Subject: The mobile home market in rent controlled California is crashing.

Greetings:

In taking on the science of economics head on California's governments have created one of the great studies in economics. Only a fool would buy a mobile home in California, I'm finishing off any financing for mobile homes. No financing, no appraised price. Virtually every argument for rent control is bogus. Go to the internet if you did not take a basic economics course. It is common knowledge at this time that price (rent) controls are bad.

Read on the internet: THE END OF RENT CONTROL BEGINS . . .
