Santa Barbara Board of Supervisors Salud Carbajal

Dear Santa Barbara Board of Supervisors Carbajal,

As a Defender of Wildlife and a resident of Santa Barbara, I am writing to urge you to deny the Pacific Coast Energy Company's oil drilling project.

The project, situated in the environmentally sensitive Orcutt Hills of northern Santa Barbara County, endangers one of the most biologically diverse locations in California - an area that is home to several rare plant and animal species, including the federally protected California Tiger Salamander.

There are already 96 wells on the Orcutt Oil Field, and the area has a history of accidents - to date, there have been 100 uncontrolled oil seeps - seeps that inundate and ruin the homes of California wildlife. If the plan is allowed to move forward, the California Department of Fish and Wildlife predicts another 225 seeps in the next 25 years!

Approving this plan goes against the County's comprehensive conservation plans and policies - and the county's Planning Commission already denied this project once.

The uncertain short-term benefits of approving this plan cannot begin to compare to the significant negative consequences for Santa Barbara's water quality, air quality and wildlife habitat.

As California residents, we should be proud of the hard work our state has done to reduce our greenhouse gas emissions - but developing fossil fuel drilling in a project like this will negate the progress that we've made.

It is imperative that the Santa Barbara County Board of Supervisors deny the Pacific Coast Energy Company's oil drilling project.

Thank you for your consideration,

Ms. Sue McKnight

I would also ask the question about their choice of Environmental Consultants. Dianna Beck is only 5 years out of school, has only worked in that area (SLO/SB, and frankly would be naive. There is too much talent out there to hire someone with so little experience.

My comments revolve around PCEC's viability to prevent, and/or clean up, any pollution/contamination resulting from existing as well as proposed expansions of their operations in this old Unocal oil field. As an aside: The bankruptcy developments by Venoco in Goleta blocked the City of Goleta from acting on their plans. Mr. Breitenbach is already using bankruptcy in Breitburn Energy, see reference below.

Here is information from the PCEC as well as Breitburn Energy Partners websites - the connection is Randy Breitenbach. Also if you go to the email link for Jim Bray (Public & Government Affairs) you go to his email address at Breitburn.

From PCEC's website:

Randall H. Breitenbach

Randall H. Breitenbach co-founded PCEC and serves as Chief Executive Officer and Chairman of the Board of Directors. Randy also co-founded BreitBurn Energy Company and BreitBurn Energy Partners, serving as Co-Chief Executive from 1988 to 2012. He currently serves as Vice Chairman of the Board of Directors. Randy also served as Chairman of Stanford University's PIC Endowment and is currently a member of the Renewable Energy Investment Committee. Randy also serves as a Trustee and is currently Chairman of the Governance and Nominating Committee for Hotchkis and Wiley Funds, a mutual funds company.

Randy holds both a B.S and M.S. degree in Petroleum Engineering from Stanford University and an M.B.A. from Harvard Business School.

From Breitburn Energy's website:

Breitburn IPO

While Washburn and Breitenbach saw continued opportunities to expand, they also needed access to long-term capital to fund the company's growth. Because BEC's business model—generate predictable cash flow by acquiring and developing long-lived, low-decline oil and gas properties—was less risky than that of a traditional exploration and production company, Washburn and Breitenbach decided to take a portion of the company public as a master limited partnership. Breitburn Energy Partners LP (Breitburn) successfully completed its IPO in October 2006, listing as BBEP on the NASDAQ. Washburn and Breitenbach were named co-CEOs. In 2008, Breitburn acquired all of the interests previously owned by Provident.

In 2012, Randy Breitenbach retired as President of Breitburn and was appointed Vice-Chairman of Breitburn's Board of Directors. Hal Washburn continues to serve as CEO of Breitburn.

In November 2014, Breitburn completed the largest transaction in company history by acquiring QR Energy, LP.

Commodity prices began a prolonged slide, however, in 2014 which placed significant financial stress on the oil and gas industry. While Breitburn's long-lived, low-decline portfolio of diverse assets performed in line with its expectations, the lower-for-longer downturn in commodity prices made its existing debt burden unsustainable. As a result, on May 15, 2016, Breitburn (and its affiliates) filed voluntary petitions for relief under Chapter 11 of the U.S. Bankruptcy Code to facilitate the restructuring of Breitburn's balance sheet. Click [here](#) to view our restructuring page.

BACKGROUND

On May 15, 2016, Breitburn Energy Partners LP and certain of its affiliates voluntarily filed petitions for relief under Chapter 11 of the U.S. Bankruptcy Code to facilitate the restructuring of its balance sheet.

Breitburn expects to continue its operations without interruption, and cash from its operations, cash on hand, and a \$75 million debtor-in-possession financing facility (DIP Financing Facility) will provide Breitburn with more than adequate liquidity to fund its operations during the restructuring

process. Breitburn’s DIP Financing Facility lenders have offered to arrange an additional \$75 million of DIP financing at Breitburn’s request.

Hal Washburn, Chief Executive Officer, said, “During the restructuring process, we will continue managing our business and operating our assets as we do today. Cash from our operations, cash on hand, and cash available under the DIP Financing Facility will provide us with more than sufficient funds to operate our business during the restructuring process. We look forward to working with our service providers, suppliers, vendors, customers, and partners to ensure that Breitburn emerges from the restructuring process a stronger company.”

Subject: PCEC appeal

Dear Supervisors,

Please deny PCEC's appeal and support the Planning Commission's decision to protect our County from further damage from PCEC's oil seeps and spills.

None of the "new information" presented by PCEC at the last hearing avoids or significantly decreases the projects numerous Class I impacts to endangered species, habitat or water quality.

The project's questionable benefits like short term construction jobs are heavily outweighed by its significant impacts. A few jobs are no compensation for the health and safety risk and environmental damage from this project.

PCEC's oil project is one of the dirtiest and riskiest oil operations in the County with 99 uncontrolled oil seeps and 24 oil spills. If the project or any alternative is approved by the Board, the seeps and spills will continue.

This is a bad project and I ask that you please protect the public by denying the PCEC appeal.

Sincerely, Barbara Massey
Goleta, CA 93117

Santa Barbara Board of Supervisors Salud Carbajal

Dear Santa Barbara Board of Supervisors Carbajal,

As a Defender of Wildlife and a resident of Santa Barbara, I am writing to urge you to deny the Pacific Coast Energy Company's oil drilling project.

The project, situated in the environmentally sensitive Orcutt Hills of northern Santa Barbara County, endangers one of the most biologically diverse locations in California - an area that is home to several rare plant and animal species, including the federally protected California Tiger Salamander.

There are already 96 wells on the Orcutt Oil Field, and the area has a history of accidents - to date, there have been 100 uncontrolled oil seeps - seeps that inundate and ruin the homes of California wildlife. If the plan is allowed to move forward, the California Department of Fish and Wildlife predicts another 225 seeps in the next 25 years!

Approving this plan goes against the County's comprehensive conservation plans and policies - and the county's Planning Commission already denied this project once.

The uncertain short-term benefits of approving this plan cannot begin to compare to the significant negative consequences for Santa Barbara's water quality, air quality and wildlife habitat.

As California residents, we should be proud of the hard work our state has done to reduce our greenhouse gas emissions - but developing fossil fuel drilling in a project like this will negate the progress that we've made.

It is imperative that the Santa Barbara County Board of Supervisors deny the Pacific Coast Energy Company's oil drilling project.

Thank you for your consideration,

Ms. Jill Stassinis
1760 Ocean Oaks Rd

Subject: Pacific Coast Energy Company's New Wells Request

Dear Mr. Carbajal,

You are my supervisor from Santa Barbara, so I am writing to you regarding Pacific Coast Energy's request to allow additional well drilling near Orcutt.

The Sierra Club has come out strongly against this initiative. They say that Pacific Coast has an appalling history of oil seeps, and negative impact to water, habitat, and air quality. Their "cyclic steam extraction" seems very similar to what is commonly called fracking, which most of us view negatively.

I am writing to ask you to take the Sierra Club's recommendation to deny their revised permit seriously. They have a remarkable history to conservation, and I trust what they say very much. You can, too.

Thank you,

Bob Faulkner

Subject: Deny PCEC's appeal

Dear Supervisor Salud Carbajal,

I urge you to DENY PCEC's appeal, and support the Planning Commission's decision to protect our County from likely further damage from PCEC's oil seeps and spills.

1. PCEC's oil operations have resulted in 99 uncontrolled oil seeps and 24 oil spills. If the project or any alternative is approved by the Board, the seeps and oil spills will likely continue.
2. None of PCEC's "new information" presented at the last hearing avoids or significantly decreases the projects numerous Class I impacts to endangered species, habitat or water quality.
3. The project's uncertain benefits, like short-term construction jobs, do not come close to outweighing its significant impacts on our environment and limited water resources.

Sincerely,
Susan Rice

Good Morning,

Attached please find the Community Environmental Council's Comment Letter on the PCEC Project which will be considered at tomorrow's BOS meeting.

Please direct any questions to me.

Thanks,

Jefferson Litten

Santa Barbara County Board of Supervisors
123 E. Anapamu Street, Fourth Floor
Santa Barbara, CA 93101
E-MAIL: sbcob@co.santa-barbara.ca.us

Honorable Supervisors:

The Community Environmental Council (CEC) has a 46 year-history of developing solutions to our region's environmental challenges and engaging in sound planning and advocacy to protect the region and the planet's natural resources. As such, CEC urges the Board to uphold County Staff's recommendation to deny the Pacific Coast Energy Company's (PCEC) appeal of the Planning Commission's June 29th denial.

In reviewing this project, CEC agrees with the Planning Commission's evaluation of the project presented in the Board Letter which accompanied the October 11th hearing:

The findings for denial conclude that uncertain benefits of the project do not outweigh the significant environmental impacts the project will cause, that the site is not able to accommodate additional oil and gas production and that the development is not in conformance with the applicable provisions of the County's Land Use Development Code and Comprehensive Plan. The Commission's findings are supported by evidence in the record and adequately substantiated by facts. (CEC emphasis).

CEC agrees with the Planning Commission's findings that the environmental impacts of the project exceed any potential economic benefits that the project may offer. With regards to proposed alternatives, the October 11th Board Letter notes that under the Careaga Exclusion Alternative, "seeps would likely continue to occur," though the frequency of seeps may decrease. Given the noted uncertainty around the reduction of impacts under this alternative, CEC does not support the Careaga Exclusion Alternative. CEC does, however, support the Seep Can Only Alternative and supports certifying the supplemental EIR for this alternative (Case No. EIR-00000-00001).

Beyond the noted biological and habitat impacts, CEC is concerned about the energy and greenhouse gas (GHG) intensity of the proposed PCEC project. Enhanced oil-extraction techniques such as cyclic steaming are among the most GHG-intensive extraction technologies currently in use.

In light of global atmospheric carbon dioxide concentrations recently exceeding 400 ppm and the Intergovernmental Panel on Climate Change (IPCC) proclaiming that "Scientific Evidence for warming of our planet is unequivocal," CEC advocates for a rapid transition away from carbon intensive energy sources and extraction techniques towards clean renewable energy sources and sustainable transportation systems.

Thank you for your consideration.

Sincerely,

Sigrid Wright

Dear Honorable Supervisors,

I urge you to DENY PCEC's appeal, and support the Planning Commission's decision to protect our County from further damage from PCEC's oil seeps and spills.

1. PCEC's oil project is one of the dirtiest and riskiest oil operations in the County – last year PCEC was #1 in the County for oil spills.
2. PCEC's oil operations have resulted in 99 uncontrolled oil seeps and 24 oil spills! If the project or any alternative is approved by the Board, the seeps and oil spills will continue.
3. None of PCEC's "new information" presented at the last hearing avoids or significantly decreases the projects numerous Class I impacts to endangered species, habitat or water quality.
4. The project's uncertain benefits, like short-term construction jobs, do not come close to outweighing its significant impacts.
