**Subject:** Next G cell antennas

July 19, 2010

Santa Barbara County Board of Supervisors:

I am writing to express my extreme concern about NextG's plan to install wireless cellular antennas next to our homes and schools throughout Santa Barbara County.

**These cell antennas represent a real and significant threat to our communities on multiple fronts, aesthetics, property values, and health being but three of the most important.**

Currently, the County Ordinance allows cell antenna installations next to homes and schools without any neighborhood oversight or control. Indeed, **some antennas have already been installed within Public Utility Easements on homeowners' properties with no notification to the homeowner and without their consent.** Because these antennas and related equipment represent a visual blight and raise serious health concerns, it has been conclusively shown that the presence of a cell antenna on or near a property can reduce that property's value by 15% or more. Thus, I strongly believe that cell antennas need to be sited very carefully to protect the best interests of the community. **Further, residents should have the right to determine whether a cell tower or antenna is installed on their own property.**

I am aware that the applications submitted by NextG to install cell antennas throughout our county represent but the first wave of such installations. Should NextG be permitted unfettered license to install antennas wherever they see fit, it will inevitably open the door to other companies who wish to do the same thing. This means that we could soon be seeing these antennas going up on literally any and all utility poles throughout our county, and we, the residents, will have absolutely no say in the matter.

**This kind of antenna proliferation would drastically change the way our streets and neighborhoods look and feel, and to allow it is tantamount to permitting outside corporate control over community property values and aesthetics. The County has the right and duty to regulate installations of this kind based on aesthetics and protection of property value.**

**I beseech the Board to act NOW, before it is too late. Please vote to deny NextG's permits on August 3rd, 2010.**

These cell antennas represent a real and significant threat to our communities on multiple fronts, aesthetics, property values, and health being but three of the most important.

Currently, the County Ordinance allows cell antenna installations next to homes and schools without any neighborhood oversight or control. Indeed, some antennas have already been installed within Public Utility Easements on homeowners' properties with no notification to the homeowner and without their consent. Because these antennas and related equipment represent a visual blight and raise serious health concerns, it has been conclusively shown that the presence of a cell antenna on or near a property can reduce that property's value by 15% or more. Thus, I strongly believe that cell antennas need to be sited very carefully to protect the best interests of the community. Further, residents should have the right to determine whether a cell tower or antenna is installed on their own property.

I am aware that the applications submitted by NextG to install cell antennas throughout our county represent but the first wave of such installations. Should NextG be permitted unfettered license to install antennas wherever they see fit, it will inevitably open the door to other companies who wish to do the same thing. This means that we could soon be seeing these antennas going up on literally any and all utility poles throughout our county, and we, the residents, will have absolutely no say in the matter.

This kind of antenna proliferation would drastically change the way our streets and neighborhoods look and feel, and to allow it is tantamount to permitting outside corporate control over community property values and aesthetics. The County has the right and duty to regulate installations of this kind based on aesthetics and protection of property value.

I beseech the Board to act NOW, before it is too late. Please vote to deny NextG's permits on August 3rd, 2010.

This letter is to inform you that I oppose the installation of a wireless SmartGrid meter at my home. I do not want to be exposed to the wireless radiofrequency/microwave radiation from the meter, the security and hacking risks, the potential fire hazard from the meter, or the electromagnetic interference with electronics and medical devices - nor do I want any more cell antennas in my neighborhood.

I will not opt-in to the Southern California Edison Company program by installing power transmitters inside my home on my home appliances, to report energy usage to SCE.

---

The California Public Utilities Commission should require SCE to conduct additional economic studies that take into account various percentages of people who will NOT join this program. SCE has stated that it's current 'base case' requires compliance by the public in placing radiofrequency radiation transmitters inside their homes. SCE says the SmartGrid project will cost \$1.6 billion dollars of ratepayer money (for 5 million new wireless meters). This is a waste of ratepayer money if people decline to participate due to health and safety or trespass reasons.

Very sincerely,

Vicky Linker

Currently, the County Ordinance allows cell antenna installations next to homes and schools without any neighborhood oversight or control. Indeed, **some antennas have already been installed within Public Utility Easements on homeowners' properties with no notification to the homeowner and without their consent.** Because these antennas and related equipment represent a visual blight and raise serious health concerns, it has been conclusively shown that the presence of a cell antenna on or near a property can reduce that property's value by 15% or more. Thus, I strongly believe that cell antennas need to be sited very carefully to protect the best interests of the community, and that residents should have the right to determine whether a cell tower or antenna is installed on their property.

I am aware that the applications submitted by NextG to install cell antennas throughout our county represent but the first wave of such installations. Should NextG be permitted unfettered license to install antennas wherever they see fit, it will inevitably open the door to other companies who wish to do the same thing. This means that we could soon be seeing these antennas going up on literally any and all utility poles throughout our county, and we, the residents, will have absolutely no say in the matter.

**This kind of antenna proliferation would drastically change the way our streets and neighborhoods look and feel, and to allow it is tantamount to permitting outside corporate control over community property values and aesthetics. The County has the right and duty to regulate installations of this kind based on aesthetics and protection of property value.**

**I beseech the Board to act NOW, before it is too late. Please vote to deny NextG's permits and their appeal on August 3, 2010.**

July 27, 2010

Dear Santa Barbara County Board of Supervisors:

I am writing to express my extreme concern about NextG's plan to install wireless cellular antennas next to our homes and schools throughout Santa Barbara County, and my particular concern about the proposed site of an antenna on Santa Rosa Lane by our family's house at 270 Santa Rosa Lane.

These cell antennas represent a real and significant threat to our communities on multiple fronts, aesthetics, property values, and health being but three of the most important.

Currently, the County Ordinance allows cell antenna installations next to homes and schools without any neighborhood oversight or control. Indeed, some antennas have already been installed within Public Utility Easements on homeowners' properties with no notification to the homeowner and without their consent. Because these antennas and related equipment represent a visual blight and raise serious health concerns, it has been conclusively shown that the presence of a cell antenna on or near a property can reduce that property's value by 15% or more. Thus, I strongly believe that cell antennas need to be sited very carefully to protect the best interests of the community. Further, residents should have the right to determine whether a cell tower or antenna is installed on their own property.

I am aware that the applications submitted by NextG to install cell antennas throughout our county represent but the first wave of such installations. Should NextG be permitted unfettered license to install antennas wherever they see fit, it will inevitably open the door to other companies who wish to do the same thing. This means that we could soon be seeing these antennas going up on literally any and all utility poles throughout our county, and we, the residents, will have absolutely no say in the matter.

This kind of antenna proliferation would drastically change the way our streets and neighborhoods look and feel, and to allow it is tantamount to permitting outside corporate control over community property values and aesthetics. The County has the right and duty to regulate installations of this kind based on aesthetics and protection of property value.

**Please vote to deny NextG's permits on August 3rd, 2010.**

This letter is to inform you that I oppose the installation of a wireless SmartGrid meter at my home. I do not want to be exposed to the wireless radiofrequency/microwave radiation from the meter, the security and hacking risks, the potential fire hazard from the meter, or the electromagnetic interference with electronics and medical devices - nor do I want any more cell antennas in my neighborhood.

I will not opt-in to the Southern California Edison Company program by installing power transmitters inside my home on my home appliances, to report energy usage to SCE.

The California Public Utilities Commission should require SCE to conduct additional economic studies that take into account various percentages of people who will NOT join this program. SCE has stated that it's current 'base case' requires compliance by the public in placing radiofrequency radiation transmitters inside their homes. SCE says the SmartGrid project will cost \$1.6 billion dollars of ratepayer money (for 5 million new wireless meters). This is a waste of ratepayer money if people decline to participate due to health and safety or trespass reasons.

Very sincerely,

Name

City or County of California

**This kind of antenna proliferation would drastically change the way our streets and neighborhoods look and feel, and to allow it is tantamount to permitting outside corporate control over community property values and aesthetics. The County has the right and duty to regulate installations of this kind based on aesthetics and protection of property value.**

**I beseech the Board to act NOW, before it is too late. Please vote to deny NextG's permits on August 3rd, 2010.**

Santa Barbara County Board of Supervisors:

I am writing to express my extreme concern about NextG's plan to install wireless cellular antennas next to our homes and schools throughout Santa Barbara County. I oppose the general project, and have specific concerns regarding the proposed installation at **Santa Rosa Lane**. As a homeowner on Santa Rosa Lane, and a concerned citizen of Santa Barbara, I urge you to please consider the following points.

**These cell antennas represent a real and significant threat to our communities on multiple fronts, aesthetics, property values, and health being but three of the most important.**

Currently, the County Ordinance allows cell antenna installations next to homes and schools without any neighborhood oversight or control. Indeed, **some antennas have already been installed within Public Utility Easements on homeowners' properties with no notification to the homeowner and without their consent.** Because these antennas and related equipment represent a visual blight and raise serious health concerns, it has been conclusively shown that the presence of a cell antenna on or near a property can reduce that property's value by 15% or more. Thus, I strongly believe that cell antennas need to be sited very carefully to protect the best interests of the community. **Further, residents should have the right to determine whether a cell tower or antenna is installed on their own property.**

I am aware that the applications submitted by NextG to install cell antennas throughout our county represent but the first wave of such installations. Should NextG be permitted unfettered license to install antennas wherever they see fit, it will inevitably open the door to other companies who wish to do the same thing. This means that we could soon be seeing these antennas going up on literally any and all utility poles throughout our county, and we, the residents, will have absolutely no say in the matter.

**This kind of antenna proliferation would drastically change the way our streets and neighborhoods look and feel, and to allow it is tantamount to permitting outside corporate control over community property values and aesthetics. The County has the right and duty to regulate installations of this kind based on aesthetics and protection of property value.**

I beseech the Board to act NOW, before it is too late. Please vote to deny NextG's permits on August 3rd, 2010.
