

Amendment to Scope of Work (SOW) for Santa Barbara County Contract with Colorado Customware Inc.

As additional scope has been identified after final contract signing, this SOW document shall serve as a general outline for that work. Santa Barbara County will add an additional module to the RealWare application already purchased. The additional software known as Matix, formally GeoWare, from CCI will serve as an enhanced GIS (geographic information system) data visualization and valuation tool to be used in conjunction with RealWare. Users will be presented with a map view and data view. The map view provides state-of-the art multi-layer map rendering, navigation and polygon selection. Within this view, the user can easily generate task-specific visualizations using choropleths, bubble charts, and icon and text label overlays. The data view contains a powerful and flexible data grid where associated data for the selected polygons is shown.

Implementation services will include: installation, connection to existing ArcGIS Map Services, integration configuration with existing legacy system, configuration for custom theming-modeling, training, and on-going support.

This module will have a separate accelerated timeline from the already established original contract for Realware. The estimated timeline is approximately one (1) to two (2) month of installation, configuration, and training to commence after board approval.

Additional costs are outlined in the Amendment to Exhibit A – Price / Payment Schedule.
