To whom it may concern. Liberty is defined as such: the state of being free within society from oppressive restrictions imposed by authority on ones life, behavior and political views.

Medical freedom is a liberty worth fighting for. We oppose the mandates for faculty, staff and the students. Less than half the population think that mandates for children to have a mandatory covid-19 vaccine is ok. We do NOT think that Gavin Newsom nor the Santa Barbara Unified School District are acting in the goodwill or majority of how the parents feel on this subject and hence are infringing on our liberties.

Many oppose the mandates stop pretending like so many don't.

Sincerely, Chloe Kendall

Dear Supervisors,

Monday, October 18th, is a day to remember: Monday was a day when thousands across California united in a stand for medical freedom. We saw peaceful protests from San Diego to Sacramento and everywhere in between. Thousands of parents, teachers, employees, from all walks of life took a stand to voice dissent and join the tens, if not hundreds, of thousands across America who are tired of oppression and tyranny. Their message: Stop the mandate. Supervisors, this situation has reached a new extreme. We are fighting for our liberties. Tens of thousands of taxpayers are prepared to leave California if this mandate is not stopped. What will become of this state when there is a mass exodus?

Across the globe, there is this narrative that The Shot will save us all, yet we are seeing that this is not the case. Israel had the highest vaccination rate in the world and yet somehow their infection rate skyrocketed. How?? It's simple: the vaccines are not as effective as Big Pharma wants us to believe. Studies are showing that the limited protection the vaccines offer diminishes over the course of just a few months, and does not provide protection for quickly emerging variants. A true vaccine, such as measles, rubella, etc., provides near-100% immunization for the lifetime of the recipient, not to mention, takes years to develop and study for efficacy and safety. The EUA shots available in the United States are simply not there yet.

At last week's meeting, Supervisor Hartmann claimed that ivermectin is a drug used only in veterinary medicine to treat horses; that is absolutely false. Ivermectin is an FDA approved drug for use in humans to treat a variety of parasitic infections as well as other conditions (source: [drugs.com/ivermectin.html](https://www.drugs.com/ivermectin.html)). Ivermectin, in conjunction with vitamin C, zinc and vitamin D, has been safely and successfully used to treat COVID-19 in humans. This option should be available to those who choose a treatment other than the EUA vaccines.

Supervisors, we implore you: please stand up to this mandate and fight for our - and your - medical freedom.

Thank you,  
Nicholle Montalvo

My comment goes to the entire board but specifically to Dr. Reyonoso.

It is your your job to know the exact numbers of vaccine injury in Santa Barbara county. How can you make an informed decision regarding forced vaccination if you do not take responsibility for this data? I gave you and the entire board opportunity to explore the 5 cases of vaccine injury that I am aware of just among my friends. I invited you to come with me and meet the injured. They are willing to share their story. You can connect with their doctors. NONE of you even responded to my invitation.

What happens to those you force to vaccinate to keep their employment or education intact when they get injured?

Will they be forgotten? Disregarded like my incredible, vibrant, loving, and kind friends? Will you acknowledge their injury?

What type of individual forces something on a whole group of people without fully investing the risks that come with it? Many of us know these individuals in our community who are injured who've served us and our kids for years and we have a very valid reason not to want that injury for ourselves or our kids.

The word doctor is derived from the Latin word teacher. A teacher, at least only the very best of teachers, are in a continuous state of learning... Dr. Reyonoso, If you are not willing to learn from those around you when it does not serve the narrative or outcome you desire, then my question is what kind of Doctor are you?

I'd hope you are willing to reflect on this question so you can better influence a balanced view moving forward to not only the board, but the entire community you are beholden to. I'll be taking Lia a meal tomorrow evening, once again- I openly invite you to join me.

Thank you,  
Erin Chadwick
