems. These have included flames exploding from kitchen taps, livestock and wildlife dying from tainted water, 24-hour a day truck traffic and declining property values near wells. Not only that, but people have complained of blackouts, headaches and foul air.

Fracking puts Santa Barbara County's tourism and agriculture industries, our drinking water and the health of residents at unacceptable levels of risk. It also poses a serious threat to property values. Please support a fracking ban in Santa Barbara County.

I look forward to hearing from you about your stance on this important issue.
