Subject: I Support the New Plan for Goleta Beach

Dear Supervisors,

I support "Goleta Beach 2.0" as an innovative plan to protect and enhance Goleta Beach County Park. The Parks Department's new plan preserves and expands the beach by over an acre! It adds recreational facilities like kayak rentals and trails and removes the unpermitted rock seawalls which damage the beach.

By relocating the sewer and utility lines out of the "critical erosion zone" the plan is a long-term solution. The County's sewer line should be moved all the way back to Highway 217 to avoid future sewage spills on the beach and avoid the need to consider a controversial "backstop revetment" seawall which would damage the beach.

Goleta Beach 2.0 protects the Park and the environment and is far less costly than prior proposal which have been rejected by the Coastal Commission.

I urge you to support Goleta Beach Park and direct staff to pursue all options to move the sewer line further inland.

Subject: Support Goleta Beach 2.0

Dear Supervisor Wolf,

I have been actively involved both personally and as a member of Surfrider Foundation Santa Barbara Chapter in the controversy over the best way to preserve and protect Goleta Beach County Park for over 10 years. In addition it is one of my own personal favorite local parks and one that I use very frequently all year long. I believe that Goleta Beach 2.0- which was crafted by a team of coastal scientists and engineers and peer-reviewed by other engineers and geologists- represents the best compromise yet and the best plan we will ever see which can actually pass muster with the Coastal Commission. I believe it balances the needs of the community and the needs of the commercial interests quite nicely. It will protect the beach itself, it will actually increase recreational opportunities for the vast majority of county residents and regular Goleta Beach users and do so at less financial cost than almost any of the other alternatives.

This plan is based on the most up-to-date and sound science and will protect and enhance Goleta Beach Park while also protecting the sandy beach by over an acre.

I urge you take not only support Goleta Beach 2.0 but take a strong lead in seeing to it that it gets approved and implemented.

Respectfully

Kenneth and Alexandra Palley

Subject: Support Goleta Beach 2.0

Dear Supervisors:

I wish to thank the office of Supervisor Wolf for mailing of the copy of the County Parks Department power point program for "Goleta Beach 2.0." It was very much appreciated.

Since we all reside in beautiful Santa Barbara County I am happy to support Goleta Beach 2.0 and my Santa Barbara friends who ask your Board to consider the benefits of moving the sewer line and other utilities and improving Goleta Beach Park. In addition to the power point document sent they have provided the following information concerning Goleta Beach 2.0 described as the County Parks Department's new plan that increases the beach by over an acre. Several innovative ideas have been forwarded such as removing the County's sewer and utility lines away from what is termed the "critical erosion zone", thus avoiding sewage spills and removing the need to employ a "backstop revetment", considered a controversial measure.

It is seen that Goleta Beach 2.0 protects the park as well as the environment and, as to cost, is substantially less costly than the prior proposal, which it is understood was rejected by the Coastal Commission.

Beaches create many memories. My childhood beach went out forever at low tide and afforded an opportunity for clamming. At high tide the water lapped at the rocks where we built bonfires to toast marshmallows. How fortunate Santa Barbara is to have a beach to which they can tend.

With kindest regards,

Sincerely,

Lillian Smith

Subject: Goleta Beach Park

Dear Supervisors,

In light of the hearing next week, I would like to register my support for the plan known as "Goleta Beach 2.0." The expansion of the park, preservation of its key features, and protection of the environment that would result make the plan an excellent choice. Cost savings and avoidance of the damaging environmental consequences that result from seawalls count as additional benefits.

The opportunity arises also to move the sewer line to Route 217, completely away from the beach where it presently brings the risk of sewage spills.

I very much hope to learn that the Board votes to instigate Goleta 2.0 and to removal of the sewer line as above.

Sincerely,

Maria Gordon

Comments by Dr. E.A. Keller,
Professor Environmental Studies and Earth Science, UCSB
Subject: **Goleta Beach Long-term Protection Plan**

Background

I am Professor of Environmental Studies and Earth Science at UC Santa Barbara where I been employed since 1976. I served as Chair of the Environmental Studies program for seven years. My research efforts with my graduate students are divided into three areas: 1) studies of Quaternary stratigraphy and tectonics as they relate to earthquake hazard active folding and mountain building processes; 2) study of river process, and fish habitat in the chaparral environment in southern California; and 3) studies of coastal processes of coastal lagoons in the Santa Barbara area. I am knowledgeable of the coastal processes, which shape beaches. I have taught a course in beach processes for years and have written several books that discuss coastal processes. I am qualified to speak as an expert regarding coastal erosion and sediment transport processes.

Statement

I support the new Goleta Beach 2.0 concept because it is the right project at the right time. It is more consistent with my past views of how to manage beaches than prior proposals to protect Goleta Beach County Park. Analysis done for prior proposals were flawed and failed to account for a variety of conditions at Goleta Beach. The dominant wave energy comes from the northwest and periodically produces large waves from storms, particularly during El Nino years. Development of the new Goleta Beach 2.0 plan initially in 2008 by Philip Williams and Associates as the Park Reconfiguration Alternative is based on the best available science. The strong point is that it anticipates variable ocean, coastal and storm conditions, including El Nino events.

The new approach to protecting Goleta Beach Park impact is based on Dr. David Revell's paper (referenced in the Beach Stabilization Project 2006 draft EIR), which identifies the flow of sand at Goleta Beach, which varies over several decades with cycle of the Pacific Decadal Oscillation and El Nino events. The historical record demonstrated by Revell shows the cyclical nature of beach widening and narrowing related to the sand supply and transport. Goleta Beach may be entering a natural widening. In future years it may narrow again but these natural changes can be planned for. Rock revetments, groins and other hard structures are known to interfere with sand movement and sea walls (rock revetments) over decades can and often do reduce beach width. What is sure to happen with a rock revetment is that they will limit access to the beach. A rock is difficult to climb down, is unsightly and is not appropriate for a beach park that is visited by people who wish a beach experience.

Protect Utility Lines and Parking by Moving Them

Goleta Beach 2.0 will maintain a more natural beach, allowing beach processes change with time. The movement of utilities, restrooms and parking lots away from expected

coastal erosion that might occur over a period of decades is an example of proactive beach management, and I would move them as far back as possible.

Future Actions: East End of Park

The east portion of the park is an area of particular public concern. I believe the eastern end parking lot should be removed and returned to a more natural landscape allowing the mouth of the slough to naturally migrate with the flow of sand along the beach. It will migrate mostly to the east toward More Mesa as that is the dominant direction of sand flow along the coast. The slough mouth is the most scenic part of Goleta Beach Park, but now it is spoiled by a parking lot protected by revetments. The parking lot and revetments, built to protect the parking lot degrades Goleta Slough. In my opinion, the eastern end of the sand spit, the slough mouth and lower slough should be a natural environment where people could learn about observe coastal and wetland processes. A non-intrusive visitors center could be located there where children and others could learn about our coastal resources. It could be an attraction rather than the scenic distraction it is today.

Parking spaces would be further reduced, but alternatives are possible. It has been my observation that a parking shortage only occurs the days when the beach is heavily used. During those days I believe there should be some additional parking away from the beach perhaps, out of the park with a shuttle service. It is poor management to place parking lots in scenic areas of high public value. People at other Southern California beaches park their cars then walk to the beaches, and it seems to be working. The County's plan includes a drop off place for people to let people off and then provide parking, closer perhaps to the airport. This is a sound approach to managing Goleta Beach.

I object to construction of a hidden "backstop" rock revetment or sea wall approximately 50 feet back from the beach. In my estimation this is not an appropriate expenditure of money. If we implement Goleta Beach 2.0 we will observe over a period of years that there will be periodic erosion and deposition on the beach. During some years the erosion may appear unacceptable—that is the time to remember the long-term goal of maintaining the beach. Periodic beach nourishment following storm and beach erosion is by far less costly than a rock revetment that will require expensive maintenance. The study by Revel and Griggs (2005) published in *Shore and Beach* is correct then periodically Goleta Beach will receive a pulse of sediment that will lead to natural widening of the beach. Other times the beach will experience erosion and narrow. Spending large amounts of money for a hidden (buried) sea wall doesn't make much sense to me. As sea levels rises (and it will by perhaps a foot or so this century, the beach will migrate inland). What we need to do now is anticipate change over say 50 to 100 years and at least make a value judgment of what we would like Goleta Beach to be like in the more distant future. Some day there may be a raised bridge across the entire area from sea cliff to sea cliff across the entire inlet. The beach in 2100 may even be landward of Highway 217, but there will be a beach; that is unless we choose to destroy Goleta Beach by trying to save it. The sand spit we call Goleta Beach, even as it has been modified over many decades by fill and development, is one of the few dynamic places along our coast where change is normal and necessary. We have a responsibility to future generations to insure places such as Goleta Beach are part of their future.

Summary

I favor Goleta Beach 2.0 over previous suggested projects, but not including a backstop rock revetment at the west end and not including the eastern revetment. Maintaining these revetments will add significant expense of the project and should large waves attack the beach they probably would erode past the rock revetment (buried or not) as other sea walls have. Furthermore it seems to be a waste of money to plan to excavate a large area and bury a sea wall under Goleta Beach 2.0. Once a seawall is placed it is almost never removed, but commonly is replaced over a period of years by bigger, more expensive seawalls. Seawalls never are constructed to save a beach. They are built to protect coastal development. Sometimes that is critical, but not for a beach park with high scenic value.

In closing, I endorse Goleta Beach 2.0 but without the backstop revetment. Please direct your staff to pursue Goleta Beach 2.0 less the backstop revetment. Please direct staff to recommend that utility lines be moved as far inland as possible. This will ensure that Goleta Beach 2.0 is a long-term cost effective solution for Goleta Beach Park.

Re: Support for Goleta Beach 2.0

Dear Chairwoman Wolf and Supervisors,

I am a UCSB Restoration Ecologist and a local Santa Barbara resident for the past 10 years. I am writing to urge your support for Goleta Beach 2.0. Goleta Beach 2.0 is a new approach to preserving and enhancing Goleta Beach Park. The Coastal Commission voted 9-1 to deny the permeable pile groin last year over concerns that proposal would cause beaches to narrow and bluffs to erode more rapidly. A new approach is needed and Goleta Beach 2.0 is just that. The County Parks Department staff should be thanked for developing such a progressive, scientifically-strong plan to protect our Goleta Beach Park while also protecting the beach. The County's prior plan for Goleta Beach – the permeable groin – would have shifted the erosion to other areas like More Mesa. It would have fought nature and cost millions of dollars. In the end it would have damaged our beaches. The Coastal Commission denied the groin project for that reason. Goleta Beach 2.0 works with nature. It increases the size of Goleta Beach by an acre. It plans ahead by moving parking and utility lines from the critical erosion zone to where they will be safer. I love to take my loved ones to the beach. Goleta Beach is most special because of the "beach". My family wants to see Goleta Beach Park protected in a way that respects, preserves and enhances the beach. That is why we support Goleta Beach 2.0. The County should move the utility lines further inland to Highway 217. This will avoid a long, costly argument amongst stakeholders about whether to build a revetment or seawall in front of the utility lines. Moving the lines back further is proper planning. Why move them back only part way when they can be moved all the way out of the critical erosion zone and protected long into the future? In closing, please support Goleta Beach 2.0 to preserve and enhance our Park and protect the Beach and its natural beauty.

Sincerely,

David Harris

Subject: Goleta Beach Enhancement Plan

Honorable County Supervisors:

I was an intern on this project for the Environmental Defense Center while attending law school. My role included interviewing many UCSB geology professors and getting their point of view on what should be done in regards to Goleta Beach Park erosion issues. Taking into account my knowledge obtained from interviewing the professors, memorandums which I drafted regarding the geology professor interviews and all the additional work that has been put into coming up with a viable and sensible solution to the erosion problem, I am supporting Goleta Beach 2.0 and am hopeful that the Board of Supervisors will lend their support to this plan.

Please support "Goleta Beach 2.0." It is an innovative plan to protect and enhance Goleta Beach County Park. The Parks Department's new plan preserves and expands the beach by over an acre! It improves bicycle circulation, adds kayak rentals, trails and other recreational improvements, and it removes the unpermitted rock seawalls which damage the beach. The plan is a long-term solution which relocates the County's sewer line, the gas line and other utility lines out of the "critical erosion zone". The County's sewer line should be moved all the way back to Highway 217 to avoid future sewage spills on the beach and avoid the need to consider a controversial "backstop revetment" which would damage the beach. Goleta Beach 2.0 protects the Park and the environment and is far less costly than prior proposals which have been rejected by the Coastal Commission.

We urge you to support Goleta Beach Park and to direct your staff to pursue all options to move the County's sewer line further inland.

Sincerely, Mike

Supervisor Janet Wolf
Second district Office
105 East Anapamu St., 4th Floor
Santa Barbara, CA 93101

Dear Supervisor Wolf,

I have been actively involved both personally and as a member of Surfrider foundation Santa Barbara chapter in the controversy over the best way to preserve and protect Goleta Beach County Park for over 10 years. In addition it is one of my own personal favorite local parks and one that I use very frequently all year long. I believe that *Goleta Beach 2.0* – which was crafted by a team of coastal scientists and engineers and peer-reviewed by other engineers and geologists- represents the best compromise yet, and the best plan we will ever see which can actually pass muster with the Coastal Commission. I believe it balances the needs of the community and the needs of the commercial interests quite nicely. It will protect the beach itself, it will actually increase recreational opportunities for the vast majority of county residents and regular Goleta Beach users and do so at least financial cost than almost any of the other alternatives.

This plan is based on the most up-to-date and sound science and will protect and enhance Goleta Beach Park while also protecting and expanding the sandy beach by over an acre.

I urge you to not only support *Goleta Beach 2.0* but to take a strong lead in seeing to it that it gets approved and implemented.

Respectfully

Kenneth and Alexandra Palley
