Subject: Covid conclusions

Caution: This email originated from a source outside of the County of Santa Barbara. Do not click links or open attachments unless you verify the sender and know the content is safe.

I am a retired engineer that has been following the science and looking at all the data and arguments on Covid.

Covid is a very mild disease if you have a good immune system or are under 18. Long term care facilities should be shut down, but nothing else.

Cloth masks do more harm than good and should never be worn. Best to just be outside or be in well ventilated spaces.

Everyone should be taking supplemental vitamin D. The darker your pigment the more you should be taking.

Ivermectin should be taken on first symptom

Vaccines should be optional. For most people they are now higher risk than the disease itself.

Sincerely,

David Madajian
